## XENION:

Pilot your Xenion XE-11 fighter over hostile enemy planets in order to rid the galaxy of evil. Hordes of alien attack ships will try to stop you in the air. Watch out for cyclops cannons and tanks which will fire at you from the ground. And beware, mother ships will appear and try to finish you off. You can pick up smart bombs from the planet and use them in your fight against the enemy. Scores of screens of detailed terrain make this a great game for everyone.

64 k CoCo 1 or 2 and joystick required. Tape or Disk.

**\$29.95 U.S.  
\$37.95 Can.**

## MEDIEVAL MADNESS:

You have been asked by the King of a mysterious land to rescue his daughter, the fair Princess, from the clutches of an unknown evil! Armed only with your crossbow, you set out into the unknown land on your quest. As you enter the mysterious land you find yourself surrounded by swarms of odd creatures that inhabit the land. You take aim, and fire. A direct hit! The monster slowly fades away, leading you to believe something magical controlled the hideous creature. You press forward not knowing what will appear next. MEDIEVAL MADNESS our second light phaser game has many detailed playing screens and loads of monsters to keep you playing for hours. Multiple skill levels increase the difficulty of the game and make it fun for the beginner or advanced player. Can you rescue the princess? Only time will tell!

Medieval Madness Game, Phaser & Interface  
**\$29.95 U.S.  
\$37.95 Can.**

## THE RAT GRAPHIC DESIGN PACKAGE:

This is the most complete graphics design package currently available for the Coco 3. It supports 320 x 200 hi-res graphics mode with 16 color use definable palette. You can draw lines, circles, ovals, boxes, polygons and many more standard drawing functions. You can get stamps from the screen which can then be enlarged, shrunk, rotated, inverted and flipped and then be redisplayed on the screen in various ways. You can paint areas of the screen in one of the pre-defined color textures or define your own custom textures. You can label your pictures with one of the pre-defined fonts or define your own custom font. How don't worry about trying to draw your picture with the keyboard or even a cumbersome joystick. The Rat comes with its own MOUSE. Yes that's right. It comes with a MOUSE and not a simple analog one button mouse. Ours is a high quality digital two button mouse like you would find on a more expensive computer like the Tandy 1000. You don't have to worry about selection squares around the icons on your drawing screen just push a button on the mouse and it selects your drawing mode. Or you can use one of our pull down menus to load and save your pictures on disk. We also include screen print routines for many of the most popular printers.

Now that's a GRAPHIC DESIGN PACKAGE that beats them all! That's right, you get the graphics program, screen print routines, the mouse and the mouse pad all for one low price of...

## BACK TALK

*Editor:*

I was a bit dismayed by Richard Esposito's answer to Elbert Jenkins in the September '88 "Doctor ASCII" column [Page 138]. He infers that Mr. Jenkins' problem with writing to the *VIP Library* disk has to do with copy protection. This is not the case at all! Mr. Jenkins finds zero grants available on the disk because the "leftover" room on the disk has been disabled by placing a value in the GAT pointing to this area. Primarily, this is done to prevent writing to the master disk and possibly crashing it. Mr. Jenkins could (on a backup) use his *VIP Disk Zap* to find a full granule that is open and place \$FF in the GAT at the byte pointing to that granule. Then he could save his program to the disk.

D.S. Ricketts  
Boring, OR

## REVIEWING REVIEWS

*Editor:*

I am very fond of *VIP Writer III* and thought that I should add a couple of comments to Ms. Willoughby's nice review of it. The customizer program is apparently much more extensive than indicated in the review. It not only configures *VIP Writer III* with the screen width, line width, screen and printer margins, baud rate, parallel or serial printer driver, etc., it also has three programmable function keys so that they are available as soon as you boot up the program. Ms. Willoughby mentions the use of the CLEAR key as a "control key," just like the old *Writer*. The CTRL key serves the same purpose now, so you have a control key on both sides! Ms. Willoughby didn't like the partial saving of the text if the cursor wasn't at the top of the file — I consider that little feature a *vital* asset because many times I need to save only a portion of the buffer. And, as stated in the review, *VIP Writer III* does tell you that you have done only a partial save — in text and with a loud *bong*. Finally, when overstriking a line of text and going past the end of that line, all you have to do is press BREAK to take out the newly inserted line and simply delete anything necessary.

D.S. Ricketts  
Boring, OR

## INFORMATION PLEASE

*Editor:*

I run a 24-track studio and own three CoCos for music production and would like to know if anyone out there has a patch or modification for Radio Shack's *Audio Spectrum Analyzer* for the CoCo 3.

Michael Bridges  
Germantown Recording Studio  
1209 Ave. N.  
Nashville, TN 37208

## HINTS & TIPS

*Editor:*

I recently ruined my Multi-Pak Interface by trying to upgrade it myself, so I wound up buying a new one. In Marty Goodman's "CoCo Consultations," July '88 [Page 146], Marty said that Tandy was not selling CoCo 3-compatible Multi-Paks. I wrote Tandy and was told that the discontinued Multi-Paks were the ones with the satellite board installed. So, if you are thinking about buying a new Multi-Pak for the CoCo 3, first look in the port that plugs into the CoCo. If you see a small satellite board, the Multi-Pak is upgraded. If not, you will need to upgrade.

I have also heard that the new Multi-Paks have a small side effect. When you turn off your CoCo, sometimes the drive motor comes on. This is due to noise being introduced into the Multi-Pak through the CoCo. If this happens, press reset, or turn both the CoCo and the Multi-Pak off and on again.

John Cleveland  
Lunenburg, Nova Scotia

## A Memory Aid

*Editor:*

Since my purchase of ADOS and *Sub-Battle Simulator*, I have had to memorize several commands for each of my command keys. Instead of memorizing the commands for each program, I have made several placards, which frame my keyboard. On these placards — one for each program — I have written the functions of the various keys either next to the key or in the margin. Poster board, manila folder, etc., could be used to make the placards, and you can make as many as you need.

Also, as a member of the printing industry, I was quite impressed with

your May and June covers. I think that they are the best covers you've printed to date. I think the coated paper cover for the July issue and the decision to seal the magazine in plastic were great ideas. Sealing the magazine in plastic not only protects the product, but it also looks sophisticated.

Craig Bathurst  
Greenville, SC

## KUDOS

*Editor:*

I live in New Zealand and have been operating a Color Computer for about four years. I own a CoCo 3. As a teacher, I find my computer an invaluable aid to preparing work for my pupils. Unfortunately, the CoCo is no longer sold in this country, and all necessary computer purchases must be ordered from various places in the United States. I write to thank you for your impressive publication and to offer some advice to others in my situation.

THE RAINBOW is a must for anyone in an isolated situation. The ads and the reviews really help users to choose the best software for their needs. I have had to purchase a lot of software since I upgraded to my CoCo 3, and every issue of RAINBOW tempts me to purchase more. While I have been more than happy with most of my purchases, there are occasional problems. The general rule seems to be that the more you pay for software, the better it is.

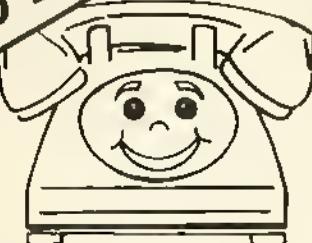

Another tip I must pass on to others in my situation concerns mail order suppliers. There is nothing more nerve-wracking than to order an expensive or delicate item by phone and then to wait as the weeks tick by, peering hopefully into the mailbox every day. I have ordered from many suppliers and would like to recommend those who have provided excellent and reliable service.

Computer Plus heads my list. It provides friendly and reliable service of the first order. Microcom Software can also be relied upon, and Micro World is another firm that provided regular first rate service.

Thank you, RAINBOW, for providing a contact with the rest of the CoCo Community.

Phil Burt  
North Canterbury, New Zealand

RUNS ON  
COCO 2 & 3

**AUTOTERM**  
TURNS YOUR COLOR COMPUTER INTO THE  
**WORLD'S SMARTEST TERMINAL!**

YOU'LL ALSO USE AUTOTERM FOR SIMPLE WORD PROCESSING & RECORD KEEPING

**EXTRA FEATURES ON COCO 3 DISK**

80 char. screen, 2400 baud thru serial port,  
95,000 to 475,000 character buffer.

**EASY COMMUNICATION**

Full prompting and error checking. Step-by-step manual has examples. Scroll text backward and forward. No split words on screen or printout. Save, load, delete files while on line. Print, save all or any part of text. 300 or 1200 baud. All 128 ASCII characters. Works with D.C. Hayes or any modem. Screen widths of 32, 40, 42, 51, 64.

**DISK VERSION SUPPORTS RS232 PAK, XMODEM and SPLIT SCREEN FOR PACKET RADIO.**

Please hire the mentally retarded.  
They are sincere, hard working and  
appreciative. Thanks!

Phyllis.

**+ WORD PROCESSING +**

Editing is super simple with the cursor. Find strings instantly too! Insert printer control codes. Specify page size and margins. Switch quickly between word processing and intelligent terminal action. Create text, correct your typing errors; then connect to the other computer, upload your text or files, download information, file it, and sign-off; then edit the receive data, print it in an attractive format, and/or save it on file. Compatible with TELEWRITER.

CASSETTE \$29.95

DISKETTE \$39.95

Add \$3 shipping and handling  
MC/VISA/C.O.D.

**+ TOTAL AUTOMATION**

Advanced system of keystroke macros lets you automate any activity, such as dial via modem, sign-on, interact, sign-off, print, save. Perform entire session. Act as message taker. At start-up, disk version can automatically set parameters, dial, sign-on, interact, read/write disk, sign-off, etc. Timed execution lets AUTOTERM work while you sleep or play. No other computer can match your COCO's intelligence as a terminal.

**PEN PALS**

• I am a 17-year-old grade 12 student at St. Jerome's High School in Kitchener and would like to have pen pals from anywhere, but preferably close so we can meet sometimes. I have a 64K CoCo 2, one disk drive, a tape recorder and a DMP-130A printer. I like writing special-purpose programs and would like to help anyone with problems.

Anton Peter Milardovic  
8 Smetana Dr.

Kitchener, ON, Canada N2B 3B8

• I am a 16-year-old male and would like to hear from anyone in the United States. I prefer someone around my age, but I will answer anyone. I have a 64K CoCo 2, CoCo 3, disk drive, cassette recorder, Multi-Pak, DMP-130, RS Speech & Sound Pak and Orchestra 90. I am interested in music, graphics, machine language, Adventures and games.

Orman Beckles  
45 Meridian St.  
Malden, MA 02148

• I am a 20-year-old man looking for pen pals who have a CoCo 2 or 3. My system includes a CoCo 3, 501 disk drive, cassette recorder and DMP-105 printer. My other interests are sports, baseball-card collecting and photography. I will answer all replies.

Charles Braude  
69-10 Yellowstone Blvd.  
Forest Hills, NY 11375

• I am 14 years old. I have a CoCo 3 and my hobbies are freestyle skateboarding and swimming. I love to listen to music and watch movies. I would like for a girl my age or older to answer my letter, but if anyone else writes, I'll answer as many as possible.

Timothy W. Smith  
Rt. 1 Box 147  
Leland, NC 28451

• I am 13 years old and would like some pen pals from all over the world. I own upgraded CoCos 1 and 2, a DMP-105, FD 502 and a Multi-Pak Interface. I love Adventure games and science. I will answer all letters — no age limits.

Juli Williams  
Star Rt. 24-2A  
Graford, TX 76045

• I am 16 years old and looking for pen pals aged 14 to 21. I am interested in everything about my computer. I have a 64K CoCo 2, one FD 500 drive and a DMP-110. I welcome letters from all over the world.

Bednarek Lue  
Hanebergstr. 62  
3960 Beverlo  
Belgium

• I am 16 years old and interested in a pen pal. All letters will be appreciated.

Christie Goedert  
Rt. 3 Box 265  
Stockton, MO 65785

**THE RAINBOW** welcomes letters to the editor. Mail should be addressed to: Letters to Rainbow, The Fultsoft Building, P.O. Box 385, Prospect, KY 40059. Letters should include the writer's full name and address. Letters may be edited for purposes of clarity or to conserve space.

Letters to the editor may also be sent to us through our Delphi CoCo SIG. From the CoCo SIG> prompt, type RAI to take you into the Rainbow Magazine Services area of the SIG. At the RAINBOW> prompt, type LET to reach the LETTERS> prompt and then select Letters for Publication. Be sure to include your complete name and address.

## Computer Uses — You Decide

**M**y all-time favorite computer story is about the friend who came over many years ago, to look at my new Color Computer.

It was hooked up to a television set (that being the monitor) in our spare bedroom — somewhat affectionately known as the “blue room” since the walls were painted blue and there was a blue carpet on the floor — and sat in regal splendor on a roll-top desk I had bought several years before.

“What does it do?” he asked.

Since this was a 4K Color Computer (the largest amount of memory at the time) with BASIC built in, and since I had just taught myself some very basic BASIC, I did some simple things like changing the color of the screen, making the computer count to 100 very quickly and the like.

Even then, I am afraid, I was into toys. My friend had been through several crazes, suffered through explanations of why this or that was the greatest thing since sliced bread, and watched and waited as I grew tired of them. I am sure he viewed the computer as “Lonnie’s latest toy” and viewed my enthusiasm with skepticism.

After a half-hour demonstration, he asked me one simple question: “But how do you ask it questions and get answers?”

“You don’t,” I replied. “It only gives you back what you have put into it.”

“Well, what good is it?” he asked. “I want answers to questions.”

Today my friend has two computers in his house. One is a Color Computer; the other is a Tandy 1000.

I am relating this story because this is our November issue and you can do a friend of yours a favor by telling him or her about your computer.

(continued on Page 14)

# Word Power 3.2

More Versatile • More Powerful With  
Spooler • Calculator • Split-Screen • 2-Column Printing

**Unparalleled Power** packed in this 100% ML Word Processor written from scratch for the CoCo 3! No other word processor offers such a wide array of features that are easy to learn & use.

## DISPLAY & SPEED

Word Power 3.2 runs at double-clock speed and uses the **true 80-column display** with lowercase instead of the graphics screen. The result is lightning fast screen reformatting and added speed! All prompts are displayed in

plain English in neat colored windows. The current column number, line number, page number, percentage of free memory is displayed at all times. Even the page break is displayed so you know where one page ends and the other begins. The Setup program allows you to change fore/background colors as well as (in)visible carriage returns. Word Power 3.2 can be used with RGB/Composite/Monochrome monitors as well as TV.

## MAXIMUM MEMORY

Word Power 3.2 gives you over 72K on 128K and over 450K on 512K CoCo 3 for Text Storage - more memory than any other CoCo word-processor. Period.

## EFFORTLESS EDITING

Word Power 3.2 has one of the **most powerful and user-friendly full-screen editor with word-wrap**. All you do is type. Word Power takes care of the text arrangement. The unique Auto-Save feature saves text to disk at regular intervals for peace of mind.

Insert/Overstrike Mode (Cursor Style Changes to indicate mode); OOPS Recall during delete; Type-ahead Buffer for fast typers; Key-Repeat (adjustable); Key-Click; 4-way cursor and scrolling; Cursor to beginning/end of text, beginning/end of line, top/bottom of screen, next/previous word; Page up/down; Delete character, previous/next word, to beginning/end of line, complete line, text before/after cursor; Locate/Replace with Wild-Card Search with auto/manual replace; Block Mark, Unmark, Copy, Move & Delete; Line Positioning (Center/Right Justified); Set/Reset 120 programmable tab stops; Word-Count; Define Top/Bottom/Left/Right margins & page length. You can also highlight text (underline-with on-screen underlining, bold, italics, superscripts, etc.). Word Power even has a **HELP** screen which can be accessed any time during edit.

## SPLIT-SCREEN EDITING

Splits the screen in half so you can view one portion of your text while you edit another. You'll love it!

## MAIL-MERGE

Ever try mailing out the same letter to 50 different people? Could be quite a chore. Not with Word Power 3.2! Using this feature, you can type a letter, follow it with a list of addresses and have Word Power print out personalized letters. It's that easy!

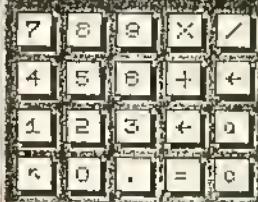

MICROCOM SOFTWARE 2900 Monroe Ave, Rochester, NY 14618. Ph: (716) 383-8830

All orders \$50 & above shipped by UPS 2nd Day Air at no extra charge within US. We accept Visa, MasterCard, Amex, Check or MO. Sorry, no CODs. Please add \$3 S&H (USA/CANADA); except where specified otherwise; Foreign 10% S&H (minimum \$5). New York State residents please add sales tax. Looking for new software/hardware.

To Place Credit Card Orders Call Toll Free 1-800-654-5244 9am-8pm Monday-Saturday

Order Status, Information, Technical Information, call 716-383-8831

537.82

## CALCULATOR

Pop-up a 4-function calculator while you edit! Great for tables!

## SAVING/LOADING TEXT

Word Power 3.2 creates ASCII format files which are compatible with almost all terminal/spell-checking & other word-processing programs. Allows you to Display Free Space, Load, Save, Append & Kill files. The ARE YOU SURE? prompt prevents accidental overwriting & deletion. You can select files by simply cursoring through the disk directory. Supports double-sided drives & step-rates.

## PRINTING

Word Power 3.2 drives almost any printer (DMP, EPSON, GEMINI, OKIDATA, etc). Allows options such as band rates, line spacing, page/print pause, partial print, page numbering/placement, linefeeds, multi-line headers/footers, right justification & number of copies. The values of these parameters & margins can be changed anytime in the text by embedding Printer Option Codes. The **WHAT YOU SEE IS WHAT YOU GET** feature allows you to preview the text on the screen as it will appear in print. You can view margins, page breaks, justification & more.

## PRINT SPOOLER

Why buy a hardware Print Spooler? Word Power 3.2 has a **built-in Spooler** which allows you to simultaneously edit one document & print another.

## TWO-COLUMN PRINTING

This unique feature allows you to print all or portion of your text in **two columns**! Create professional documents without hours of aligning text.

## SPELLING CHECKER

Word Power 3.2 comes with spelling checker/dictionary which finds & corrects mistakes in your text. You can add words to /delete words from dictionary.

## PUNCTUATION CHECKER

This checker will proofread your text for punctuation errors such as capitalization, double-words, spaces after periods/commas, and more. Its the perfect addition to any word processor.

## DOCUMENTATION

Word Power 3.2 comes with a well-written instruction manual & reference card which makes writing with Word Power a piece of cake! Word Power 3.2 comes on an **UNPROTECTED** disk and is compatible with RSDOS. Only \$79.95

(Word Power 3.1 owners can get Word Power 3.2 Upgrade FREE by sending proof of purchase & \$5.00 to cover S&H costs & instructions)

# A Great Holiday Gift Idea!

## RAINBOW Binders

### Distinctive, Durable RAINBOW Binders

THE RAINBOW is a vital resource to be referred to again and again. Keep your copies of THE RAINBOW safe in our quality, distinctive binders that provide complete protection.

These attractive red vinyl binders showcase your collection and ensure your RAINBOWS are in mint condition for future use. Each binder is richly embossed with the magazine's name in gold on the front and spine. They make a handsome addition to any room.

### Put an End to Clutter

Organize your workspace with these tasteful binders. Spend more time with your CoCo and eliminate those frustrating searches for misplaced magazines.

A set of two binders, which holds a full 12 issues of THE RAINBOW, is only \$13.50 (plus \$2.50 shipping and handling).

### Special Discounts on Past Issues

To help you complete your collection of THE RAINBOW, we're offering a special discount on past issues of the magazine.

When you place an order for six or more back issues of THE RAINBOW at the same time you order binders, you are entitled to \$1 off the regular back issue price. To order, please see the "Back Issue Information" page in this issue.

### Know Where to Look

You may purchase the "Official And Compleat Index To THE RAINBOW" for \$1 when you purchase a set of binders. This comprehensive index of RAINBOW's first three years (July 1981 through July 1984) is usually priced at \$2.50.

For greater convenience, order RAINBOW Binders through the shopping area of the CoCo SIG of Delphi.

**YES.** Please send me \_\_\_\_\_ set(s) of RAINBOW binders

Take advantage of these special offers with your binder purchase:

- \_\_\_\_ Save \$1 off the single issue cover price for back issues. Minimum order of 6 magazines. Please enclose a back issue order form from a recent issue indicating magazines wanted.
- \_\_\_\_ Purchase the "Official and Compleat Index to THE RAINBOW" for \$1. (Regular price \$2.50.)

(These offers good only with the purchase of a RAINBOW binder set)

Charge:  VISA  MasterCard  Am. Express  
Account Number \_\_\_\_\_

Signature \_\_\_\_\_ Exp. \_\_\_\_\_

\*U.S. currency only, please. In order to hold down costs, we do not bill. Kentucky residents add 5% sales tax. Please allow 6 to 8 weeks for delivery of first copies. Joint subscriptions to THE RAINBOW and RAINBOW ON TAPE or RAINBOW ON DISK begin with the current issue.

Please note: While group purchases of RAINBOW ON TAPE and RAINBOW ON DISK are permitted (and multiple subscriptions are even discounted, if purchased in one order from a club), no license to make copies is conveyed or implied. Yes, your group may even purchase a subscription to our disk/tape services, but such purchase in no way authorizes that any copies be made of that original disk/tape. Specifically, this means that the original disk/tape itself may indeed be kept in a club library for use by members. However, a group purchase does not entitle club members, individually or as a group, to copy that disk/tape.

Unauthorized copying of any copyright product is strictly illegal. The copyright (right to make copies) is in no way conveyed in the purchase transaction.

# COCO 3 UTILITIES GALORE

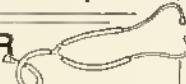

(CoCo 2 Versions Included where specified)

Obviously, I did not "get tired" of my computer. The reason is a very simple one — and it really relates to the complaint my friend had when he first saw my first computer. Our computers, all of them, are really nothing more than empty boxes waiting to be filled with whatever we are interested in.

That is the secret, of course.

No matter what your interest, you can "fill up" your Tandy computer with information about it. Art and words, data (read that information of any kind) and communications — whatever it is, you have the empty box right there, and you can fill it to the brim with your own interests.

I have heard literally hundreds of stories over the years from people who bought a computer for one single reason or another — to balance a checkbook, to play games, to write letters — and found that simply and easily, just by adding another program, they could make it do all of those things and so much more.

I think my favorite recreational use of the computer is using my desktop publishing program to create little "news-

**"Our computers  
are really nothing  
more than empty  
boxes waiting to  
be filled with  
whatever we are  
interested in."**

papers" celebrating one event or another in the lives of my family and friends.

When the friend I mentioned at the start of this column turned 45, I did a special "newspaper" for him — all about him. When my daughter was married a few months back, there was another. Other events have been "celebrated" in the same way.

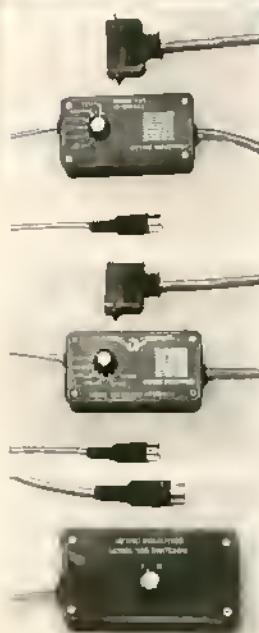

For me, these are creative and fun. But the nicest thing of all is that doing just them would never justify the expense of a computer. So, at home, I also play some games, keep track of expenses, have files of all my books and do a myriad of other things. Yes, interest in this or that will flag, but, remember, the computer is just an empty box waiting for me to fill it up.

I know most of you know this. But I am sure you have friends who do not. Do them each a favor. Tell them to buy computers as presents to themselves next month.

And, yes, tell them to get that Color Computer from Tandy. Because, as time has proven, there really is no better value.

— Lonnie Falk

## METRIC INDUSTRIES, INC.

### Model 101

#### Serial to Parallel Printer Interface

- ★ Works with any COCO
- ★ Compatible with "Centronics" Parallel Input Printers
- ★ Just turn the knob to select any one of 6 baud rates 300-9600
- ★ Comes complete with cables to connect to your printer and computer
- ★ Can be powered by most printers

### Model 104 Deluxe Interface with "Modem Switch"

- ★ Same Features as 101 Plus
- ★ Built in Serial Port for your Modem or other serial device
- ★ Switch between Serial Output and Parallel Output
- ★ Comes with cables to connect to your computer and printer
- ★ Can be powered by most printers

### Model 105 Serial Switch

- ★ Connects to your COCO to give you 2 switch selectable Serial Ports
- ★ Comes with a 3 foot cable to connect to your computer
- ★ Now you can connect your Printer (or printer interface) and your Modem (or other serial device) to your COCO and flip the switch to use either device
- ★ Does not require power

### Cassette Label Printing Program

- ★ New Version 2.1 prints 7 lines of information on Cassette labels
- ★ Comes on Tape with instructions to transfer to disk
- ★ Menu driven, very easy to use
- ★ Save and Load Labels from Tape and Disk
- ★ Uses the features of your printer to print standard, expanded, and condensed characters
- ★ Automatically Centers Each Line of Text
- ★ Allows editing of label before printing
- ★ Program comes with 24 labels to get you started
- ★ 16K ECB required

#### Some of the Printers That Can —

Supply power for the 101 and 104 are Radio Shack, Star, Okidata, Brother, Juki, and Smith Corona.

#### Some of the Printers That Cannot —

Supply power for the interfaces are Epson, Seikosha, Panasonic, Silver Reed and NEC. If your printer cannot supply power to the interface you can order your interface with the "P" option or you can supply your own AC adapter. We recommend the Radio Shack 273-1431 AC adapter with a 274-328 connector adapter.

Write or call for more information or for technical assistance.

# Books That Can Launch A 1000 Programs!!

Pokes, Peeks and Execs are your guides into the jungle of computer programming. These commands give you the power of Machine Language without leaving the security of BASIC. Each book is a collection of "inside" information, with explanations and examples to help you immediately put it to use. Everyone from the novice to the professional will find these handy books a wealth of information.

## 300 POKEs, PEEKs, 'N EXECs for COCO III

- \* 40/80 column Screen Text Dump
- \* Save Text/Graphics Screen to Disk
- \* Command/Functions Disables
- \* Enhancements for CoCo3 BASIC
- \* 128K/512K RAM Test Program
- \* HPRINT Character Modifier

Only \$19.95

## 500 POKEs PEEKs, 'N EXECs

- \* Autostart your BASIC programs
- \* Disable Color BASIC/ECB/Disk BASIC commands
- \* Disable Break Key/Clear Key/Reset Button
- \* Generate a Repeat-key
- \* Transfer ROMPAKs to tape
- \* Set 23 different GRAPHIC modes
- \* Merge two BASIC programs
- \* And much much more!!!

For CoCo 1,2 and 3. Only \$16.95

ALL 3 BOOKS for \$39.95

## SUPPLEMENT TO 500 POKEs, PEEKs, 'N EXECs

- 200 additional Pokes,Peeks and Execs (500 Pokes Peeks 'N Execs is a prerequisite)
- \* ROMPAK transfer to disk
- \* PAINT with 65000 styles
- \* Use of 40 track single/double sided drives
- \* High-speed Cassette Operation
- \* Telewriter, EDTASM + CoCo Max enhancements
- \* Graphics Dump (for DMP printers) /Text Screen Dump

For CoCo 1,2 or 3. Only \$9.95

## UNRAVELLED SERIES

An invaluable aid for Basic and Machine Language programmers, these books provide a complete disassembly and annotated listing of the BASIC/ECB and Disk ROMs. These listings give complete, uninterrupted memory maps of the four ROMs. Gain complete control over all versions of the color computer.

**EXTENDED COLOR BASIC UNRAVELLED: COLOR BASIC** and EXTENDED BASIC ROM Disassembly: \$39.95

**DISK BASIC UNRAVELLED: DISK BASIC ROM 1.1 and 1.0 Disassembly:** \$19.95

**BOTH ECB AND DISK BASIC UNRAVELLED: \$49.95**

**SUPER EXTENDED BASIC UNRAVELLED: SUPER EXTENDED BASIC ROM Disassembly for CoCo 3.** \$24.95

**COMPLETE UNRAVELLED SERIES (all 3 books): \$59.95**

## OTHER SOFTWARE ...

**COCO MAX III (with hi-res interface): \$79.95**

**COCO MAX II: Disk \$77.95 Tape \$67.95**

**MAXFONTS #1, #2, #3, #4: Disk \$19.95 Each**

**CGP-220 Driver Kit For CoCo Max III: \$19.95**

**MAXPATCH: Run COCO MAX II on COCO 3.** \$24.95

**TELEWRITER 64 (COCO 1&2): Disk \$57.95 Tape \$47.95**

**TW-80: COCO3 features for TW-64 Disk \$39.95**

**TELEFORM: Mailmerge/form letters for TW-64 Disk \$19.95**

**AUTOTERM: Universal modem software Disk \$39.95 Cas \$29.95**

**PRO-COLOR FILE \*ENHANCED\*: Multi-feature Database \$59.95**

**PRO-COLOR FORM & DIR: Forms/directories for PCF. \$24.95** SIDEWISE: Print ASCII files sideways \$24.95

**EDT/ASM 64D: Editor-assembler (specify 1,2,3) \$59.95**

**SOURCE: CoCo Disassembler \$34.95 SOURCE III: \$49.95**

**CBASIC: Best Basic compiler \$149.95 CBASIC III: \$149.95**

**CoCo 3 Service Manual: \$39.95**

**CoCo 2 Service Manual: \$29.95**

**Inside OS9 Level II: \$39.95**

**Rainbow Guide To OS9 Level II: \$19.95**

**Rainbow Guide To OS9 II (disk): \$19.95**

**Complete Guide To OS9 (Level 1): \$19.95**

**Complete Guide To OS9 (2 Disk): \$29.95**

**CoCo 3 Secrets Revealed: \$19.95**

**Basic Programming Tricks: \$12.95**

**Assembly Language Programming (tepcos): \$18**

**Addendum For CoCo3 (tepcos): \$12**

**Color Computer Disk Manual (with ref card): \$29.95**

## COCO LIBRARY

## WINDOW MASTER

The hottest program for your CoCo 3!! Imagine using Windows, Pull-Down Menus, Buttons, Icons, Edit Field, and Mouse Functions in your Basic Programs. No need to use OS9. It uses the 640x255 (or 320x255) hires graphics mode for the highest resolution. Up to 31 windows can appear on the screen at one time. Need extra character sets? Window Master supports 5 fonts in 54 sizes! How about an enhanced Editor for Basic? It gives you a superb Basic Editor which leaves the standard EDIT command in the cold. And don't forget that many existing Basic/ML programs will operate under Window Master with little or no changes. In fact, it does NOT take up any memory from Basic. Requires 1 Disk Drive, RS Hi-res Interface & Joystick or Mouse. Specify 128K/512K. \$69.95 Window Master & Hi-Res Interface. Only \$79.95

F1  
Save &  
Display

F2

*Modifying the CoBBS system to work with the CoCo 3*

# A CoBBS Update

By Kevin Sloan

**S**ince 1985 many Color Bulletin Board Systems have been in use. When Tandy introduced the Color Computer 3 in mid-1986, many of the people who had been running *CoBBS* on their CoCo 2s upgraded to the more powerful CoCo 3, only to find out that their bulletin boards wouldn't work.

The incompatibility lies in the new interrupt structure. Since memory in the CoCo 3 can be "moved" with the memory management unit, an additional interrupt service was added to keep the machine from performing an interrupt to an area of memory that had been moved. For instance, when you do an HSCREEN2, memory at \$60000 to \$67FFF is moved into the CPU (central processing unit) address space of \$2000 to \$9FFF. If the IRQ (the interrupt that keeps the time on the timer function and in the software clock of *Coterm*) is serviced while the Hi-Res screen memory is in this location, BASIC crashes. Therefore, the initial interrupts were changed to point to \$FEEE instead of \$100.

The software clock in *Coterm* is the specific culprit. It pulls the IRQ address from \$FFF8 and \$FFF9 and tries to put its "detour" into \$FEF8 and \$FEF9 (where \$FFF8 and \$FFF9 point). The result is a foregone conclusion — the computer will crash and lock up.

The fix is very simple, and all changes that follow are to the original *CoBBS* system series appearing in THE RAINBOW from November 1985 to February 1986. To fix the software clock, just put

these three pokes in STARTUP right after *Coterm* is loaded from disk:

```
71 POKE &HF78, &HBE
72 POKE &HF79, &H01
73 POKE &HF7A, &H0C
```

The software clock in *Coterm* can now be used with the CoCo 3 as it would be normally with the CoCo 1 or 2.

But that's not all you must do to get *CoBBS* working. You need to remove the useless Error Trapper, since the CoCo 3 has that built in. To ensure that it is not poked into memory, delete the GOTO 250 in Line 210 in STARTUP:

```
210 FOR A=$H10D5 TO $H10D7:POKE
A,&H12:NEXT A
```

Next, all of the RUNTs need to be changed to ON ERR GOTO. Here is a list of the line numbers in USER/SYS and COBBS/SYS where they can be located:

USER/SYS lines:

10, 20, 61, 64, 66, 68, 70, 80, 110, 180, 210, 305, 365, 371, 410, 415, 420, 430, 510, 905, 980, 7025, 7030, 8005, 9005 and 9610.

COBBS/SYS lines:

9, 11, 70, 405, 555, 604, 655, 1005, 1190, 1205, 1215, 1226, 1228, 1235, 1245, 1255 (two changes), 1275, 1290, 1310, 1340, 1342, 1345, 1375, 7025, 7030, 7040, 7041, 7060, 9615 and 9810

An easier way to do this is to save USER/SYS and COBBS/SYS as ASCII files. Then load them up in a word processor and do a universal change of RUNT and RUN T to ON ERR GOTO (*Disk Color Script* doesn't work very well because of its buffer size).

The error-trap processing needs to be upgraded to work with the CoCo 3's new commands as well. Make the fol-

lowing changes: In USER/SYS, delete lines 915, 920, 925, 930 and 935. Then retype Line 935 to read:

```
935 ER$="***Error: Type"+STR$(
ERNO)+" in Line"+STR$(ERLIN)
+":User"
```

In COBBS/SYS delete lines 1180, 1181, 1182, 1183 and 1185. Retype Line 1185 to read:

```
1185 ER$=CHR$(13)+"*ERROR"+STR$(ERNO)+" IN LN"+STR$(
ERLIN)+" *": GOSUBB70:
PRINTER$: GOSUB9615: TR$=
STRING$(32,"") +CHR$(13)+ER$+CHR$(13): GOSUB9600
```

To take advantage of your CoCo 3's Hi-Res text screens. Make the following changes to USER/SYS:

Add Line 6: 6 WIDTH32: PALETTE
13, 0: Palette 12, 63

Change the CLS0 to CLS in Line 34:

```
34 II=TIMER: IFII>19999 AND
PEEK(4694)<>0 THEN CLS: IFII
>60000 THEN TIMER=20000
```

Insert WIDTH40: PALETTE8, 63:
CLS3 in Line 40:

```
40 WIDHT40: PALETTE8, 63: CLS3:
EXEC&H10DA: POKE4652, 0
```

Insert WIDHT40: PALETTE8, 63:
CLS3 in Line 66:

```
66 WIDHT40: PALETTE8, 63: CLS3:
GOSUB9000: IFK1=0 THEN 67 ELSE GET
#1, 1: RE=CVN(H1$): GET#1, 2: RS
=CVN(H1$): CLOSE
```

Now your *CoBBS* system should work on your CoCo 3. I will be happy to help you with this upgrade. My bulletin board runs from 10 p.m. CST to 1 p.m. CST of the next day Monday through Friday, or I'll put the system up at any other time upon request. Just call at 300 bps, 7 bits, one stop bit, 601-693-8092.

Editor's Note: The modified COBBS/SYS and USER/SYS files are included on this month's RAINBOW ON TAPE and DISK.

(Questions or comments concerning this upgrade may also be addressed to the author at 3228 11th Place, Meridian, MS 39305. Please enclose an SASE when requesting a reply.)

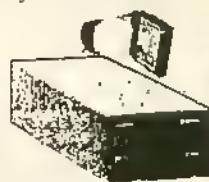

---

*Kevin Sloan, a computer operator and programmer by profession, has been using the CoCo for five years and is a very active member of his local user group.*

## DISK DRIVES

New Double-Sided Double-Density 360K 40-Track 1/2 ht drives for CoCo 2 & 3. These are the same quality drives that are used in IBM® compatible computers. Buy from someone else and all you get is a disk drive. Buy from us and not only do you get a quality drive but \$50 of Free Disk Utility Software (Super Tape/Disk Transfer & Disk Utility 2.1A) and our DISKMAX utility which allows you to access BOTH sides of our drives. It's like buying TWO drives for the price of ONE!! 90-day warranty on all drives!

Drive 0 (With Disto Super Controller!, Case, Power Supply & Cable): \$229.95      Drive 1: \$149.95  
 TWO 1/2 ht Drives in one case with Cable, Case & Disto Controller: \$339.95      Bare Drive: \$89  
 J & M Controller (with RSDOS): \$79.95      1 Drive Cable: \$19.95      2 Drive Cable: \$24.95      4 Drive Cable: \$39.95  
 DISTO Super Controller: \$99.95      DISTO Super Controller II: \$129.95  
 Add Ons: Mini Eprom Prog: \$54.95      RT Clock/Parallel Interface: \$39.95      Hard Disk Interface: \$49.95      Multi-Board Adapter: \$59.95

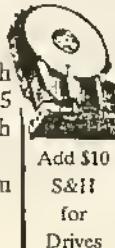

## HARD DRIVE SYSTEMS

Complete w/Hard Drive, WD Controller, B&B Interface, Cables, Case, Power Supply, Software (OS9/Basic) & Instruction Manual. Assembled/ tested/ formatted. Just Plug'n'Run!! Multipak Req.  
 Seagate 20 Meg System: \$509      Best Hard  
 Seagate 30 Meg System: \$539      Drive Deal

## HARD DRIVE INTERFACES

CoCo XT: Use 2 5-120 Meg Drives with CoCo. \$69.95, w/Real Time Clock: \$99.95  
 Hyper IO: Allows Hard Drive use with RSDOS. Only \$29.95  
 CoCo XT ROM: Boots OS9 from Hard/Floppy Drives. Only \$19.95  
 (Multipak Required for Interface)

## RS232 SUPER PACK

Here it is! True RS232 port for your CoCo. Compatible with Tandy® Deluxe RS232 Pack! Includes DB25 Cable. Req. Multipak. From DISTO so you know its quality! Going fast! Only \$54.95 (CoCo 1,2 or 3).

## COMMUNICATIONS EXTRAVAGANZA

- 1) AVATEX 1200e MODEM: Fully Hayes compatible 300/1200 w/ speaker, Auto-Dial/Answer/Redial (Reg \$109.95)
  - 2) MODEM CABLE: 4 pin to DB25. (Reg \$19.95)
  - 3) AUTOTERM TERMINAL SOFTWARE (Reg \$39.95)
  - 4) FREE COMPU SERVE OFFER and Access Time
  - 5) UPS 2nd DAY AIR Shipping ONLY \$149.95
- (With AVATEX 1200hc instead of Avatex 1200e: \$174.95)  
 with AVATEX 2400: \$249.95

## MAGNAVOX 8CM515 RGB MONITOR

Razor-sharp picture quality for your CoCo! Has 14" screen, Analog/TTL RGB, Composite inputs for CoCo 2/3, Speaker, tilt-stand & 2 year warranty! With a push of a button you can go from RGB to composite mode. This means that ALL your CoCo programs that appear in B&W in RGB mode will appear in color!! Only \$265 (add \$12 S&H US/\$40 in Canada). Magnavox Cable for CoCo 3, Composite/Audio Cable with purchase of monitor: \$19.95

## KEYBOARDS , ETC.

**KEYBOARD EXTENSION CABLE:** Move your keyboard away from the computer & type with ease. Use your existing keyboard with this cable or leave your present keyboard intact and use a second keyboard. Only \$39.95.  
 Cable with CoCo 2 Keyboard: \$49.95  
 Cable with CoCo 3 Keyboard: \$69.95  
 CoCo 3 Keyboard (with free FUNCTION KEYS software value \$14.95): \$39.95  
 CoCo 2 Keyboard: \$19.95

**NX-1000 Rainbow Printer**  
 Fully Epson Compatible 7 Color Printer.  
 Only \$259

## CABLES

MAGNAVOX 8505/8515/8CM643 Analog RGB Cable: \$24.95  
 SERIAL-TO-PARALLEL INTERFACE: Use your parallel printer at high speed (300-9600 baud) with CoCo. Comes with all cables. No software compatibility problems. Only \$44.95  
 15" MULTIPAK/ROMPAK EXTENDER CABLE: \$29.95  
 VIDEO DRIVER: Use a monochrome/color monitor with your CoCo. Comes with audio/video cables. Specify CoCo 1 or 2. Excellent picture quality/resolution! \$34.95  
 RS232 Y CABLE: Hook 2 Devices to the serial port. Only \$18.95  
 Y CABLE: Use your disk system with Speech Pak, CoCo Max, DS69, etc. \$27.95  
 RGB Analog Extender Cable: \$19.95  
 SONY Monitor Cable: \$29.95  
 VIDEO CLEAR: Reduce TV interference. \$19.95  
 MODEM CABLE: 4 pin to DB25. Only \$19.95  
 3-POSITION SWITCHER: \$37.95  
 HI-RES JOYSTICK INTERFACE: \$11.99

## CHIPS, ETC

Disk Basic Rom 1.1 (Needed for CoCo 3): \$29.95      ECB ROM 1.1: \$29.95  
 68B09E or 6809E Chip: \$14.95  
 MultiPak PAL Chip for CoCo 3: \$19.95

PAL Switcher: Now you can switch between the CoCo 2 and 3 modes when using the Multi-Pak. You need the OLDER & NEW PAL chip for the 26-3024 Multipak. Only \$39.95. With NEW PAL Chip: \$49.95.  
 5 1/4" Disks: \$0.45 each!

## UPGRADES

512K Upgrades for CoCo 3: \$CALL  
 64K Upgrade for CoCo 1's, CoCo II's  
 with 26-3134 A/B CoCo II: \$39.95  
 3136: \$29.95  
 64K Upgrade for 26-3134 A/B CoCo II: \$39.95  
 (Free 64K Utility Software incl. with 64K Upgr.)

## MICROCOM SOFTWARE

All orders \$50 & above (except drives, printers & monitors) shipped by UPS 2nd Day Air at no extra charge within US. We accept Visa, MasterCard, Amex, Check or MO. Sorry, no CODs. Please add \$3 S&H (USA/CANADA); except where specified otherwise; Foreign 10% S&H(minimum \$5). New York State residents please add sales tax. Looking for new software/hardware.

# NEW REAL DESKTOP

# CoCo Max™ III

# AND

**CoCo Max III** is absolutely the best drawing package available for the CoCo 3, and it does more than just let you draw. **CoCo Max III** includes animation, text, color mixing and more features than you would think possible. It combines incredible speed with dazzling graphics and it is a joy to use even its most powerful features.

Pictures, graphs, flyers, cards, signs, school projects, labels, buttons and anything else you might dream of creating is now possible with **CoCo Max III**. Is it any wonder that the majority of CoCo Gallery pictures in the last five months were created with **CoCo Max**?

Thousands of CoCo users have found that you don't have to be an artist to have fun with **CoCo Max**. You'll wonder why you waited so long to get the incredible **CoCo Max III**.

## **CoCo Max III** is the best because it includes:

- a huge picture area (two full hi-res 320x192 screens)
- a large editing window - Zoom mode for detail work - 28 drawing tools which you just point and click on - shrink and stretch - rotation at any angle (1.5 degree steps)
- 512K memory support (all features work with 128K too) - an Undo feature to correct mistakes - you can even Undo an "Undo" - Animation - special effects - color sequencing (8 colors, variable speed) - thirteen fonts (more available) - each font has eight different sizes - five style options (bold, italic, 3D, etc.) for thousands of font/size/style combination possibilities.
- the CoCo Show "slide show" program - color editing of patterns - automatic pattern alignment - prints in single and double size - smart lasso (move text over a background...)
- advanced tools: arc, ray, cube, etc. - select 16 of the 64 colors (all 64 colors are displayed at once for selection!) - picture converter (CoCo Max II, MGE, BASIC) - extensive prompting - "glyphic" clipboard of rubber stamps - double click shortcuts - color mixing (additive/subtractive/none) - money back guarantee - sophisticated data compression saves disk space - pull down menus (no commands to remember) - forty paintbrush shapes - two color lettering - spray can - scrapbooks of pictures - error tree
- Y-cable or multipack not required - high speed hi-res Interface Included (plugs into joystick port) - disk is not copy protected
- amazing "flowbrush" - RGB and composite monitor support
- replace color - printing on black and white printers in five shades of gray - full color printing with optional drivers for the NX-1000 Rainbow and CGP220 - entirely rewritten for the CoCo 3

There are no limits to what you can do with this fabulous program. Speed, ease, animation, power and color, all in one package. **CoCo Max III** is the ultimate program for the CoCo 3. -Rainbow review 4/88

### **CoCo Max III: \$79.95**

Max-10 owners: deduct \$10

#### **System Requirements:**

CoCo 3 disk system and a Joystick or Mouse

#### **Printer drivers included:**

IBM/Epson and compatibles, GEMINI, DMP105/106/130, OKI182/192, CGP220 (B&W), DMP110, DMP200

**Color printer drivers** (prints 125 different colors) Star NX-1000, CGP-220, or Okimate 20 each \$19.95

### **For all CoCo Max Versions**

**Max Edit Font Editor:** A font is a set of characters of a particular style. With Max Edit you can create new fonts or modify the existing ones. **\$19.95**

**Max Font disks** (send for list) each **\$19.95**

**Max Font Set** (95 fonts on 4 disks) **\$49.95**

**DS69/69B Digitizers:** allows you to capture the image from a VCR or video camera and bring it into your computer. CoCo Max will let you load digitized pictures and modify them.

**DS-69** (2 images per second. Requires multipak) **\$99.95**

**DS-69B** (8 images/second) **\$149.95**

### **CoCo 1 & 2 Owners**

**Still Available:**  
(See previous ads or write for information)

**CoCo Max II** (works on all disk CoCos) **\$69.95**

# Max-10

## THE DAZZLING WORD PROCESSOR

You probably already have a word processor, and you probably wish it had these features:

- Fully menu driven (CoCo Max style) with point and click marking of text. You don't need the arrow keys!
- True WYSIWYG (What You See Is What You Get) including variable size fonts, styles (bold, italics, etc.) and graphics.
- Can print multiple columns on a page.
- Not limited by printer capabilities: fonts up to 24 points (1/3") high, superscripts, small print, etc.
- Fully integrated spelling checker (incredibly fast), no need to exit program to check spelling.
- Graphics can be imported from just about anything (CoCo Max; MGE; BASIC; even Macintosh pictures from a BBS) and resized to fit your document.
- Full screen preview including graphics.

Max-10 has all these unique features, plus all the features you are used to in your current word processor. Even with all this, you don't give up anything. Max-10 is easier to use, more intuitive, faster and more powerful than anything else. It's not just a word processor, it's a desktop publisher.

**Max-10: \$79.95**

CoCo Max III owners: deduct \$10

Max-10 requires a CoCo 3, at least 1 disk, & joystick or mouse  
Printer drivers included: IBM/Epson and compatibles: DMP  
105, DMP106, DMP130; CGP220 (B&W); Gemini/Star

**WYSIWIG** *adj.* (wiz-ee-wig) 1. What You See Is What You Get (acronym)

A LARGE CHOICE OF 700 LOOKING FONTS AND STYLES.

Some of the many features of Max-10:

- Blinding speed - printing in multiple columns - online dictionary - spell checking - graphics can be mixed with text - full justification of proportionally sized characters - bold, italic, underline superscript and subscript type styles - superb file support, just point and click - "Undo" lets you correct mistakes - easy to use, no commands to remember - any graphics program can be used - pictures can be shrunk or stretched to fit - right and left alignment - centering - variable line spacing - page numbering - current page number displayed on the screen - variable tab stops - left and right margins - tabs and margins can vary in the same document - cut and paste text and graphics anywhere in the file - page break shows on the screen - pull down menus are quick and simple to use - lightning fast access to any point in the document with the scroll box - twenty fonts (styles and sizes), more available - any number of character sizes and styles can be mixed on the same line - up to more than 120 characters per line, depending on font size, style and letters - headers and footers, even with graphics - file compatibility with other word processors - right, left, bottom and top margins - word wrap - set starting page - type ahead - key repeat - key click - scroll up and down - ASCII file output for compatibility - disk directory - kill files - block cut, copy and move - global search and replace - paragraph indent - clipboard - merge - show file (on disk) - tree memory display - page count - paragraph count - word count - graphics can be resized and moved - multiple fonts - error recovery - true lowercase - 512K memory support (all features work with 128K too) - complete point and click cursor control - moving, clearing and changing blocks of text is ridiculously easy, just point and click at each end of the text block - onscreen ruler - preview tile before loading - search and replace - disk is not copy protected - more than 35 pages of text

## CoCo Max III and Max-10 Perfect Together

You do not need CoCo Max III to insert and print graphics in Max-10. Max-10 works with any graphics creation program, and you can also use graphics downloaded from bulletin boards.

Similarly, you do not need Max-10 to create graphics with text in CoCo Max III. There are tremendous filtering capabilities in CoCo Max III, with its many fonts, styles, and sizes.

Together Max-10 and CoCo Max III are an unbeatable combination. This desktop publishing system is better than anything you've ever seen on a CoCo. We are so confident that you will use, and enjoy using the two software packages, that we offer an unconditional money back guarantee. Stop wasting your time and effort using inferior or obsolete products. Move up to the new generation of CoCo software now.

# DISCOVER A WORLD OF SOFTWARE

In the New *EXPRESS ORDER Buyer's Guide*. Over 850 programs...just a phone call away.

Say hello to a new way to buy software. Express Order is the convenient new distribution system for today's most popular programs.

Choose from personal productivity, educational and entertainment programs for the Color Computer in our free 84-page guide. Then call our toll-free number and your

software will be sent directly to you—freight prepaid!

Express Order is both convenient and affordable. Our prices are often 10 to 30% less than the manufacturer's suggested retail price.

A DIVISION OF TANDY CORPORATION

# The Amazing A-BUS

**NEW**

An A-BUS system with two Motherboards  
A-BUS adapter in foreground

The A-BUS system works with the original CoCo,  
the CoCo 2 and the CoCo 3.

## About the A-BUS system:

- All the A-BUS cards are very easy to use with any language that can read or write to a Port or Memory. In BASIC, use INP and OUT for PEEK and POKE with Apples and Tandy Color Computers.
- They are all compatible with each other. You can mix and match up to 25 cards to fit your application. Card addresses are easily set with jumpers.
- A-BUS cards are shipped with power supplies (except PD-123) and detailed manuals (including schematics and programming examples).

### Relay Card

RE-140: \$129

Includes eight industrial relays (3 amp contacts, SPST) individually controlled and latched. 8 LED's show status. Easy to use (OUT or POKE in BASIC). Card address is jumper selectable.

### Reed Relay Card

RE-158: \$99

Same features as above, but uses 8 Reed Relays to switch low level signals (120mA max). Use as a channel selector, solid state relay driver, etc.

### Analog Input Card

AD-142: \$129

Eight analog inputs. 0 to +5V range can be expanded to 100V by adding a resistor. 8 bit resolution (20mV). Conversion time 120us. Perfect to measure voltage, temperature, light levels, pressure, etc. Very easy to use.

### 12 Bit A/D Converter

AN-146: \$139

This analog to digital converter is accurate to .025%. Input range is -4V to +4V. Resolution 1 millivolt. The on board amplifier boosts signals up to 50 times to read microvolts. Conversion time is 130ms. Ideal for thermocouple, strain gauge, etc. 1 channel (Expand to 8 channels using the RE-156 card)

### Digital Input Card

IN-141: \$59

The eight inputs are optically isolated, so it's safe and easy to connect any "on/off" devices, such as switches, thermostats, alarm loops, etc. to your computer. To read the eight inputs, simply use BASIC INP (or PEEK).

### 24 Line TTL I/O

DG-148: \$65

Connect 24 input or output signals (switches or any TTL device) to your computer. The card can be set for input, latched output, strobed output, strobed input, and/or bidirectional strobed I/O. Uses the 8255A chip.

### Clock with Alarm

CL-144: \$89

Powerful clock/calender with battery backup for time, date and alarm setting (time and date); built in alarm relay, led and buzzer, timing to 1/100 second. Easy to use decimal format. Lithium battery included.

### Touch Tone® Decoder

PH-145: \$79

Each tone is converted into a number which is stored on the board. Simply read the number with INP or POKE. Use for remote control projects, etc.

### A-BUS Prototyping Card

PR-152: \$15

3 1/2 by 4 1/2 in. with power and ground bus. Fits up to 10 ICs.

Add \$3.00 per order for shipping.  
Visa, MC, checks, M.O. welcome.  
CT & NY residents add sales tax.  
C.O.D. add \$3.00 extra.  
Canadian shipping is \$5  
Overseas add 10%

**ALPHA Products**  
242-W West Avenue, Darien, CT 06820

## Plug into the future

With the A-BUS you can plug your PC (IBM, Apple, TRS-80) into a future of exciting new applications in the fields of control, monitoring, automation, sensing, robotics, etc.

Alpha's modular A-BUS offers a proven method to build your "custom" system today. Tomorrow, when you are ready to take another step, you will be able to add more functions. This is ideal for first time experimenting and teaching.

A-BUS control can be entirely done in simple BASIC or Pascal, and no knowledge of electronics is required!

An A-BUS system consists of the A-BUS adapter plugged into your computer and a cable to connect the Adapter to 1 or 2 A-BUS cards. The same cable will also fit an A-BUS Motherboard for expansion up to 25 cards in any combination.

The A-BUS is backed by Alpha's continuing support (our 11th year, 50000 customers in over 60 countries).

The complete set of A-BUS User's Manuals is available for \$10.

ST-143

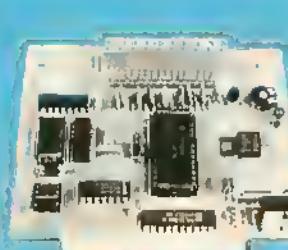

CL-144

RE-140

IN-141

AD-142

### Smart Stepper Controller SC-149: \$299

World's finest stepper controller. On board microprocessor controls 4 motors simultaneously. Incredibly, it accepts plain English commands like "Move arm 10.2 inches left". Many complex sequences can be defined as "macros" and stored in the on board memory. For each axis, you can control coordinate (relative or absolute), ramping, speed, step type (half, full, wave), scale factor, units, holding power, etc. Many inputs: 8 digital & 8 TTL until switches, panic button, etc. On the fly repositioning of position, speed, etc. On board drivers (350mA) for small slappers (MO-103). Send for SC-149 flyer.

### Remote Control Keypad Option RC-121: \$49

To control the 4 motors directly, and "teach" sequences of motions.

### Power Driver Board Option PD-123: \$89

Boost controller drive to 5 amps per phase. For two motors (eight drivers).

### Breakout Board Option BB-122: \$19

For easy connection of 2 motors. 3 II. cable ends with screw terminal board.

### Stepper Motor Driver ST-143: \$79

Stepper motors are the ultimate in motion control. The special package (below) includes everything you need to get familiar with them. Each card drives two stepper motors (12V, bidirectional, 4 phase, 350mA per phase). Special Package: 2 motors (MO-103) + ST-143 PA-181: \$99

### Stepper Motors MO-103: \$15 or 4 for \$39

Pancake type, 2 1/4" dia, 1/4" shaft, 7 5/8" long, 4 phase bidirectional, 300 step/sec, 12V, 36 ohm, bipolar, 5 oz-in torque, same as Airpax KB2701-P2

### Current Developments

Intelligent Voice Synthesizer, 14 Bit Analog to Digital converter, 4 Channel Digital to Analog converter, Counter Timer, Voice Recognition.

### A-BUS Adapters for:

IBM PC, XT, AT and compatibles. Uses one short slot. Tandy 1000, 1000 EX & SX, 1200, 3000. Uses one short slot.

Apple II, II+, IIe. Uses any slot.

TRS-80 Model 102, 200. Plugs into 40 pin "system bus". Model 100. Uses 40 pin socket. (Socket is duplicated on adapter).

TRS-80 Model 3, 4, 4D. Plugs 50 pin bus. (With hard disk use Y-cable).

TRS-80 Model 14P. Includes extra cable. 150 pin pins are recessed.

TRS-80 Model 1. Plugs into 40 pin I/O bus on KB or EA Color Computers (Tandy). Plugs ROM slot, Multipak, or Y-cable.

AR-133 \$69

AR-133 \$69

AR-134 \$49

AR-136 \$69

AR-135 \$69

AR-132 \$49

AR-137 \$62

AR-131 \$39

AR-138 \$49

### A-BUS Cable (3 ft, 50 cond.) CA-163: \$24

Connects the A-BUS adapter to one A-BUS card or to first Motherboard. Special cable for two A-BUS cards: CA-162: \$34

### A-BUS Motherboard MB-120: \$99

Each Motherboard holds five A-BUS cards. A sixth connector allows a second Motherboard to be added to the first (with connecting cable CA-161: \$12). Up to five Motherboards can be joined this way to a single A-BUS adapter. Sturdy aluminum frame and card guides included.

\* The A-BUS is not a replacement for the Multi-pak.

# The Fourth Rainbow Book of Adventures

Fourteen fascinating new Adventures from the winners of our fourth Adventure competition. Rely on your wits to escape a hostile military installation, try to stop the Nazi plan to invade Great Britain, or manage to reinstate our defense system before the enemy launches a massive missile attack — and that's only the beginning!

**The Park of Mystery** — You overhear a gang of robbers discussing where they've hidden their loot. Can you find it — and battle greed and confusion at the same time?

**Superspy** — You awaken from a horrifying nightmare of chases, inexplicable scenery changes and sickening freefalls into space. Or was it a dream? You be the judge — and determine your own fate!

**Term Paper** — A real nightmare: Someone's stolen your freshman midterm paper and hidden its pages all over CoCo State's campus. Are you smart enough to find them before you miss the due date and flunk the course?

**House Adventure** — Try to find your way out of a mysterious abandoned house that keeps sprouting new rooms just as you think you've found an exit.

**Life: An Everyday Adventure** — Just getting up in the morning in time to do last-minute chores before catching a plane to a family reunion proves you don't have to leave home to find adventure.

**The Earth's Foundations** — A mysterious maze inside a deep crevice near your village is having a devastating effect on the entire area. You've been chosen to investigate, and promised great riches — if you survive!

Experience other traditional and contemporary challenges from these winning authors: Mike Anderson, Tio Babich, David Bartmess, Stephen Berry, Eugene Carver, Charles Farris, Jeff Hillison, Jeff Johnson, Richard Kotike, Ken Lie, Andre Needham, Fred Provoncha, Paul Ruby Jr. and Eric Santanen.

**The Fourth Rainbow Book of Adventures is only \$10.95!**

**Tape \$9.95, Two-Disk Set \$14.95**

The tape and disks are adjuncts and complements to the book; the book is necessary for introductory material and loading instructions.

Please send me:

The Fourth Rainbow Book of Adventures \$10.95  
The Fourth Rainbow Adventures Tape \$9.95  
The Fourth Rainbow Adventures Disk Set \$14.95

# VIP Writer III 2.0

## 495K Total Text Space • EASY 4 Color MENUS

"In the beginning there was VIP Writer and users saw that it was good. But it's not the best anymore. There's a new word processor to claim the crown...VIP Writer III -Setting the Standard" —RAINBOW Sept. 1988

### COMPARISON CHART

	VIP Writer III	Telewriter 128	Word Power 3
Screen Display	32/40/64/80	40/80	80
Spelling Checker	VIP Speller	NONE	FREE WARE
Dictionary Size	50,000 Words	NONE	20,000 Words
Print Spooler	YES	NONE	YES
Total Space 128K	<b>106,000</b>	48,000	72,000
Total Space 512K	<b>495,104</b>	48,000	450,000

### SCREEN DISPLAY OPTIONS

VIP Writer III offers more screen width options all with 24 lines and actual lower case letters using the CoCo 3's hardware display. It runs at double clock speed and has 4-color menus making VIP Writer III FAST and EASY to use! You can choose foreground, background, hilite and cursor colors from up to 64 hues. Color can be turned ON or OFF for the best possible display using a monochrome monitor or TV set. VIP Writer III has a context sensitive help facility to display command usage in easy to read colored windows.

### CUSTOMIZER & PRINTER INSTALLER

VIP Writer III comes with a configuration / printer installation program which lets you customize VIP Writer III to suit your own liking. You can set screen width and colors as well as margins and more. You can also install your own printer and set interface type (serial, parallel or J&M), baud rate, line feeds, etc. Once done, you never have to enter these parameters again! VIP Writer III will load n' go with your custom configuration every time!

### TEXT FILE STORAGE

VIP Writer III creates ASCII text files which are compatible with all other VIP Programs as well as other programs which use ASCII files. You can use VIP Writer III to even type BASIC programs! There is a 48K text buffer (438K in a 512K CoCo 3) and disk file linking allowing virtually unlimited text space. VIP Writer III works with up to four disk drives and lets you display directories and free space as well as rename or kill disk files. In addition VIP Writer III is 100% compatible with the RGB Computer Systems Hard Disk.

### EDITING FEATURES

VIP Writer III has a full featured screen editor which can be used to edit text with lines up to 240 characters long with or without automatic word wrap around. You can select type-over mode or insert mode. There is even an OOPS command to recall a cleared text buffer. Other editing features include: Type-ahead • typematic key repeat and key beep for flawless text entry • end of line bell • full four way cursor control with scrolling • top

Writer III or Library /W owners: Upgrade to the VIP Writer III 2.0 for \$10 + \$3 S/H. Send ORIGINAL disk and \$13 total.

of textfile • bottom of textfile • page up • page down • top of screen • bottom of screen • beginning of line • end of line • left one word • right one word • DELETE character, to beginning or end of line, word to the left or right, or entire line • INSERT character or line • LOCATE and/or CHANGE or DELETE single or multiple occurrence using wildcards • BLOCK copy, move or delete with up to TEN simultaneous block manipulations • TAB key and programmable tab stops • word count • line restore • three PROGRAMMABLE FUNCTIONS to perform tasks such as auto column creation and multiple copy printing.

### TEXT FORMATTING

VIP Writer III automatically formats your text for you or allows you to format your text in any way you wish. You can change the top, bottom, left or right margin and page length. You can set your text flush left, center or flush right. You can turn right hand justification on or off. You can have headers, footers, page numbers and TWO auxiliary lines which can appear on odd, even or all pages. You can also select the line on which they appear! You can even change the line spacing! Parameters can be altered ANYWHERE!

### PREVIEW PRINT WINDOW

VIP Writer III features an exclusive formal window which allows you to preview your document BEFORE PRINTING IT! You are able to move up, down, left and right to see centered and justified text, margins, page breaks, broken paragraphs, orphan lines etc.

### PRINTING

VIP Writer III prints TWICE as fast as any other CoCo word processor! It supports most serial or parallel printers using J&M JFD-CP or Rainbow interface and gives you the ability to select baud rates from 110 to 19,200. You can embed printer control codes anywhere in your text file EVEN WITHIN JUSTIFIED TEXT! VIP Writer III also has TWENTY programmable printer macros which allow you to easily control all of your printers capabilities such as bold, underline, italics and superscript using simple key strokes. Other features include: multiple copy printing • single sheet pause • line feeds.

### PRINT SPOOLING

Save up to \$150 on a print spooler because VIP Writer III has a built in print spooler with a 57,000 character buffer which allows you to print one document WHILE you are editing another. You don't have to wait until your printer is done before starting another job!

### SPELLING CHECKER

VIP Writer III includes VIP Speller AT NO ADDITIONAL COST! VIP Speller checks text for misspelled words and has a 50,000 word dictionary that can be added to or edited.

### DOCUMENTATION

VIP Writer III comes with a well written 125 page manual which is Laser printed, not dot-matrix like the competition. It includes a tutorial, glossary of terms and examples for the beginner as well as a complete index!

**VIP Writer III includes VIP Speller. DISK \$79.95**

VIP Writer owners: Upgrade to the VIP Writer III 2.0 for \$49.95 + \$3 S/H. Send ORIGINAL disk and \$52.95 total.

## VIP Database III

VIP Database III features selectable screen displays of 40, 64 or 80 characters by 24 lines with choice of 64 foreground, background, hilite and cursor colors for EASY DATA ENTRY. It uses the CoCo 3's hardware screen and double clock speed to be the FASTEST database available! VIP Database III will handle as many records as will fit on your disks and is structured in a simple and easy to understand menu system with full prompting for easy operation. Your data is stored in records of your own design. All files are fully indexed for speed and efficiency. IN-MEMORY SORT of records is LIGHTNING FAST and provides for easy listing of names, figures, addresses, etc., in ascending or descending alphabetical or numeric order. Records can be searched for specific entries using multiple search criteria. The built-in mail-merge lets you sort and print mailing lists, print form letters, address envelopes - the list is endless. The built-in MATH PACKAGE even performs arithmetic operations and updates other fields. VIP Database III also has a print spooler and report generator with unlimited print format capabilities including embeddable control codes for use with ALL printers.

DISK \$69.95

VIP Database owners: Upgrade to the VIP Database III for \$39.95 + \$3 S/H. Send ORIGINAL disk and \$42.95 total.

## VIP Library

### Writer Database Enhanced

The VIP Library /WDE combines all six popular VIP application programs - VIP Database III, VIP Writer III, VIP Speller, VIP Calc, VIP Terminal and VIP Disk-ZAP - into one program on one disk! The program is called VIP Desktop. From the desktop you have instant access to word processing with a spelling checker always in attendance, data management with mail merge, spreadsheet financial analysis, telecommunications and disk maintenance.\* DISK \$169.95

For VIP Library shipping please add \$4 USA, \$5 Canada, \$10 Foreign.

VIP Library owners: Upgrade to the VIP Library /WDE for \$89.90\* + \$3 S/H. Send ORIGINAL disk and \$92.90 total.

\* Future VIP Library upgrades available at reduced cost.

All products run under RSDOS and are not copy protected.

## SD ENTERPRISES

(503) 663-2865

POB 1233 Gresham, OR 97030

Non VIP Library orders add \$3 for shipping and handling in USA, Canada \$4, Foreign \$6. COD orders add an additional \$2.25. Checks allow 3 weeks for delivery. All other orders are shipped the same day.

Telewriter 128 is a trademark of Comshare, Word Power 3 is a trademark of Microcon Software.

# CoCo Gallery

## 1st Prize CoCo 3

**Richard Perreault**  
**Tiger**

Richard, a student in Boucherville, Quebec, used *CoCo Max III* to develop this view of this fierce, flesh-eating native of Asia. Richard enjoys skiing, fishing and computing.

## 3rd Prize

**Robert Williams**  
**C-O-ARMS**

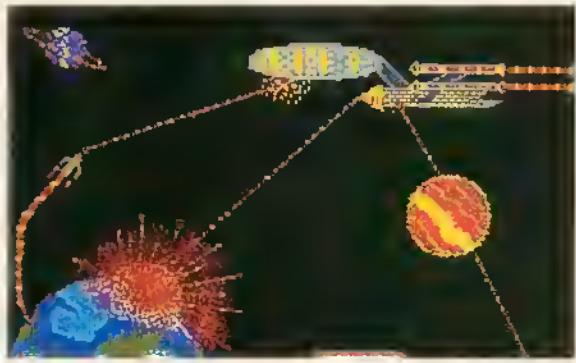

CoCo 3 BASIC was used to create this scene. Robert has been using a CoCo for four years, enjoys role-playing games and lives in Lucasville, Ohio.

## 1st Prize CoCo 1 and 2

**Mark Winship**  
**Spacecraft**

*Deskmate* and the CoCo 2 were used to illustrate Mark's idea of a traveling spacecraft. He lives in Houlton, Maine.

## 2nd Prize

James Farmer  
Starship

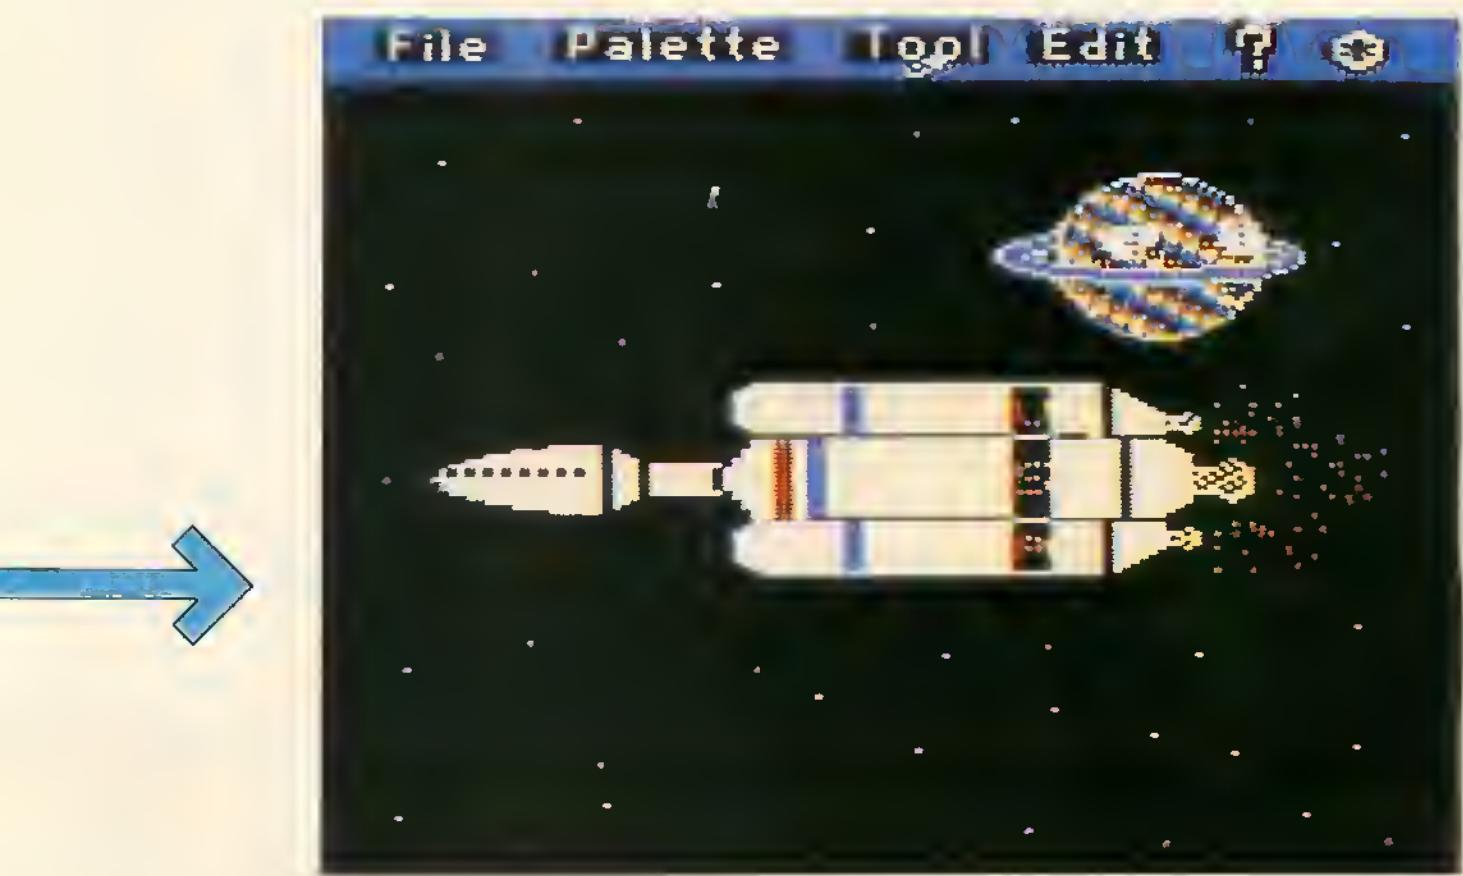

This animated scene was developed with *CoCo Max III*. James lives in North Charleston, South Carolina.

## Honorable Mention

Wally Mayes  
Eagle

Wally, a machinist in Hamilton, Ohio, used *CoCo Max III* to develop this depiction of the national emblem.

**SHOWCASE YOUR BEST!** You are invited to nominate original work for inclusion in upcoming showings of "CoCo Gallery." Share your creations with the CoCo Community! Be sure to send a cover letter with your name, address and phone number, detailing how you created your picture (what programs you used, etc.) and how to display it. Also, please include a few facts about yourself.

Don't send us anything owned by someone else; this means no game screens, digitized images from TV programs or material that's already been submitted elsewhere. A digitized copy of a picture that appears in a book or magazine is *not* an original work.

We will award two first prizes of \$25, one for the CoCo 3 and one for the CoCo 1 and 2; one second prize of \$15 and one third prize of \$10. Honorable Mentions may also be given.

Please send your entry on either tape or disk to the CoCo Gallery, THE RAINBOW, P.O. Box 385, Prospect, KY 40059. Remember, this is a contest and your entry will not be returned.

— Angela Kapfhammer, Curator

Connecting a CoCo to other computers

# The Computer Connection

By Don Hutchison

When I travel, I like to use my portable Tandy 102 both to stay in touch with Delphi, and to generate short messages and text files for articles, Delphi Mail, Help notes, etc. I enjoy the convenience of using the 102 almost anywhere. Sometimes, I sit on my sofa and use the 102 while watching TV or talking on the phone. I am sure that there are many others who like the 102 for the same reasons.

In the past, however, I felt restricted by my portable's inability to format. I wanted to transfer the text to my CoCo 3 to use its word processor for cleanup, formatting and final printing. I also wanted to transfer PCM ON DISK programs from my PC compatible to my Tandy 102. I began looking for a way to transfer programs from my PC compatible to my 102. Once I solved that problem, I began looking for ways to connect the PC compatible to my CoCo.

There are many reasons to use a second computer to download programs. You may choose to use your PC compatible because it has a hard drive or because your IBM terminal program provides support for *batched* uploads and downloads. (This option allows the transfer of multiple files with little or no operator intervention, and if you are paying for access to an information service, the time savings can be significant.) Programs that are downloaded

onto your PC compatible can be transferred to your CoCo at your leisure by using the techniques described in this article.

Although you won't be able to transfer MS-DOS programs to your CoCo and expect them to operate correctly, the CoCo and the PC compatible are now connected in a manner that allows them to communicate. If you prefer to download programs from Delphi onto a hard drive, there is now a convenient way to transfer the files to your CoCo.

## Background

Generally, computers are not sociable things. Indeed, they prefer to be left alone. A computer chooses one owner and will do what that owner asks of it, but it usually prefers not to communicate with other computers. Fortunately, computers can be made to talk with each other rather easily.

Let's begin by looking at the basics of computer interface. I'm a big fan of the KISS principle (Keep It Simple and Straightforward) so I looked for the minimum equipment needed to get two computers to talk to each other. Simple communications like the ones we'll be discussing are based on the use of just three signal lines: a line on which to *talk*, one on which to *listen* and a common line for the sake of electrical completeness.

There are two complementary config-

urations for the standard RS-232 interface: DTE (Data Terminal Equipment) and DCE (Data Communications Equipment). As the name implies, Data Terminal Equipment consists of those devices operating as terminals, and Data Communications Equipment is comprised of those devices designed to communicate with the outside world. The two devices are actually *designed* to be directly connected to each other.

A modem is a typical example of DCE gear, and portable computers, such as the Tandy 102, are examples of DTE gear. When a computer is imitating, or *emulating*, a terminal, it is configured to operate as DTE.

Although this sounds complicated, all we are defining is how a computer *listens* for information and *talks* to other devices. For example, DTE hardware uses Pin 2 to send data, and DCE equipment uses that pin to receive data. So, when the two devices are connected, one talks while the other listens. In fact, both units can be *talking and listening* at the same time. Humans should be so lucky.

To get your CoCo to communicate

*Don Hutchison is an electrical engineer living in Atlanta, Ga. He works as a senior project engineer and is involved in the design of industrial control systems. On Delphi, Don is the Database Manager of the RAINBOW SIG. His Delphi username is DONHUTCHISON.*

# Telewriter-128™

## the Color Computer 3 Word Processor

### TELEWRITER: UNDISPUTED #1

If you've read the other word processor ads, you've probably had your fill of cold lists of features, and claims of ultimate speed, power, and ease of use. So let's try to get past the overblown claims and empty buzz words—with 2 simple facts:

**Fact 1:** Telewriter is undisputedly the #1 most popular word processor on the Tandy Color Computers.

**Fact 2:** Telewriter's exemplary ease of use and power have been acclaimed in numerous magazine reviews and in thousands of letters and calls from end users.

### THE OTHERS DON'T UNDERSTAND

So why has Telewriter gained such a large and loyal following, while other Color Computer word processors have come and gone? Ironically, our competitors' ads tell you exactly why.

For them, word processing is nothing more than features and numbers. The longer the list of features, and the bigger the numbers, the better the word processor. Or so they think.

They just don't understand that power and ease of use are not gained by tacking on random features or throwing in freebie utilities or forcing you to use a cumbersome mouse.

*Real Power, true Ease of Use, and genuine Speed* can only be attained through thoughtful, logical, intelligent design, attention to detail, and a commitment to the art and the art of writing. That's the Telewriter tradition, and that's the reason for Telewriter's phenomenal success.

### TELEWRITER-128: INTELLIGENT DESIGN PERFECTED

And now, Telewriter-128, the latest Telewriter, uses the added hardware power of the Color Computer 3 to bring this intelligent design to its logical perfection.

Telewriter-128 adds unsurpassed speed and important new features to the already impressive arsenal of Telewriter-64. Not just speed for speed's sake, or features for the sake of advertising—but speed where it counts and features that make you a more efficient, more effective writer.

*Rainbow magazine* put it this way: "Telewriter-128 will set the word processing standard for the Color Computer 3 because it is so simple and user friendly... . The 81-page tutorial/user's manual is nicely done. It is written in easy to understand language but the program itself is so easy... . Most people will be able to use the software right out of the package."

### TELEWRITER-128 OR DESKTOP PUBLISHING

Desktop publishing is nice for adding pictures and fancy fonts to newsletters or business presentations—but its graphics orientation sacrifices some important capabilities when it comes to working with words.

If your main concern is expressing ideas through words (notes, letters, reports, papers, novels, etc.), the dedicated word processing power of Telewriter-128 still provides the most efficient tool for the job. Each tool has its place—desktop publishing for striking visuals, Telewriter-128, for effective writing.

### TELEWRITER-128 OR TELEWRITER-64

You can no longer afford to be without the ease, power, and efficiency, that Telewriter brings to everything you write.

Telewriter-128 for the Color Computer 3 costs \$79.95 on disk, \$69.95 on cassette.

For the Color Computer 1&2, Telewriter-64 costs \$59.95 on disk, \$49.95 on cassette.

To order by MasterCard or Visa, call (619) 755-1258 anytime, or send check to:

#### COGNITEC

704 Nob Avenue  
Del Mar, CA 92014

(Add \$2 S&H. Californians add 6% tax. To upgrade from TW-64 to TW-128 send original TW-64 disk and \$41.95.)

Telewriter is also available through your nearby Radio Shack Computer Center and participating Radio Shack stores and dealers—or order direct from Express Order by dialing 1-800-321-3133.

Ask for: Telewriter-128 (disk) . . . cat #90-0909  
Telewriter-64 (disk) . . . cat #90-0254  
Telewriter-64 (cass) . . . cat #90-0253

**FEATURES THAT MATTER:** Telewriter's outstanding design and its complete set of features, put it in class by itself, for smooth, efficient writing and letter perfect printed documents. Telewriter-128 includes:

**Unbeatable SCREEN PERFORMANCE:** lightning fast paging and scrolling, on-screen text that never lags behind your typing, and a response that is always instantaneous, no matter how much text is in the buffer, or where you are in the document.

**26 User definable MACRO KEYS** type your often used phrases and titles with a single keypress—saving you time and freeing your concentration for writing. User settable DUAL SPEED CURSOR moves you anywhere on the line, on the page, or in the document, fast or slow—you decide, with the touch of a finger. Fast PRINT PREVIEW MODE shows you text as it will print: headers, footers, margins, page breaks, page numbers, justification—saves time and paper and guarantees perfect looking documents everytime.

**Instant, ON-LINE HELP** summarizes all Telewriter-128 commands and special symbols. The On-line OPTIONS MENU lets you instantly customize the writing environment at any time to suit your precise needs (Screen/character color, Monochrome on/off, Key repeat/delay rate, 2 Cursor repeat/delay rates, Case-sensitivity of search, Auto file backup on/off, and more). A SINGLE FUNCTION KEY takes you instantly to any menu, so you never have to stop and think.

The 24, 25 or 28 LINE SCREEN DISPLAY option lets you see 16% more on-screen text (28), or wider line spacing (25). The auto-loading OPTIONS FILE stores all your Macros, Print Format settings, and Options Menu settings, so they are always there everytime you run Telewriter-128. 3 pop-up STATUS WINDOWS tell you cursor position, word count,

free space, etc.

The QUICK SAVE feature lets you instantly save your current document with just 2 keystrokes and without leaving the editor. CURSOR THROUGH DIRECTORY to Load, Append, Rename and Kill files—so you'll never type a filename after the first time. HANGING INDENTS help you organize ideas on the page more effectively. Also: Footers, Multiple Print, Print to Disk, Key Click, Key Repeat, 40/80 Column Option, Overstrike, Word Delete, Nested Macros, Definable Foreign and Math Symbols and more... .

And, of course, Telewriter-128 incorporates all the features of TELEWRITER-64, like: Works with absolutely any printer that works with your Color Computer (1, 2, or 3). Uses simple Embedded Control Codes so all intelligent features of your printer are easily accessed, including: Underlining, Boldface, variable Fonts, Sub-script, Super-script, Italics etc.

Format commands allow dynamically changing Margins, Headers, Spacing, Centering, etc., anywhere in the document. Format menu sets Margins, Spacing, Page numbering, Baud rate, Lines per page, Justification. Chain Printing means the size of your printed document is unlimited. Also Single page and Partial Print.

Fast full-screen editor with wordwrap, text alignment, block copy/move/delete, global search and replace, wild card search, fast 4-way auto-repeat cursor, fast scrolling, forward and backward paging, settable tabs, word and line counter, full error protection. Insert or delete anywhere on screen. Simple, easy to remember, "mnemonic" Editor Commands. Load, Save, Append, Partial Save files to disk or cassette, Kill, rename and list disk files. ASCII file compatibility.

with another computer, you only need to run a cable between the two computers, using the necessary adapters. In addition, these computers will run the terminal program of your choice.

### Communicating with Another CoCo

It is probably easiest to get CoCos to communicate with each other because, like their owners, CoCos are pretty gregarious. They like to get together and communicate, especially online on Delphi and at RAINBOWfests. They even exchange pictures.

It's a simple matter to connect two CoCos by using a cable to connect the two serial ports. Just *cross* the send-data and receive-data lines. In other words, connect the send-data line from one CoCo to the receive-data line on the other, and vice versa. When one CoCo talks on a signal line, the other CoCo listens.

To construct the necessary cable, use two four-pin DIN plugs (Part No. 274-007) and a suitable length of cable. The cable itself is not usually crucial in short-to-intermediate lengths, such as six to 15 feet. Electrically, the cable would follow as shown below:

	CoCo 1	CoCo 2
Receive Data	2	4
Signal Ground	3	3
Transmit Data	4	2

The Carrier Detect (CD) function, Pin 1, is not needed for most CoCo terminal programs. Although the popular terminal programs *GTerm*, *Mickeyterm* and *Rickeyterm* do not require a carrier detect signal to operate, some terminal programs do require the carrier detect line to be active. Because this function is normally provided by the modem, you must take steps to provide the carrier detect signal if you choose to use such a terminal program. Usually, the CD signal can be activated with a signal (such as DTR) that is obtained elsewhere.

After the computers are physically connected, simply load and run your favorite terminal program on each computer. This will allow you to transfer files back and forth. Pretty simple, huh?

I generally use the CoCo's standard four-pin DIN serial port for this type of communication because it is convenient. The serial port (on any model of

CoCo) is adequate for the short files I transfer, and it usually operates reliably at speeds up through 1200 bits per second. The CoCo 3 is capable of operating at 2400 bits per second through the serial port; however, I've been able to use only 300-band communications under OS-9 because of the increased system overhead.

Remember that several terminal programs will automatically sense the presence of an RS-232 pack, so remove it from your system before running the terminal program. *GTerm*, *Mickeyterm* and *Rickeyterm* all *auto sense* the RS-232 pack.

### Remote Connection under OS-9

OS-9 offers a unique method for connection through the serial port. This operating system allows you to use a separate terminal (such as a Tandy 102) to access OS-9. When you are connected to OS-9 in this fashion, you can type on either the main CoCo keyboard or the remote keyboard. OS-9 will honor requests from either source. Although some things can't be done from the remote keyboard (like showing windows on a Tandy 102), it's still fun to use.

To link to OS-9, execute the *xMode* utility to configure the serial port for use with an external terminal. To configure the port for 300-bps, 8-bit, 1 stop bit, no parity, just enter the following:

```
xmode /t1 type=0 baud=1
```

Next, invoke *TsMon* (the Timesharing monitor) with the following line:

```
tsmon /t1 &
```

This tells OS-9 to start up *TsMon* as a concurrent process. At this point, press ENTER from the remote terminal or keyboard to initiate the OS-9 login sequence. If you successfully log in to the system, you'll be greeted in the following manner:

```
WELCOME TO COLOR COMPUTER  
OS-9  
OS9:
```

When asked for a username, press ENTER again. OS-9 will initiate the appropriate steps to enable access to the system.

I've found this a quick and convenient way to extract text files from an OS-9 disk onto another computer.

Simply display the file(s) by entering the *LIST* command from the remote terminal or keyboard, and capture the text as it's displayed.

A better way to transfer files to and from an OS-9 disk is to use an OS-9 terminal program like *XTerm*. This method works better because the system overhead is too great to allow the operating system to service the serial port as often as required when using *TsMon* with /t1. The CoCo's serial port is not very useful under OS-9 at speeds above 300 bits per second.

This method is useful for those wanting to extract OS-9 text files from their CoCos and use them with portable computers. It's also convenient for those who prefer a Disk BASIC word processor like *Telewriter*. The text files can be edited using the method of your choice. However, don't forget that it isn't possible to transfer OS-9 binary files to a portable (or vice versa) and expect them to function correctly.

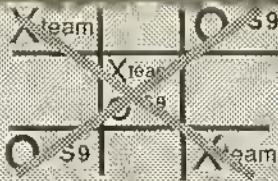

### Using RS-232 Packs

Because the CoCo uses nonstandard connectors for its serial port, we'll need to look at ways we can communicate with devices that use standard connectors and interface requirements. I refer to the CoCo's serial port because this port is not a true RS-232 port. The RS-232 standard defines both signal levels and the control signals that should be present. Fortunately, the serial port is compatible enough to let us communicate with a wide variety of RS-232 devices.

It is easy to initiate communication between two CoCos if both are using RS-232 packs. Rather than using the cable described above, you'll use a standard RS-232 cable with male DB-25 connectors on each end. Your local Radio Shack sells the cable (Part No. 26-1408). Although it is called an RS-232-C cable for Model III/12, we will be able to use it with our CoCos.

We will also need a small device called a null-modem adapter. That's a rather intimidating term for a simple adapter that is used when no modem is available (hence the name null modem). The advantage of this device is that you can use the cable with your modem when communicating with Delphi, then unplug the cable and use it with a null-modem adapter to interface with another computer. Radio Shack sells a suitable null-modem adapter (Part No. 26-1496) for under \$10.

# XTEAM & OS-9

## XTERM

OS-9 Communications program

- Menu oriented
- Upload/download Asell or XMODEM protocol
- Execute OS-9 commands from within XTERM
- Definable macro keys
- Works with standard serial port, RS232 Pak, or PBJ 2SP Pack, Includes all drivers
- Works with standard screen, Xscreen WORDPAK or DISTO 80 column board

## AND FOR RS DOS

### SMALL BUSINESS ACCOUNTING

This sales-based accounting package is designed for the non-accountant oriented businessman. It also contains the flexibility for the accounting oriented user to set up a double entry journal with an almost unlimited chart of accounts. Includes Sales Entry, transaction driven Accounts Receivable and Accounts Payable, Journal Entry, Payroll Disbursement, and Record Maintenance programs. System outputs include Balance Sheet, Income Statement, Customer and Vendor status Reports, Accounts Receivable and Payable Aging Reports, Check Register, Sales Reports, Account Status Lists, and a Journal Posting List.

**\$79.95**

### INVENTORY CONTROL/SALES ANALYSIS

This module is designed to handle inventory control, with user defined product codes, and produce a detailed analysis of the business' sales and the sales force. One may enter/update inventory data, enter sales, run five sales analysis reports, run five inventory reports, set up product code, enter/update customer records, and update the SBAP inventory.

**\$59.95**

### PAYROLL

Designed for maintaining personnel and payroll data for up to 200 hourly and salaried employees with 8 deductions each. Calculates payroll and tax amounts, prints checks and maintains year-to-date totals which can be automatically transferred to the SBA package. Computes each pay period's totals for straight time, overtime and bonus pay and determines taxes to be withheld. Additional outputs include mailing list, listing of employees, year-to-date federal and/or state tax listing, and a listing of current misc. deductions. Suited for use in all states except Oklahoma and Delaware.

**\$59.95**

**PERSONAL BOOKKEEPING 2000**  
Handles 45 accounts. Enters cash expenses as easily as checks. Handles 26 expense categories. Menu driven and user friendly.

**\$39.95**

### ACCOUNTS RECEIVABLE

Includes detailed audit trails and history reports for each customer, prepares invoices and monthly statements, mailing labels, aging lists, and an alphabetized customer listing. The user can define net terms for commercial accounts or finance charges for revolving accounts. This package functions as a standalone A/R system or integrates with the Small Business Accounting package.

**\$59.95**

### ACCOUNTS PAYABLE

Designed for the maintenance of vendor and A/P invoice files. The system prints checks, voids checks, cancels checks, deletes cancelled checks, and deletes paid A/P invoices. The user can run a Vendor List, Vendor Status report, Vendor Aged report, and an A/P Check Register. This package can be used either as a standalone A/P system or can be integrated with the Small Business Accounting Package.

# BOTH WINNERS

All of our OS-9 products work with:

OS-9 version 1

OS-9 version 2

OS-9 Level 2

## XWORD

### OS-9 word processing system

- Works with standard text screen, XSCREEN, WORDPAK, or DISTO
- True character oriented full screen editing
- Full block commands
- Find and Replace commands
- Execute OS-9 commands from within
- Proportional spacing supported
- Full printer control, character size, emphasized, italics, overstrike, underline, super/sub-scripts
- 10 header/footer
- Page numbering in decimal or Roman numerals
- Margins and headers can be set different for even and odd pages

**\$69.95** with source **\$124.95**

## XMERGE

Mail merge capabilities for XWORD

**\$24.95** with source **\$49.95**

## XSPELL

OS-9 spelling checker, with 20000 and 40000 word dictionaries

**\$39.95**

## XTRIO

XWORD/XMERGE/XSPELL

**\$114.95** with source **\$199.95**

## XED

OS-9 full screen editor

**\$39.95** with source **\$79.95**

A null-modem adapter is just a small box with a DB-25 connector on each end and some internal wiring to facilitate communication between two devices. The adapter connects the necessary control signals of each computer to simulate a connection with a modem or other DCE device. Additionally, the adapter crosses the send-data and receive-data lines so each computer can send and receive data on the appropriate lines. Without this adapter, things would be a bit more complicated.

To use this adapter, plug one end of the RS-232 cable into one of the RS-232 packs, plug the other end into the null-modem adapter, and insert the adapter into the second RS-232 pack. Crank up your favorite terminal program on each computer, and the two computers are directly connected and ready to communicate.

### Different Computers

Most computers use a standard DB-25 connector to interface with the outside world. This is what I use when I want my Tandy 102 to talk to my Color Computer. To connect another computer to the CoCo's serial port, we'll need to construct a suitable cable. Specifically, we'll need a CoCo four-pin DIN plug on one end of the cable and a standard male DB-25 connector on the other end.

It is sometimes possible to find a usable cable at your local Radio Shack, but it is no longer a standard catalog item. If you choose to construct your own cable, here is the necessary equipment:

	CoCo DIN	DB-25
Function	Plug	Connector
Carrier Detect	1	-
Receive Data	2	3
Signal Ground	3	7
Transmit Data	4	2

The Tandy 102, like many other computers, uses a maximum of seven pins in its RS-232-C interface port. The additional functions of Request to Send (RTS), Clear to Send (CTS) and Data Terminal Ready (DTR) are seldom required for the simple communications interfaces we're using. When we use a true RS-232 port, however, these signals must be properly connected. This

is the function of the null-modem adapter.

You'll find some variation between the different computers regarding required control signals, so it's always best to consult the owners manual for each machine. If the other computer simply refuses to begin communication with the CoCo, experiment by connecting the DB-25 connector's Pin 20 to Pin 8. This sometimes forces the other computer to acknowledge a carrier detect signal, which in turn allows it to function correctly. Your owners manual should explain this.

As we did earlier, connect the two computers with the cable and null-modem adapter. Plug the DB-25 connector into the null-modem adapter, and plug the adapter into the other computer. Insert the four-pin plug into the CoCo's serial port and start up the appropriate terminal software for each computer.

If you choose to use your RS-232 pack to talk with the other computer, simply use the RS-232 cable and null-modem adapter as you would when using two RS-232 packs.

### MS-DOS Machines

Interfacing to the PC-compatible machines involves a little trick, but the technique is still nothing exotic. Because the PC compatibles use a male DB-25 connector rather than a female connector for the RS-232 port on the rear of the computer, you must purchase a "gender-changer" adapter, which is available from Radio Shack for \$7.95 (Part No. 26-1495). Use this with the null-modem adapter and either of the cables described (depending upon your particular hardware).

The shareware program, *ProComm*, is probably the most popular terminal program for the MS-DOS engines, yet it requires a little trickery to get it to work without a modem. We need to convince the terminal program that the carrier detect is active (as it would be if we were using a modem).

The easiest way to do this is to install a jumper from Pin 8 to Pin 20 inside the cable connector attached to the PC compatible. This jumper connects the DTR line from the PC compatible (normal when using *ProComm*) to the carrier detect (CD) input. At this point, *ProComm* is ready to communicate with the other computer. This type of trickery may be required when using

other PC terminal programs as well. Check the documentation to be sure.

### General Notes

Of course, hardware hackers will notice that a null-modem adapter could be incorporated into the design of the cable, and that a gender-changer isn't required for use with MS-DOS machines if you choose to replace one connector with another. However, the intent here is to use standard adapters and make the techniques available to most users.

If you plan on interfacing with a lot of other computers, I recommend that you purchase an RS-232 Mini-Tester from Radio Shack. This small unit, priced at \$14.95, is a great time-saver. It gives a quick visual indication of the state of each line in the RS-232 interface using red and green LEDs.

It's usually wise to use terminal settings of 8-bit, 1 stop bit and no parity on each computer, because some terminal programs will not automatically adjust to these settings before beginning a file transfer. (These settings are required when using the popular file transfer protocol, Xmodem.) You must also use the same baud-rate setting between the two computers, or communications will be totally garbled and impossible.

Half-duplex operation is usually preferred, especially if two computer operators will be typing back and forth to each other. In half-duplex mode, the terminal software will echo each key-stroke to its operator. On the other hand, if the computer is operating in full-duplex mode, the operators will type blind because they will have no way of seeing the characters they are typing.

If the two computer operators intend to type to each other, it's also wise to adjust the terminal settings to *insert-linefeeds* mode. If this isn't done, the lines may overwrite each other on the screen. The documentation for the particular terminal program will explain how to do this.

Finally, use protocol transfers whenever possible. Even when transferring ASCII text files, it's best to use an error-checking protocol such as Xmodem to provide maximum protection from errors.

Now you can connect your CoCo to your PC compatible. Enjoy the benefits of both machines with a wider selection of files.

## Delphi Bureau

Effective this issue, I will be assuming responsibility for "Delphi Bureau" from Cray Augsburg (CRAY). Cray has been writing the column since April, 1986, and now retires with our thanks. Don't worry. Cray will remain as the technical liaison between Delphi and THE RAINBOW. If you have a topic that you would like covered in this column, please contact me through Delphi's Mail system under the username DONHUTCHISON.

### Person To Person

Delphi's newest SIG, Person To Person, is now open. This newest SIG is intended as a place for people to meet. It is accessible from the Entertainment menu, and can be found by typing GO ENT PER from almost anywhere in the Delphi system. SigOp Shannon Yoffe (SHANNONY) cordially invites everyone to stop by. Just sit anywhere.

One of the features of Person To Person will be the photo library. We're encouraging our members to post pictures of themselves in the database for others to view. Naturally, not everyone can digitize his or her own picture, so we have arranged for that to be handled for you. James Farmer (MODEMMASTER) will be more than happy to digitize your photo and post it in the SIG's database. James just needs a good photograph (the bigger the better), and he'll take it from there. Send your photo to James Farmer, 5311 Barwick Road, N. Charleston, SC 29418. If you want your photo returned, please include an SASE suitable for photos. Remember to add at least one sheet of cardboard or some other stiff material so your photo won't get crushed or bent in the mail.

James also invites calls from those who want more information about digitizing. You may contact him at (803) 552-2837. Please remember that this is in the Eastern time zone, and avoid calling during odd hours.

### The Portable Place

After a bit of restructuring, the Portable Place is now open under the spon-

Don Hutchison is an electrical engineer and lives in Atlanta, Georgia. He works as a senior project engineer involved in the design of industrial control systems. On Delphi, Don is the Database Manager of the RAINBOW CoCo SIG. His Delphi username is DONHUTCHISON.

New faces, new places  
and a discussion on  
computer viruses

# Haven't I Seen You Before?

By Don Hutchison

Rainbow CoCo SIG Database Manager

sorship of PCM. The Portable Place is dedicated to laptop computers such as the Tandy Model 100/102, 200 and 600, and the NEC portables. SIG staffers include **Marty Goodman** (MARTYGOODMAN) as house doctor, **Jim Reed** (JIMREED) as key grip and me as chief engineer. We cordially invite you to stop by.

In cooperation with PCM, THE RAINBOW's sister publication, we will have available the programs for portables from PCM ON DISK. We plan to post

these files each month in a special topic of the database, where they will be available for instant access via downloading. These programs will each carry a \$3 surcharge.

### View Master

**David Mills** (DAVIDMILLS) has posted an outstanding graphics-viewing utility on the CoCo SIG. David's program, *View Master*, allows a CoCo 3 user to view most popular types of pictures using a single program. No more scrambling around when you want to view a particular picture — just run *View Master*. Look for it in the CoCo 3 Graphics topic of the CoCo SIG's database, and in the General topic of the database inside People To People.

### Viruses

Lately, there has been a lot of publicity about the computer hazards known as *viruses*, *time bombs*, *Trojan horses*, etc. Do viruses really exist?

Yes, definitely. Some, of course, are tamer than others. We've all heard stories about a bank programmer who installed a short program into the bank's system which transferred fractional-cent values into his own account. When discovered, he had more than \$30,000 in his account, which had accrued simply from the interest calculations on passbook savings accounts.

# Database Report

The General Information topic of the database includes **Chris Burke** (COCOXT), who uploaded a product announcement for Burke & Burke's new *RSB* (which lets you run Disk BASIC programs under OS-9 Level II), and **Brian Wright** (POLTERGEIST), who uploaded a text file that describes some bugs in the Microware C compiler.

In the Applications topic of the database, **Paul Jerkatis** (MITHELEN) posted a *Star Trek* program in BASIC09. **Robert Grubb** (GRUBBY) uploaded a BASIC09 program for determining loan payoffs, and **Steve Clark** (STEVE-CLARK) posted an electronic mail system — including the source code.

In the Utilities topic, Brian Wright provided us with a disk editor for OS-9 Level II, which was written by Pete

Lyall. **Jeff Blower** (SEBJMB) posted *SetColor*, a utility that enables the user to change foreground, background and border colors by pressing a single key. **Mike Stute** (GRIDBUG) posted a clever utility called *Insulter*, which randomly displays insults to the user, and **Brian White** (BRIANWHITE) sent us a program that will duplicate a file or directory at another location on the same device. It uses an OS-9 feature not implemented by other commands.

Brian Wright also uploaded a text file by Pete Lyall in the Patches topic of the database. This file describes how to modify the RS-232 pack to enhance telecommunications or use with an external terminal. Brian posted another file from Pete Lyall that will patch ACIAPAK's variable

However, authors of viruses for personal computer systems are probably out to destroy your data.

Just what are these things, and what can we do about them?

A computer virus is usually a small program that is hidden in some manner. (It may even be a part of a larger, innocent-looking Trojan horse program. An earlier name for computer

viruses was worms.) A virus has the ability to duplicate itself and to travel to another computer through the transfer of disks or by electronic means. It may have the ability to hide within your computer for days, months or even years before activating itself. Maintaining good backup procedures doesn't prevent viral spread, because a timed release virus can also be in the backup

disk or tape. Therefore, the virus is capable of destroying your data time after time.

Although Trojan horses are usually programs designed to transmit a virus into computer systems, they may be destructive programs on their own. Just as the ancient Greeks captured Troy by hiding hundreds of soldiers inside an innocent-looking wooden horse, such a

space to allow more efficient I/O at speeds above 1200 bps. **Merle Kemmerly** (TOOK3) posted a patch, for ACIAPAK under Level 11, that increases the input buffer to 140 bytes to help those operating at the faster baud rates. **Dave Philipsen** (DPHILIPSEN) posted a file to fix the seven-bit Xmodem bug in version 1.0 of the terminal program, *SuperComm*. For the *Microscopic Mission* game Robert Grubb posted a patch file that allows the game to run from the current execution directory. (This also allows it to run from a hard disk.) **Larry Oheron** (LOHERON) sent us a file describing how to set up *DeskMate 3* to run from a single disk.

The Telcom topic gives us Merle Kemmerly, who uploaded Version 3.2 of the popular terminal program *Telstar*; **Jim Hollier** (PGJTM), who posted Version 3.1 of *Jterm*; and **Dave Philipsen**, who uploaded *SuperComm*.

In the Graphics & Music topic, **Mike Knudsen** (RAGTIMER) uploaded his arrangement of a familiar tune. **Dennis Weldy** (OS9ER) uploaded a revised version of QuadDump, a printer driver for the Quad Jet color printer. Steve Clark posted a tongue-in-cheek drawing of the Color Computer and its Multi-Pak Interface.

The Programmers Den topic includes Brian Wright, who uploaded a file that describes the inner workings of the *Citadel* BBS package and the source code for that package. Mike Stute uploaded Part 2 of the C standard library.

In the Tutorials & Education topic, Mike Stute sent us an article on dynamic allocation and doubly linked lists. Brian Wright uploaded a tutorial on OS-9 concepts, while **Andrew Ellinor** (CROPPER) sent us his text file containing an introduction to OS-9. **Kevin Darling** (KDARLING) posted a text file concerning the Multi-Pak Interface and the Deluxe RS-232 Pak.

**Garbarini** (F19) posted a picture of a sunset. I uploaded the CoCo Gallery Live pictures from the Chicago RAINBOWfest. **Donald Ricketts** (STEVEPDX) uploaded approximately 60 digitized images that he had converted from DS-69B format into *CoCo Max 3* files. Donald's pictures are always quite popular. David Mills posted a very popular viewing utility that will allow its user to view all major types of picture files. David also uploaded another adult picture from Brad Bansner. **John Barrett** (JBARRATT) posted several pictures of his favorite rally cars, and **Richard Trasborg** (TRAS) uploaded over one megabyte of clip art for use with *Max-10*. These files, drawn by Mike Trammell, have been very popular.

The Source for 6809 Assemblers topic of the database gives us **Mike Ward** (MIKEWARD) uploading the source code that details how to perform disk I/O from assembly language. This file will be extremely popular with all aspiring assembly language programmers.

In the Utilities & Applications topic, **Stephen Macri** (DRACMAN) uploaded his *Alicia Calendars* programs. **Robert Pierce** (RPIERCE) posted a revised version of his popular disk editor and a 51-by-24 Hi-Res screen driver for the CoCo 1 and 2. **Tom Wywick** (WYRICK) uploaded a program to assist in converting CoCo BASIC programs into IBM-compatible ones. **Mike Sweet** (DODGECOLT) sent us his favorite disk editor, and **Jim Shoop** (BAZAR) uploaded a patch for *MAX-10* to eliminate the need to use the "clicker." While Brian White posted a high-speed disk backup utility, **Pierre Salvail** (PSALVAIL) sent us a useful smooth-scrolling utility for the CoCo 3. **Seth Short** (SETHSHORT) provided a universal picture conversion utility. **Fred McDonald** (FRED-MCD) sent us a program for printing large banners on your printer and a search program for cross-referencing BASIC programs. **Richard Trasborg**

uploaded a VCR tape-cataloging program written by his wife. Finally, **Billy Passauer** (INDIANABILL) uploaded Version 1.5 of the *File Copy Express*, a utility that allows wildcards during the copy operation.

In the Hardware Hacking topic, **Marty Goodman** sent us a file describing a bug in the RS-232 Pak and how to fix it. **Bob Smith** (HIBARBAREE) sent us a file describing how to use a Diablo printer with the CoCo, and **Robert Pierce** sent us a *CoCo Max 3* picture containing a CoCo 3 memory map.

The Games topic includes **Colin McKay** (COLTNKCKAY), who uploaded his *Racko* and *Sea Battle* games, and **Tom Wywick**, who posted a dart game and a *Wild Party* game.

In the Classic Graphics topic of the database, **Tom Wywick** uploaded his graphics editor, and I was busy posting the CoCo Gallery pictures for September '88, as well as those published from October '85 to May '86.

The Music & Sound topic gives us **Mike Carey** (SPOOLFRAME), who uploaded fifteen more of his very popular *Lyra* files, and **Mike Stute**, who posted two more of his personal favorites.

In the Product Reviews & Announcements topic, **Chris Burke** uploaded a product announcement for the new *Burke & Burke RSB*. **Donald Ricketts** posted his review of the CoCo 3 version of *VIP Database*.

In the Data Communications topic, **Tom Wywick** uploaded a data communications course composed of several BASIC programs, and a driver package for would-be BBS SysOps. **Robert Combs** (ROBCOMBS) uploaded two versions of *Phone Clone*, one for each model of CoCo 3. Rob also sent us *MultiLink*, a program to link the serial port with an RS-232 pack and enter a CB mode. **Donald Ricketts** uploaded a patch for *Ultimaterm* to adjust the program for 40-track disks.

## CoCo SIG

In the CoCo 3 Graphics topic, **Mark**

program can wreak havoc within your system.

Another hazard, the time bomb, is a program that *blows up* a computer system after a certain interval of time following its installation. A programmer who was fired from a company might leave such a bomb in the system as a form of revenge. These bombs may do relatively simple things (like displaying a clever message on the programmer's birthday), or they may maliciously destroy thousands of important records. Some time bombs will activate themselves at repeatable intervals (like every two or four days after a disk has been infected). The results are varied, but they may include any of the following: printer/display problems, system crashes, or the malfunction of peripherals.

Viruses have been reported for all major brands of computers. Currently, those with IBM compatibles are the most vulnerable, but the potential threat is very real. One factor on our side is that viruses must be specific to the particular machine. (For example, an IBM virus cannot install itself into a CoCo environment.)

In practice, a user is not totally safe unless he never uses his computer. The possibility of a computer viral infection cannot be completely eliminated.

While there are all sorts of infectious agents that can invade your computer, the CoCo is more resistant to such attacks than many other machines. Because the CoCo uses a ROM-based operating system and the system exists as unalterable firmware, permanent change is virtually impossible. This provides a great deal of security for most CoCo users.

The CoCo 3 is a slightly different case since the operating system is transferred to RAM at start-up. This makes it vulnerable to modification by a virus program. It would be rather easy, for example, to patch the CoCo 3's operating system and destroy the allocation tables and/or directory of a disk after a certain time or after a certain number of disk accesses. Fortunately, the CoCo 3's operating system is "refreshed" at each cold start, so a virus couldn't live permanently in this system as it could on other systems.

Those of you using OS-9, however, are susceptible to viral infection. Be-

cause OS-9 is a disk-based operating system, it is as vulnerable as MS-DOS or any other disk-based operating system. At present, there are no authenticated reports of a CoCo OS-9 virus. Much of this can be attributed to the CoCo OS-9 user, who is usually more interested in the operating system itself rather than in childishly damaging someone else's system.

Although real viruses have been created for MS-DOS machines, these are somewhat rare. Generally, when someone *thinks* a problem is due to a virus, it is actually due to software misuse, damaged software or a hardware failure of some sort.

Since viruses can be created to merge with and contaminate the operating system in any of a number of ways, there does not seem to be any practical means of "protecting" our users against possible viruses. All we can do is carefully examine any report of problems that might be associated with a program someone has downloaded from the database. Please notify the SIG staff if you suspect a program may be other than what it appears. We'll all be glad to help out.

See you online on Delphi!

## The CoCo XT and CoCo XT-RTC Hard Disk Interfaces

The CoCo XT Interface uses advanced "NO HALT" hard disk controllers, which do not halt your CoCo and do not disable or use interrupts during hard disk access. You get full type-ahead, and the system clock does not lose time during hard disk access. Fully compatible with most RS-232 expansion port(s).

### *Great for Multi-User Systems*

The CoCo XT hard disk interface lets you connect up to 2 low cost, PC compatible 5-120 Megabyte capacity hard drives to your CoCo. You buy the drive, Western Digital WD1002-WX1 or WD1002-27X (RLL) controller, and a case from the PC dealer of your choice. Just plug them into the CoCo XT, plug the CoCo XT into your Multi-PAK, and you have a 20 Meg OS9 hard disk system for under \$450!

We've sold hundreds of these affordable, high-performance hard disk interfaces to a very hot Color Computer market in a single year! This year, 1988, is "The Year of the Hard Disk" at Burke & Burke.

CoCo XT (with anodized housing, 60 page user manual, hard disk back-up utility and new, Version 2.3 drivers for use with both HYPER-I/O and OS9) \$69.95.

CoCo XT-RTC (same features as the CoCo XT, and includes a real-time clock / calendar with battery backup) - \$99.95

**THE PROFESSIONAL TOUCH: XT-ROM** - Automatically boots and reboots OS9 from hard disk. Installs in your hard disk controller's BIOS ROM socket - \$19.95.

## HYPER-I/O: BASIC runs hard drives, big floppies, and more!

You or someone that you know may have the 35 Track Blues. It strikes hundreds of CoCo users every year. One day you wake up, and say to yourself, "These 35 track floppy disks are just too small." There's only one cure. More storage. Get it. With HYPER-I/O, from Burke & Burke.

### *Now compatible with DISTO and LR Hard Disks*

HYPER-I/O modifies the RS-DOS Disk BASIC in your CoCo 1, 2, or 3 to provide a "Dynamic Disk Interface". Use your existing BASIC and RS-DOS software with hard disk interfaces (CoCo XT, DISTO, LR), RAM Disks, and any mix of floppy drives from 160K to 720K each. Fully RESET protected, user configurable, expandable, OS9 compatible, EPROMable HYPER-I/O is becoming the system of choice for the CoCo 1, CoCo 2, and CoCo 3. HYPER-I/O Version 2.5 now available only \$29.95. HYPER-III (RAM Disk and Print Spooler for CoCo 3 HYPER-I/O) -- \$19.95

**Wild & MV Version 2.1** Use "wildcards" with most OS9 commands, or rearrange your directory tree. Features recursive directory searches. A hard disk must! **\$19.95**

### *Check out these OS9 Utilities*

Tools to let you spend less time fighting OS9, and more time using it.

**EZGen Version 1.04** Powerful OS9 bootfile editor. Change module names, add or delete modules, patch bytes, or rearrange modules. Works on other files, too. **\$19.95**

**Burke & Burke**

P.O. Box 1283 Palatine, IL 60078-1283 (312) 397-2898

ILLINOIS RESIDENTS PLEASE ADD 7% SALES TAX.  
COD's add \$2.20. Shipping (within the USA) \$2.00 per  
CoCo XT; \$1.50 per disk or ROM. Please allow 2 weeks  
for delivery (overnight delivery also available for in-stock  
items). Telephone orders accepted (312) 397-2898.

*You see the glamour, let me tell you about the work . . .*

# So You Want to Be a SysOp

By Dave Jenkins

**M**any bulletin board users consider becoming a System Operator (SysOp), and some will start BBSs. Often, however, these new SysOps grow discouraged by the unanticipated problems and time demands of a properly running BBS. This article is intended to help the prospective SysOp make an intelligent decision.

As a potential SysOp, you must have the right personality and experience before going online. You need the patience to answer questions from users. Perhaps you've answered that same question a hundred times before, but the person asking doesn't know that. You also need to know how to program, and how to use such things as a disk zapper. A little electronics knowledge can also be helpful.

You should have plenty of spare time — being a good SysOp takes a lot of time. I spend about an hour a day working the system, and an additional two or three hours updating files on Sunday mornings. Because most people don't have a large enough system to adequately run a BBS, you may need to update your equipment, so you'll need some money. You'll also need a second telephone line, which (depending on where you live) can be expensive.

Before you decide to put a BBS online, you should ask yourself if you really want to do this. Don't answer too quickly. Remember

---

Dave Jenkins is an engineer at WNIN-TV/FM in Evansville, Ind. He has been a System Operator for four years and is BBS section leader on Compu Serve's CoCo Forum.

that your computer will be tied up while the BBS is online. When you want to use the computer, someone will probably be online. If you are into gaming, or use your computer for many other things, you will probably regret starting a BBS.

You must also remember that most areas have several BBSs. If you want to be a success, you must find a need and fill it. Don't duplicate the other BBSs in your area. Find out what is needed in the community and do that. For instance, in my area no BBS supported graphics in a format that several computers could use. I started putting RLE (run length encoded) graphics online. These can be viewed by almost all the popular home computers. This has been very popular, and other BBSs in town have started posting RLE graphics as well. You might also want to offer online games, role playing games, specialized message bases or downloads.

### Choosing Hardware and Software

You need to decide what hardware and software to use. If you have a spare computer system sitting around gathering dust, it would be a prime candidate to run your BBS. I don't suggest putting new hardware online until you are

certain that it works properly. An online BBS is a poor place to discover manufacturing defects.

If your software supports it, I recommend going with a 300/1200-baud modem. The 1200-baud modems cost less than 300-baud modems did just a few years ago. About one-third of the users on my system are 1200 baud, and more are moving in that direction. (In fact, if your hardware and budget can support it, I would go with 2400-baud service.) You should support at least 300- and 1200-baud modems. Get a fully Hayes-compatible modem. The Hayes command set has become a de facto standard among modems, and it cannot hurt to follow the standard. You may be able to get by without it, but it may hinder a future upgrade. It is cheaper to buy it now than to buy a second modem later.

You can find BBS software in two ways: shop for commercial BBS software or download free BBS software from Delphi or other networks. In either situation, talk to SysOps who use the software for an accurate judgment of the software's quality. Software sold commercially is not necessarily bug-free. Call running BBSs to get a feel for

the software from a user's standpoint. No matter how you find the software to run your BBS, it should support Xmodem up- and downloading. Your system will be severely restricted without it.

A good BBS should have at least four drives. Although I have run systems with two drives, and you can start at that point, you should expand to as many drives as possible. No BBS in existence has too much storage space. The more you have, the more you can offer your users. Plan to continue upgrading your system.

A 64K CoCo makes an excellent BBS computer, particularly when it is outfitting with the RS-232 pack. A 512K CoCo 3, which allows two RAM disks online, is also an excellent choice. My system is a 512K CoCo 3 with a Multi-Pak Interface, an RS-232 pack, four floppy drives and an Avatex 1200 modem. My future upgrades will include moving to either double-sided or quad-density disk drives and the OS-9 operating system. The upgrading never ends.

You might want to buy a used system from someone for your BBS. If you can find the right package deal, you can get a system going for a reasonable price

## Looking for "The Answer"?

Gain access to the vast warehouse of information stored in your "non-conscious" mind through your computer keyboard.

There are mini-programs or circuits in everyone's "non-conscious" mind which will enable them to accomplish remarkable things. In order to utilize these mini-programs, a bridge of communication must be established between the conscious and the "non-conscious" parts of the mind. Six years of research and development have resulted in a proven aid for establishing this bridge.

"The Answer" is a software package which aids you in communicating with your "non-conscious" mind to solve questions and difficult problems in a question/answer format. It utilizes graphics and optional user-programmable subliminal messages to strengthen the communication bridge.

Ask your questions...seek the answers...EXTERNALIZE THE RESULTS via automatic disk-stored record and optional print-out.

**Order now for only \$29.95** (+\$3.00 S/H) no C.O.D.

## SolidDrive™ by Vidicom Corp

**SolidDrive™** - a ramdisk that doesn't forget! Fully Static, battery backed CMOS ram makes SolidDrive™ ready to use instantly. You can forget formatting and copying work files to ramdisk then copying back your changes to floppy. You can forget fear of power failures. The instant power loss occurs, SolidDrive™ write-protects itself and your valuable work. SolidDrive™ gives you state-of-the-art surface mount technology. That's why we have the best guarantee in the industry - Two years limited repair or replacement! SolidDrive™ is compatible with Multi-Pak® and comes complete with OS9® Level 1 or 11 device driver, formatter and self-test software. Available in 512K and 1 Megabyte versions. Factory upgrades available for 512K version, RSDos Driver now available, treats SolidDrive™ as 3 or 6 SSDS RS devices (4-6,4-8). Disk loaded version free on request! 27C64 EProm version \$19.00

and keep your CoCo as your main computer. Don't rule out systems from other manufacturers. You might find a great bargain and learn something in the process.

### Getting a Telephone Line

Many new SysOps try to begin running their BBS on their residence telephone line. I do not recommend this practice. Some users will ignore or forget your hours of operation and call when the BBS is down. And, while your BBS is online, no one can call you.

Telephone company rules vary widely from area to area. Some companies try to charge BBSs business rates instead of residential rates. Try to get *measured service* for your BBS line. Measured service limits the number of free outgoing calls and adds a surcharge for each call made beyond that number. Since most, if not all, calls will be incoming, this should not be a problem. Please remember that some telephone companies will not allow a measured service line in your home if you also have a standard line.

You can save money on installation if you can do your own interior wiring. Telephone wiring is not difficult. There are several books available that explain how it is done. Our telephone company charges \$36 an hour for installation, so it pays to learn how to do your own wiring.

Before going online, you must also decide whether or not your BBS is free to the user. Charging for access creates other considerations. Every subscription BBS SysOp I have talked to has problems with users sharing one password. I know of no solution to this problem except charging for connect time. You will also have to take care of bookkeeping and keep track of subscription expiration dates. If you charge for access, the telephone company may also consider your BBS a business and charge you business phone rates.

Require that callers use their full names online. While handles can be fun, they can create a lot of problems. Most BBSs in my area that allowed handles didn't stay online very long because of troublemakers who hid behind the handle. Requiring full names reduces problems.

### Ready to Go Online

Let's assume that you have the hardware and software ready and the telephone line is installed. You're ready to go online. What problems can you anticipate?

First, you can expect hardware problems. Running a BBS puts a heavy strain on your equipment. Expect to have your disk drives aligned and cleaned at least once a year. The drives are the weakest point in your system because they are the only mechanical part. The rest of your system is electronic and should be fairly reliable, unless there is a lightning strike, overheating, or some other severe condition.

Get surge protectors for the power and telephone lines coming into your system. These devices may cost you \$50 to \$75, but the insurance is worth the investment. If it saves you from just one lightning strike, a surge protector will have paid for itself.

Your computer should not share an electric circuit with a heavy-duty appliance (i.e., your refrigerator, washer or dryer). These devices draw a large amount of current when starting, which reduces voltage and could cause a crash. You might also look into ventilating fans for the computer, especially during the summer in a room without air conditioning. Never cover the ventilation areas while the computer is on.

Unless you absolutely need it on, turn your monitor or TV off while the BBS is in operation. The screen images can burn into the CRT. This damage is permanent, expensive to repair and completely avoidable. One SysOp I know bought a used black and white TV to use as a monitor. It made an adequate picture, cost little and was a good choice for the purpose. He left it on all the time, but since it cost so little, he didn't care about raster burn.

A little electronics knowledge can help keep you online. For instance, if parts have visible damage (charring or swelling), knowing how to pull the cover off the equipment, recognize a damaged part and replace it can save you money and keep you online.

Develop a good relationship with the service manager at the nearest Radio Shack Computer Center. If your problem is relatively simple to fix and you bring the unit in for repair, the service manager may expedite the repairs for you. Be subtle when you make such a request. Instead of applying pressure, tell the manager that your BBS is down and that you need your equipment back as soon as possible. If you have a good relationship with the service center (and the shop is not overloaded) your repairs may be moved ahead. Remember, though, we all feel that our repairs are top priority, and sometimes we may have to accept the wait.

Preventive maintenance is also important. Every week, you should clean your edge connectors and your drive heads to prevent corrosion. Radio Shack chose not to use gold edge connectors. You'll need to turn off everything, take the disk controller apart and clean all the edge connectors by rubbing them gently with a pencil eraser. Do the same on the back of your drives. Clean your drive heads with a wet head-cleaning system. (The dry cleaners are abrasive and their use will shorten head life considerably.)

### Protecting Yourself From Trouble

You have certain legal obligations as a SysOp. You are responsible for the messages posted on your BBS. Two SysOps in my area were convicted for allowing telephone access codes to be posted. Not only did they face jail sentences, they also had to pay thousands of dollars in legal bills and had to pay the telephone company involved \$3,000 in restitution. Unless you like the idea of going to jail for your hobby, avoid posting credit card numbers and telephone access codes.

If you decide to post downloads, only post software and material that you know are either public domain or free ware. You may not post any of the following: software from magazines like THE RAINBOW, commercial software and copyright software not authorized to be posted by the author. Many people believe that if they download something from another BBS, they may post it on their own system. That is not true. It is entirely possible that a SysOp could be held responsible for lost sales if software is illegally posted. The risks involved are not worth the effort. Do not post anything uploaded to your BBS until you are sure you have the right to do so.

When uploading, watch for a Trojan horse. This is software disguised as one thing that is designed to do another — usually erase your disks. I have not run into this problem in the CoCo BBSs, but there are some nasty programs floating around the MS-DOS world. Test the upload thoroughly before posting it. Don't post anything that you have not personally run, unless you are confident of the source.

If you wish to post a file from one of the commercial online services (like Delphi) check with the service in question regarding its policies. If it finds that you are violating its rules, your membership can be revoked.

Try to establish friendly relations with other local SysOps. In our area, we

have formed a Council of SysOps. The purpose is to share information on problem users. In extreme instances, a user could be booted off every member system in town. We have no actual meetings. One of the boards has a message base restricted to SysOps, and we share information there. Don't war with other SysOps, if it can be avoided. Cooperation can help everyone.

I don't have a hard and fast rule about verifying users. My area doesn't have many problem users, (and the Council of SysOps keeps everyone informed about troublemakers) so I don't voice-verify unless something raises my suspicions. All users must leave their full names and addresses to gain access. Of course, someone could leave a phony name and address, and unless you verify you won't know.

You should make daily backups of your online disks. Sooner or later you will have a disk crash. I had a power line surge that wiped out all my online disks. Fortunately, I had backups from the previous night, so I went to those and left a message about "stepping into the BBS zone, moving back in time to yesterday." It is bad enough to have to use your backups, but it is embarrassing

if your backups are a few days — or even weeks — old. Before going to bed, back up your disks. It is not a matter of if you will have a crash, but when. You will have a disk crash sooner or later.

Disk wear out. You can save a few pennies by buying bulk disks, but I have found that many of these wear out quickly. Computers are such popular items that discount stores often sell brand-name disks for as low as \$6 per box of 10. Try to determine an average time that a disk will last on your system. Then, as a normal part of operations, replace your online disks *before* that time. For instance, if disks last eight weeks, replace them every six weeks. Keep the replaced disk for other things, but not for online use.

You may also run into a system crasher. Security is a function of software, but some BBS programs have *back doors* that allow someone to avoid the usual security. These back doors should be eliminated entirely. I am using the CoBBS system, which turns off the modem if BASIC is entered. I have also disabled all disk commands that are not used (such as DSKINI, DOS, DSKD\$, SAVE, COPY, BACKUP and DIR). Even if

users could get through to BASIC, they still could not read any files or even see a directory. Keep in mind, however, that no system is completely secure. Your best insurance against destruction is still frequent backups.

### A Few Final Tips

If you are still interested in running a BBS, I have a few suggestions that should make the responsibility a little easier. First, don't underestimate the intelligence of your users. They deserve your respect. Second, if you're going to take the BBS down to do something else on your computer, take the BBS phone off the hook and restrict your use to an hour or so. Incoming callers will get a busy signal (which indicates that the BBS is in use) instead of a ring with no answer (which indicates that the BBS is down). Third, keep in touch with the other BBSs in your area. Call them frequently, and read their message bases to find out what is on people's minds. Finally, have fun. □

**EZ FRIENDLY**

For  
Your  
CoCo  
1, 2, & 3

# EZWriter

"EZWRITER" does professional-quality letters quickly and easily. "EZWRITER" will automatically set the margins & characters per line, indent paragraphs, put your heading/greeting/closing in the right places, and even center the letter on the page! Just type your message and watch your DMP or DMP print a perfect letter!!! Handles 1 - 4 page letters, mailing lists, and labels. It will make it possible for you to send any number of copies with a salutation for each recipient!! Perfect for personal correspondence, for letters to club members, or for direct mail advertising. "EZWRITER" is by far our #1 Best Seller, and it's no wonder; it's the absolutely simplest letter writing system available for the CoCo! Still only \$19.95 plus \$1.50 S/H for either disk or cassette. GREAT on the CoCo 3 but will run on any CoCo with 32k ECB.

**E.Z. FRIENDLY SOFTWARE**

**"I cannot imagine the CoCo 3 without ADOS-3; it would not be a complete machine."**

**The RAINBOW, July 1987**

You've moved up to a CoCo 3. A powerful new machine. Now, it's time to give BASIC a shot in the arm, with ADOS-3. Wouldn't it be nice to run on your machine and be greeted by an 80 column display, in the colors of your choice, with your own custom startup message? To run real-time at 2 MHz (double speed) without having to slow down for disk and printer operations? This and much, much more is possible with ADOS-3, our CoCo 3 adaptation of the acclaimed original ADOS, which shares the original's virtual 100% compatibility with commercial software. After customizing ADOS-3 using the provided configuring utility, you can have it burned into an EPROM that plugs into the Disk BASIC ROM socket, or just use it in RAM as a disk utility. (EPROM + burning will cost \$15-20; we provide information concerning how you can have this done.) Supports double-sided drives (35, 40, or 80 tracks) FAST and SLOW commands, auto line number prompts, RUNM command, keystroke macros, arrow-key scroll through BASIC programs, auto-edit of error line, and many more valuable features.

**"ON A SCALE OF 1 TO 10, I RATE ADOS-3 A SOLID 15."** RAINBOW, 7/87  
Disk \$34.95 Original ADOS for CoCo 1 or 2 , \$27.95 (See 6/87 RAINBOW review)  
Original ADOS plus ADOS-3 ..... \$50.00

**M**any people do not realize that truly good readers train themselves to adjust their reading speed to suit each reading situation. Flexibility in approaching different kinds of reading materials requires training and practice. Like the driver of a manual-transmission automobile, a reader must learn to shift speeds at appropriate times.

A good reader learns to read faster when skimming and slower when reading for details. When skimming material, good readers do not read every word. They concentrate on reading for the thought or the main idea rather than on the individual words. Good readers also know that they must slow down their reading speed when details and concentration on the material are demanded. Words must be studied for their meaning; passages may have to be reread.

This month's article presents a reading exercise suitable for middle school to adult education students. Its concept and appeal are important at all stages of life, and the exercise affords practice in careful, detailed reading of a short passage.

The short story presented below requires slow, careful reading. In this age of fast food and instant anything, students often want immediate results from everything they do. It would be difficult to skim the passage below and come up with a suitable map of the story details. The story is constructed to force students to slow down and read the story carefully.

The following are the directions for this exercise and the passage to be read by the user:

Read the following short story carefully. Try to visualize the route of the car. Then draw a rough map of the route showing the landmarks that were mentioned.

Last weekend, we were driving north through a small, unfamiliar town. It was lunch time and we were getting hungry. We knew that in this town, there was a wonderful pizza restaurant on Main Street. We asked a young lady how to

Steve Blyn teaches both exceptional and gifted children, holds two master's degrees and has won awards for the design of programs to aid the handicapped. He owns Computer Island and lives in Staten Island, New York.

### Reading for detail

# You Can't Get There From Here

By Steve Blyn  
Rainbow Contributing Editor

get there, and she gave us the following directions:

"You are now going in the wrong direction. You will be able to make a U-turn two blocks up this street. Then go south on this street until you pass a library on your left. Three blocks later, you will see a gas station on your right. Make a left turn at the next intersection. Go on for about twelve blocks until you reach the first traffic light. The road forks at the light. Take the right fork. Keep going until you reach the next crossroads. You will see a school on your left. Turn right at the crossroads,

before you reach the school. You will then be on Main Street. The restaurant will be on your left a few blocks down the street."

Our program presents a low-resolution map of the story and illustrates the route that the car should take. On the left of the screen is a guide for counting the number of streets or blocks indicated.

Run the program after the student has read the story and produced a map. The computer screen is compared to the student's representation. The student should use this comparison to learn why any mistakes were made. Students may want to reread the passage after comparing their maps to the computer representation.

Have your students repeat the program after several days. You can then compare the results of the newly created map with the original. While slow, careful reading is not easily accomplished in our fast-paced society, results should improve with each succeeding session.

Use this program to produce other practice passages for your children or students. Alter some of the directions and make the necessary changes in the program for the new map. Better still, try to create a new town map with its own directions. We hope that you and your students enjoy and benefit from this program. See you next month. □

Making a list? Checking it twice? Before you send it off to the North Pole you should check out our holiday shopping guide. If you've been very, very good, you might want to treat yourself (or a deserving fellow CoCoist) to some of the goodies — ranging from \$7.95 to \$699.95 — featured here.

(See Page 118 for ordering information.)

## CoCo 1 and 2

- [1] Have a blast from the past with *Speed Racer*. Racer X, eat your heart out! From MichTron, on cassette and disk, \$34.95. (Also works on the CoCo 3.)
- [2] Can King William never rest? Join him in a trilogy of Adventures from RTB Software for the CoCo 1 and 2 only — *Labyrinth* (\$24.95), *Quest for the Ring* (\$34.95) and *Adventure in Lumeria* (\$36.95). Here he is at the beach, attempting to cross the sea to save his lady fair.
- [3] Go lunar and drive for yourself an out-of-this-world set of wheels with *Moon Runner*. It's arcade action in orbit. (Pssst!, also included is a version especially for the CoCo 3.) From Nick Bradbury, disk system only, \$15.
- [4] Deliver the ultimate parting shot with *Car Sign Designer*. The package comes with two reusable sign holders. From Zebra Systems for 64K CoCo 1, 2 and 3 disk systems, \$29.95.
- [5] Are you fumble-fingered? Is your wimpy wpm getting you down? Here's the cure — *TypeMate*, a typing tutor on a ROM pack from Tandy (also works on the CoCo 3). Available in Radio Shack stores nationwide for \$24.95.
- [6] Get a handle on CoCo 1, 2 and 3 data storage with Burke & Burke's *Hyper-I/O* (\$29.95), a program that allows the use of 3½-inch floppy drives and hard drives under Disk BASIC and OS-9.

## CoCo 3

- [7] Trigger happy? Our Business Assistant, Dawn Cecil, is. Here she is taking potshots at the screen with the Iron Forest phaser. If you feel you're up to zapping a few monsters in the mission to protect a sacred white dove, this game is for you. (The graphics and sound effects are great!) From Diecom Products for disk systems only: \$29.95 U.S., \$37.95 CDN; with phaser and interface, \$74.95 U.S., \$93.95 CDN.
- [8] Thexder is the Number 1 arcade hit from the Land of Sushi and the Rising Sun. If you're into Transformers, you should like this game. From Sierra On-Line, available in Radio Shack stores everywhere, \$24.95.
- [9] Integrate text and graphics and dabble in new dimensions of desktop publishing with Max-10. It's menu-driven and requires a disk drive and a Hi-Res joystick or mouse. From Colorware, \$79.95 plus \$3 S/H.
- [10] Feel like questing? Then go seek ye the Phoenix Crossbow in Sundog Systems' *In Quest of the Star Lord* (\$34.95 plus \$2.50 S/H). Requires disk drive.
- [11] Based on the ancient game of mah-jongg, Shanghai is a brain-teaser for those who don't give up easily. It's on a ROM pack from Activision for \$34.95: Available in Radio Shack stores nationwide.
- [12] Ever get the feeling you're lost in a maze and being chased by ugly monsters? Perhaps you've been playing *A Mazing World of Malcolm Mortar* in your sleep. On a ROM pack from Tandy for \$29.95: Available in Radio Shack stores nationwide.
- [13] Dive Into a mouse- and menu-driven programming environment for Enhanced Color Disk BASIC with Window Master. It requires 512K and adds more than 50 commands and functions to CoCo 3's BASIC. From Cer-Comp, \$69.95 plus \$3 S/H.
- [14] If you're in the market for 80-column, menu-driven CoCo 3 word processors, you might check out Word Power 3.2, which features a print spooler, spelling checker and split-screen editing. From Microcom Software, \$79.95.

15

16

17

18

19

## Hardware

- [15] You might want to hold off on that new floppy drive you're planning to buy — Arizona Small Computer Peripherals is selling full-height hard drive kits that come with drive, SASI controller, power supply and cables. You supply the case and interface. Available in 5-Meg (\$120), 8-Meg (\$140) and 10-Meg (\$160) models. As a bonus, some public domain software is included. The drive shown here is in a case and has a controller attached.
- [16] Here's a trio of goodies for any serious computer buff. CRC/Disto's Super Controller II (\$130) offers souped-up I/O and extra care for OS-9 operations. The EPROM programmer (\$54.95) can attach to the Super Controller and "burn in" favorite utilities. The RS-232 SuperPack (\$49.95 — requires Multi-Pak) offers CoCoIsfs an RS-232 serial port.
- [17] If it's a self-centering joystick you want, here it is, the ComMander Deluxe Joystick — with its four firebuttons for lefties and righties both. The joystick was designed for other computer systems but has been modified by CRC/Disto for the CoCo's joystick ports. From CRC/Disto, \$29.95.
- [18] You ought to be in pictures. And if you have a CoCo 3, a video camera, disk drive and a Multi-Pak — you can be. The DS-69B Digisector pack shown here with our Customer Service Manager, Beverly Bearden, is sold by The Micro Works and costs \$149.95.
- [19] Oh say, how cheaply can you see with this 12-inch, 80-column-capable green-screen monochrome monitor? Only \$67.50 plus \$7 S/H. Sold by Howard Medical Computers.
- [20] If you have data that's too important to lose, spring for Solid Drive, a static RAM disk that write-protects itself on power loss. It includes OS-9 and Disk BASIC device drivers and requires a Multi-Pak. From Vidicom Corp., available in 512K (\$395) or 1-Meg (\$695) version.
- [21] How about it, CoCo 1 and 2 users? Here's the ultimate upgrade — Tandy's 128K Color Computer 3 (\$129.95) and a CM-8 RGB monitor (\$299.95) to take advantage of its native 64 colors and 80 columns, and an FD 502 single disk drive (\$199.95). See what memory and Hi-Res graphics can do.

27

## Accessories

- [22] Here's an assortment of accessories to make the computing life a little easier. The DM-8 printer stand from Datum Manufacturing (\$14.95) allows anxiety-free printer relations; tractor-feed paper can be stored snag-free underneath. The Curtis Copy Clip (\$6.95), a reversible copy holder from Curtis/PCA, keeps your eyes monitor-level; it attaches to the monitor with velcro and folds back out of the way when not in use.
- [23] Don't let one bump in the night cost you \$\$\$\$ — get an MPI-CoCo Locking Plate from Gimmesoft (\$7.95) and keep your CoCo 3/Multi-Pak connections solid. Comes in two styles.
- [24] The ultimate off-line utility — *DELPHI: The Official Guide* — will get you acquainted with every aspect of the Delphi online information service in its 488 pages. From Simon & Schuster, \$21.95.
- [25] The MS-500 monitor stand from Datum Manufacturing (\$17.95) saves desktop space and adds a touch of class to your CoCo setup.
- [26] Set your own style with Foto-Wear's iron-on transfer paper. Print a graphic using a color printer — or color a black-and-white printout with crayons — and iron it onto a cotton garment. This T-shirt shows the possibilities. Four-transfer pack, \$9.95; 10-transfer pack, \$19.95.
- [27] A gift subscription to THE RAINBOW and RAINBOW ON TAPE or DISK is a gift that keeps giving the whole year round. RAINBOW's OS-9 books, the binders, the Adventure books and other entries in the RAINBOW Library make nice gifts, also. See pages 10, 12, 24, 50, 51 and 112 for more information on ordering these items.

*Wall Street comes to your CoCo screen with this game of luck and skill in buying and selling stocks*

# Playing the Stock Market

By Mark Webb

**S**tock Ticker is a Simulation game of buying and selling stocks, collecting dividends and becoming wealthy. There are two versions of the program. Listing 1, STOCKS3, will work on any CoCo 3 with 128K, an RGB monitor and one joystick. Listing 2, STOCKS2, will run on the CoCos 1 and 2 and requires at least 16K ECB of memory.

STOCKS3, the CoCo 3 version, is menu-driven and uses the right joystick to execute commands. STOCKS2, the CoCo 1 and 2 version, uses the following keys for game play:

H	Help Screen
C	Original buy for playing against the CoCo (HAL)
A	Autoroll
S	Sell stocks
Q	Quit Autoroll
B	Buy stocks
Space bar	Roll (single)

Also, in the CoCo 1 and 2 version: Pressing the up-arrow key allows the next player to buy stocks without rolling and affecting the stock values. This allows each player to buy stocks at the

same price and can only be used at the beginning of the game. If you are playing against the CoCo (called "HAL" and only available in the CoCo 1 and 2 version), press C when it is CoCo's turn to do the initial buying.

The available stocks are as follows:

GO = Gold
SI = Silver
OI = Oil
BO = Bonds
IN = Industrial
GR = Grain

CoCo 3 version only:
FO = Forestry
SP = Space

Both versions of *Stock Ticker* are designed for up to four players. The object of the game is to buy and sell stocks so that you accumulate more wealth by the end of the game than any other player. Each player begins the Simulation with \$10,000 and may purchase stock at the start of the game at par value (e.g., \$2,000 will buy 2,000 shares of any stock at the start of the game.) It is not necessary to spend all of your money at once, though after the first player rolls, the prices may change. However, you can buy and sell any time it is your turn. An Autobuy feature is included which can be used to buy stocks for you automatically when you

have enough money. By using Autobuy, you can select any of the stocks you want it to buy for you. You can even select *all* the stocks, sit back and watch your money roll in! Stocks can be "turned on" or "off" as many times as you want when it is your turn. The Roll option will roll just once for you and then stop. Autoroll will keep rolling until the joystick button is pressed on the CoCo 3 version or Q is pressed on the CoCo 1 and 2.

The computer sounds a notice when a stock has declared a dividend and is at or above par-value of 100. At this point players are paid a dividend amount depending upon how many shares of that stock they own. If a stock rises above 200, all players holding shares in it are granted a two-for-one split, and the stock is restored to a par of 100. If a stock crashes, or falls below zero, then players unfortunate enough to be holding that stock lose all their shares of it.

The game ends when the number of rounds winds down to zero. When that occurs, the computer calculates each player's gross worth at game's end and displays it on the screen. A 500-round game can be played in 45 minutes to an hour.

(Questions or comments concerning these programs may be addressed to the author at P.O. Box 793, Gold River, B.C., Canada V0P 1G0. Please enclose an SASE when requesting a reply.) □

*Mark Webb is a computerist by both vocation and avocation. He runs the chemical-plant computer at a Canadian pulp mill and, after hours, programs his CoCo 1 and 3.*

### The Complete Rainbow Guide to OS-9

Authors Dale Puckett and Peter Dibble show how to take advantage of OS-9's multitasking and multiuser features. An easy-to-read, step-by-step guide packed with hints, tips, tutorials and tree software in the form of program listings.  
Book \$12.95, Disk Package \$19.95 (2 disks, book not included) — a savings of up to 36%!

**SAVE 38%!** Book and disks only \$29.95

### The Rainbow Introductory Guide to Statistics

Dr. Michael Plog and Dr. Norman Stenzel give a solid introduction to the realm of statistical processes and thinking for both the beginner and the professional. (80-column printer required.)  
Book \$2.95, Tape or Disk \$2.95 — a savings of 54%!

**SAVE 62%!** Book and tape or disk only \$4.95

# Save up to 70% on our special discount

## A Holiday Gift Idea Welcome on Any

### The First Rainbow Book of Adventures

Contains 14 winning programs from our first Adventure contest. Includes *Sir Randolph of the Moors*, *Horror House*, *One Room*, *Dr. Avalanche* and more. Plus hints, tips on solving Adventures.  
Book \$2.00, Tape \$2.00 — a 43% savings!

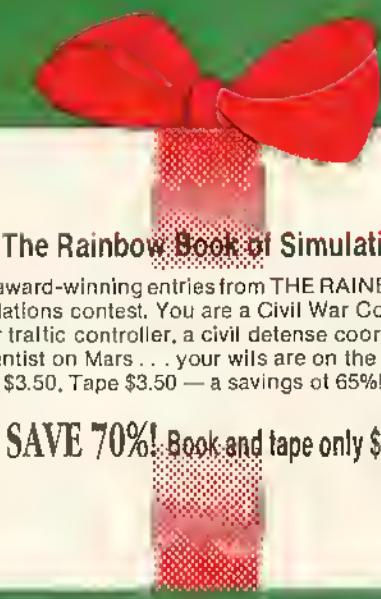

**SAVE 50%!** Book and tape only \$3.50

### The Second Rainbow Book of Adventures

Featuring 24 of the most challenging Adventure games ever compiled. Meet the Beatles and battle the Blue Meanies, find a hidden fortune, or win the heart of a mysterious princess. *Ring Quest*, *Secret Agent Man*, *Dark Castle*, *Curse of Karos* and more!  
Book \$6.95, Tape \$6.95 — a 50% savings!

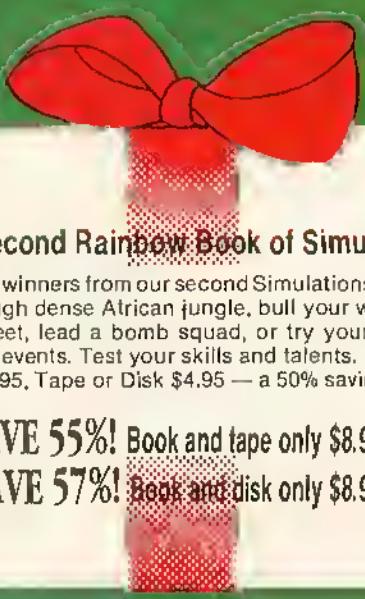

**SAVE 57%!** Book and tape only \$11.95

### The Rainbow Book of Simulations

20 award-winning entries from THE RAINBOW's first Simulations contest. You are a Civil War Commander, an air traffic controller, a civil defense coordinator, or a scientist on Mars . . . your wits are on the line. Book \$3.50, Tape \$3.50 — a savings of 65%!

**SAVE 70%!** Book and tape only \$6

### The Second Rainbow Book of Simulations

The 16 winners from our second Simulations contest. Fly through dense African jungle, bull your way down Wall Street, lead a bomb squad, or try your hand at Olympic events. Test your skills and talents. Book \$4.95, Tape or Disk \$4.95 — a 50% savings!

**SAVE 55%!** Book and tape only \$8.95

**SAVE 57%!** Book and disk only \$8.95

*Brand New!*

### The Fourth Rainbow Book of Adventures

See Page 24 for  
order information

# packages!

## Rainbow Bookshelf!

### The Third Rainbow Book of Adventures

The excitement continues with 19 new Adventures. Discover backstage intrigue at the London Theatre, attempt a daring space rescue, or defeat evil in the year 2091 as a genetic android. *Evil Crypt, Spymaster, Time Machine, The Amulet*, and that's only the beginning! Book \$6.95, Tape \$6.95, Two-Disk Set \$7.95 — a savings of up to 47%!

**SAVE 45%!** Book and tape only \$11.95

**SAVE 52%!** Book and disk only \$12.95

Use this program to keep track of election results  
and make your own predictions

# Election '88

By Leonard Hyre

**T**uesday, November 8, 1988 — Election Day — is here. After hearing presidential debates, reading the newspaper and listening to your heart, you made your decision. You voted for your favorite presidential candidate.

Now you wait. You made your choice, but did the rest of America agree with you? Most of us will sit through the evening, listening to the election results. Many will let their children stay up a little late because this night (like all election nights) is an important part of our country's heritage. We may tell our children about the voting process, or we may explain our presidential choice.

Election night is both solemn and exciting, but it is also a waiting game. We watch or listen as the results are posted. We listen as the newscasters make predictions or try, once again, to explain the electoral college. We wait. Many of you would like to do some-

thing on election night, and your children may have difficulty following the television-posted results. But what can you do?

THE RAINBOW is proud to present Leonard Hyre's *Election '88*. This program lets you plot the progress of the election results *as they come in*. You don't have to wait for your favorite newscasters to give the results, explain their significance and make their predictions. With this program, you can enter the information, see the results and make your own predictions.

The presidential election is a vital part of our political system. Whether or not our candidate wins, we know that our votes count in the decision-making process. THE RAINBOW and Leonard Hyre are happy to give you and your family a program that will make this election's coverage a little more fun and interesting. Enjoy election night, and enjoy *Election '88*!

**S**oon we will elect a man to lead our nation for the next four years — the president of the United States. Like most Americans, my political sense is heightened during the time preceding our presidential election. I am, as we all are, involved in an important decision.

In July, I presented *Convention* as an aid in understanding and enjoying each party's nomination process. *Election '88* is a companion to the previous program. *Election '88* will help you and your family enjoy and understand the election process by letting you tabulate election results, review election history and predict the election's outcome.

## *"Gather the family around on or before Election Eve and let them guess which candidate will carry each state."*

Let's begin with a brief explanation of our electoral system. Our president and vice president are not elected by popular vote. Instead, they are elected by electoral vote. When we vote for a president, we are actually voting for a particular party's right to send its *electors* to the electoral college. Each state and the District of Columbia sends as many electors as it has senators and representatives. There are 538 electoral votes available. To win the presidency or the vice presidency, a candidate needs at least 270 votes. If neither candidate receives enough electoral votes, the Senate and the House of Representatives will elect the president.

*Leonard Hyre is the author of Federal Hill Software's Handicapper series and a number of articles for RAINBOW. He also published several articles in RAINBOW's sister publication, PCM, and is the author of Sanyopoly, a new Sanyo game from Michigan Software.*

*Election '88*'s main objective is to keep track of the electoral votes as election-day results become available. Entering the votes by state is the first option on the program menu. If you choose to enter state votes, Option 1, you are asked for the two-letter postal abbreviation of the appropriate state. The program then presents that state's number of electoral votes. The program then asks you to identify who has received the electoral votes by pressing the initial letter of the following choices: Democrat, Republican or Undecided. After you have entered this information, the program will ask you for the next state. When you have entered all current information, type XX to exit Option 1. Your responses are then added to previous information and the results are tabulated.

Option 2 presents an onscreen current status report, which shows the total votes accrued by both parties and indicates how each state has voted. Option 3 gives you the same information on a one-page printout. These options will help you keep track of the electoral votes and predict the outcome of the election — just like the pros.

Option 4 adds a touch of magic to the program. A map of the United States is created. As you identify the winning party in each state, the state is painted the appropriate color. Use this option to illustrate the evening's progress, or use the map to reinforce your children's (or your) knowledge of United States geography. There might even be a lesson or two about party distribution or a candidate's campaign practices in this map. You decide.

Option 5 is a History Submenu, which (as the heading suggests) sends the program to a submenu that presents four options:

1. Democratic Tickets (1920 —)
2. Republican Tickets (1920 —)
3. U.S. Presidents (1920 to 1984)
4. Electoral College Facts

Selecting any one of these options sends you (or your child) to an information screen, which elaborates on the chosen subject. (This way, we won't just tally the electoral votes, we'll know how they work.)

Menu Option 6 allows the user to save the data entries in progress and load them again at a later time. This will be most useful when using the last menu option to play "Political Predictions." Political Predictions is an option that lets you make a game out of the selec-

tion process. For this, gather the family around on or before Election Eve and let them guess which candidate will carry each state. After the final tabulations are in, *Election '88* will determine just how well the predictions match those of the electorate at large.

*Election '88*'s program structure is straightforward and simple. You should have little trouble following the program logic. The first few lines dimension the necessary data space and display the title screen. Next, program data is listed and read into memory. Be careful typing these data statements. They must be accurate. Next, the main menu information is listed. (See REM statements in the program.) The routines for each function follow. The routine that deals with state results (Option 1) provides the information needed for the other options.

For the map routine, I used DATA statements to provide the LINE statements with needed information. (This shortened the length of the code needed and the typing required to enter it.) After the program creates the map for the first time, it gets the entire U.S. map as a graphic array. Therefore, when the program recalls the map, it puts the map on screen and skips the data section of the program. This solves all the programming problems and presents the map almost instantly. Users do not have to wait for the DRAW statement to perform its laborious task each time the map is called.

Typing in and running *Election '88* should present no serious problems if you enter the correct data, including all commas. If you have any problems with the program, look at the appropriate DATA statements.

Enjoy *Election '88*. Let's hope "our" candidate wins!

*Questions or comments concerning this program may be directed to the author at P.O. Box 403, Cambridge MD 21613. Please include an SASE when requesting a reply.* □

# SUNDOG SYSTEMS

## Warrior King

**NEW!**

Become RASTANN, Warrior King, on the quest to regain his rightful crown, hidden deep within a sinister land. Battle monsters, gain magic and weapons, and travel through harsh wilderness and dark castle dungeons in this medieval realm. From the creator of *Kung-Fu Dude* comes this awesome arcade game for the CoCo III! *Warrior King* uses the most detailed 320x200 16 color graphics and high speed machine code to vault you into a world of fantasy. Dare ye challenge the many perils ahead in order to become WARRIOR KING? Req. 128K CoCo III, disk drive, and joystick. Only \$29.95.

## In Quest of the Star★Lord

This is THE graphic adventure for the CoCo III! Unparalleled 320x200 animated graphics will leave you gasping for more! You quest for the Phoenix Crossbow in this post-holocaust world of science and fantasy. *In Quest of the Star Lord* is a full 4 disk sides of mind-numbing adventure! Req. 128K CoCo III and disk drive. Only \$34.95. Hint Sheet: \$3.95.

"A dynamite program! The best graphics I've seen to date on the CoCo III. You have to see it to believe it."

— 8/88 Rainbow review

## Kung-Fu Dude

An exciting arcade game. The BEST karate game ever created for the CoCo! Destroy opponents and evade obstacles as you grow ever closer to your ultimate objective. Spectacular graphics, sound effects, and animation! Req. 64K CoCo, disk drive, and joystick. Only \$24.95.

"The CoCo karate gap has been filled and Kung-Fu Dude does it excellently. I highly recommend it!"

— 2/88 Rainbow review

**Sundog Systems**  
21 Edinburg Drive  
Pittsburgh, PA 15235  
(412) 372-5674

All programs CoCo 1, 2, 3 compatible, unless otherwise stated

## HALL of the KING TRILOGY

The epic adventure is back! The largest adventure campaign ever seen for the CoCo is again available! A total of six disks of intense graphic adventure will have you playing for weeks! Each section is a two-disk stand alone adventure, but all three together form an epic saga. Quest for the legendary Earthstone in the ancient dwelling of the dwarves while you enjoy the classic graphics that made this trilogy famous! Each adventure can be purchased separately for \$29.95, the lowest price ever, or you can purchase the entire set for only \$74.95! Req. 64K CoCo and disk drive.

"One of the best adventures I have experienced to date!" — 6/86 Rainbow review

"The animated graphics are dramatic, detailed, and excellent!" — 11/87 Rainbow review

"The adventure of a lifetime. Don't miss out!" — 7/88 Gamer's Connection review

## CHAMPION

Become a superhero in this unique 64K action adventure. Great graphics and sound effects! See 5/87 Rainbow review. Disk \$19.95.

## DRAGON BLADE

Another great 64K animated adventure! Can you obtain the enchanted sword to slay the evil dragon? See 11/86 Rainbow review. Disk \$19.95.

## WHITE FIRE OF ETERNITY

Enter the era of monsters and magic in this splendid 64K animated adventure! See 12/86 Rainbow review. Disk \$19.95.

Personal checks, money orders, and American C.O.D. orders accepted. Include \$2.50 for S/H. \$3.00 extra for C.O.D. orders. PA residents add 6% sales tax. Authorship and dealer inquiries welcome.

You can make all your  
Holiday Greeting Cards  
this season with the  
CoCo Graphics Designer

The Coco Graphics Designer produces beautiful Greeting Cards, Banners, and Signs for holidays, birthdays and other occasions.

The program features picture, border, and character font editors, so that you can modify or expand the already built in libraries. Plus a special "grabber" utility is included to capture areas of high resolution screens for your picture library.

**Coco Graphics Designer** ..... \$29.95

Optional Extra Font and Picture Disks:

**Font Disk A** 10 Fonts..... \$14.95  
Western, Stencil, Banner, Shadow, Variety,  
Type, Stripes, Digital, Bold3, Object.

**Font Disk B** 10 Fonts..... \$14.95  
Arcade, Circle, Alien, Cube, Baroque, Deco,  
Block, Gray, Computer, Script.

**Picture Disk #2** 4 sets of 30 pictures ea. \$14.95  
Sports, America, Party, Office.

**Picture Disk #3** 4 sets of 30 pictures ea. \$14.95  
Animals, Nature, Religion, Travel.

**Picture Disk #4** 120 Holiday Pictures: \$14.95  
Christmas, Chanukah, Thanksgiving, New  
Year's, Easter, Halloween, etc.

See our full page ad (page 53) in the October issue  
of Rainbow for sample picture and font printouts,  
or send for our free complete brochure.

Requirements: a Coco I, II or III with at least 32K, one  
disk drive, BASIC 1.0/1.1, ADOS 1.0/1.1 or JDOS.  
Printers supported include: Epson RX/FX, Gemini 10X,  
SG10, NX10, DMP 100/105/110/130/430 CGP220,  
many Okidata (check with Zebra), Seikosha GP100/250,  
Gorilla Banana, Legend 808. Ordering Instructions: All  
orders add \$3.00 Shipping & Handling. UPS COD add  
\$3.00. VISA/MC Accepted. NY residents add sales tax.

**Zebra Systems, Inc.**  
78-06 Jamaica Ave.  
Woodhaven, NY 11421  
(718) 296-2385

*Orders shipped same or next day!*

## HMC CUTS 515 to \$266

Hundreds of \$ off Monitors sighted as Major Factor. HMC is reported to have made a special purchase on Magnavox monitors. These items, listed, are being offered at remarkable savings.

**MAGNAVOX 7622** 12" Amber Screen offers 900 dots × 350 lines resolution at 20 MHz on a dark glass anti-glare CRT with built-in audio and 1 year warranty. (\$7 shipping) **\$88** 7652 green screen also available \$88

**MAGNAVOX 8 CM 515** has analog RGB for CoCo 3, TTL RGB for Tandy 1000 or IBM PC's, and composite color for CoCo 2 and 3. Built-in speaker. 14" screen with 640 dot × 240 line resolution. Plus 2 years parts and labor warranty. reg. list \$499 **was \$298 \$266** + \$14 Shipping

CC-3 Magnavox RGB cable only **\$19.95** with Magnavox Monitor order. \$29.95 w/o monitor.

7622

8CM515

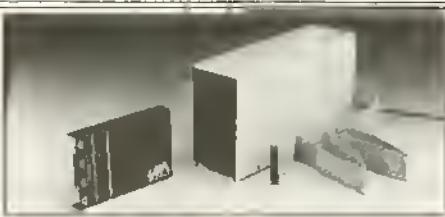

123A

**123A 12"** This 12" green screen high resolution monitor offers 80 column capability, Zenith quality and a 90-day warranty valid at any of Zenith's 1200 locations. Retail \$199. Our price **\$67.50** (\$7 shipping) **REPACK**

VA-1 for monochrome and color monitors delivers video interface for CoCo's 1 & 2 **\$29.45** (\$2 shipping)

### DRIVE Ø +. *Howards Drive Ø*

gives you a DD-3 MPI drive, a CA-1 cable and a HDS DC-5 Disk Controller for only **\$178.45**. Double sided double density 360K. (\$5 shipping) No charge for Disto DC-3 upgrade

### HMC's Guarantee— A Promise you can take to the Bank.

Howard Medical's 30-day guarantee is meant to eliminate the uncertainty of dealing with a company through the mail. Once you receive our hardware, try it out; test it for compatibility. If you're not happy with it for

any reason, return it in 30 days and we'll give you your money back (less shipping.) Shipping charges are for 48 states. APO, Canada and Puerto Rico orders are higher.

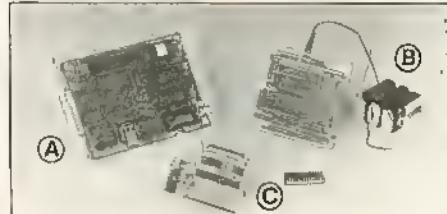

### Price Break on DISTO Disk Controllers

Includes controller and C-DOS 4.0 ROM Chip. **DISTO \$75** DC-3 [A] (\$2 shipping on all DISTO products)

### ADD-ON BOARDS

DC-3P Mini Eeprom programmer includes all software to program 2764 or 27128 chips [B] **\$55**

DC-3C Clock Calendar and parallel printer port [C] **\$40**

### RS-232

**\$49.95**  
(\$2 ship)

Replaces R.S. RS-232 board. Plugs in drive port or multi pack. 2 MHz operation works with OS-9.

### MEB

**\$30**  
(\$2 ship)

Plugs into multi pak to expand DISTO DC-3 bus. Use clock in DC-3 and eeprom programmer in MEB.

## Use our 800 number!

For credit card orders, you may want to phone in your subscription. Our credit card order number is (800) 847-0309, 8 a.m. to 5 p.m. EST. All other inquiries please call (502) 228-4492.

We accept VISA, MasterCard and American Express.

Subscriptions to THE RAINBOW are \$31 a year in the United States, Canadian rate is \$38 (U.S. funds only). Surface rate elsewhere is \$68 (U.S.). Airmail is \$103 (U.S.). All subscriptions begin with the current issue. Please allow 6 to 8 weeks for the first copy. Kentucky residents add 5% sales tax. In order to hold down non-editorial costs, we do not bill.

## Our 800 number is also good for ordering RAINBOW ON TAPE or RAINBOW ON DISK!

Just call (800) 847-0309 anytime from 8 a.m. to 5 p.m. EST. Credit card orders only. Subscriptions to RAINBOW ON TAPE are \$80 a year in the United States, \$90 (U.S. funds) in Canada and \$105 (U.S.) in all other countries.

RAINBOW ON DISK is \$99 a year in the United States, \$115 (U.S.) in Canada and \$130 (U.S.) in all other countries.

Individual issues of RAINBOW ON TAPE are \$10 in the U.S., \$12 (U.S.) in Canada and all other countries. Individual issues of RAINBOW ON DISK are \$12 in the U.S., \$14 (U.S.) in Canada, and \$16 (U.S.) in all other countries. Kentucky residents please add 5% sales tax.

RAINBOW ON TAPE and RAINBOW ON DISK are not stand-alone products: you need the magazine for loading and operating instructions and the necessary documentation. THE RAINBOW magazine is a separate purchase.

## Send Me Rainbow Magazine!

Here's your chance to have a Pot O' Gold full of programs, articles and information about CoCo every month of the year! As the premier magazine for the Tandy Color Computer, THE RAINBOW has more of everything — and greater variety, too. Do yourself and your CoCo a favor and subscribe to THE RAINBOW today!

# OWL-WARE

## Proven Technology New CoCo 3 Utilities

Great for 512K Systems! From Color Venture and OWL-WARE

### PRINTER LIGHTNING

A great print spooler which gives you 44K print buffer from a 128K CoCo and up to 438K (200 pages!) from a 512K CoCo. With this spooler you can run a program while you are printing a file. The spooler does not slow down the computer to any noticeable extent while you are running a second program and no lost characters arise. Baud rates selectable. *Printer Lightning* can reside in memory along with *RAMDISK*!

### •NEW• NEW•

SPECIAL With our 512K Upgrade (Next page) only \$2. each or 3 for \$5!

#### Announcing:

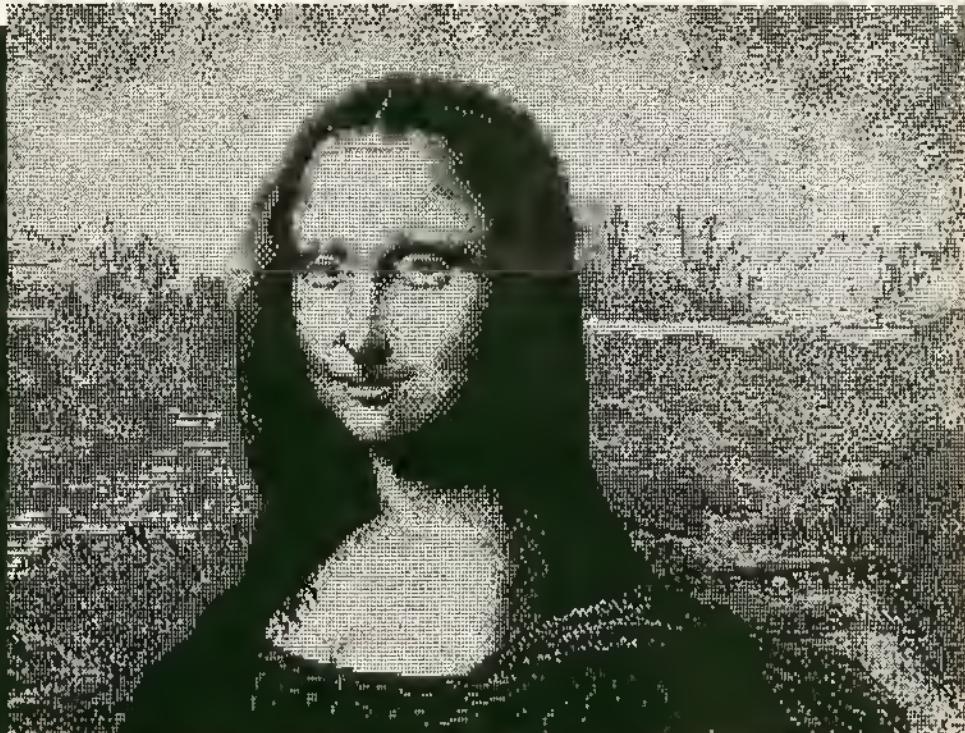

The finest graphics/drawing program for the COCO 3!

### Da Vinci 3

- 16 colors on screen at one time
- Modify each color from 64 available colors
- Use composite or RGB monitor
- Draw with custom paintbrushes
- Full resolution 320 X 192
- Picture converter for conversion of COCO 2 pictures to COCO 3
- Multiple text fonts
- Accepts input from joystick, X-pad, mouse, or touch-pad
- Boxes, circles, line, paint generation
- Screen dump for Tandy mono and color ink-jet printers, (NX-10 and others pending)
- Sensible price
- No additional hardware required because of coarse/fine joystick movement modes
- Zoom mode for individual pixel editing
- Great on screen menu which is removable at the touch of a key to allow full screen edit

128K or 512K COCO 3

\$37.95

### Super I/O Board for OS-9

Each Board Provides 2 Serial Ports and Centronics Parallel Port

First Board has Real Time Clock and Beeper... With Second Board up to 5 Users

The serial ports are usable up to 19,200 Baud, and the parallel port is a true Centronics standard. Plug into your multi-pak. On CoCo 3, multi-pak must be upgraded. You will have a multi-user system with additional computers or terminals plugged into the serial ports. An OWL hard drive and 512K upgrade are strongly recommended for multi-user systems.

**Intro Price... \$169.**

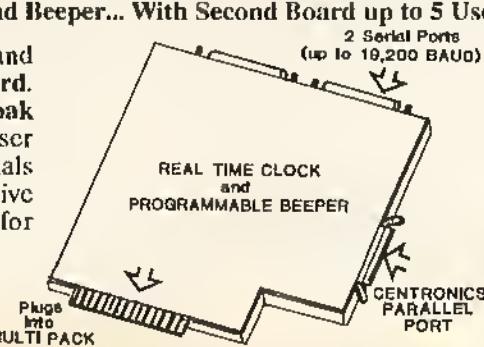

BOARD 2... \$145.

### BACKUP LIGHTNING

This program is the fastest way to make backup copies of your files using a 512K CoCo. You can backup 35, 40, or 80 track disks single or double sided. Both RS and OS-9 disks may be backed up. The original disk is saved to memory and a copy can be made on an *unformatted disk* every 45 seconds! The lightning read, write, format, and verify routines that were developed make this program much quicker than RSDOS or OS-9 for backups. This will become one of your most used programs!

Only \$19.95 each. 3 for \$39.95.

SPECIAL With our 512K Upgrade (Next page) only \$2. each or 3 for \$5!

**OWL-WARE**

# Proven

---

## On the Razor's Edge of

# Basic and OS-9 Hard Drive Systems

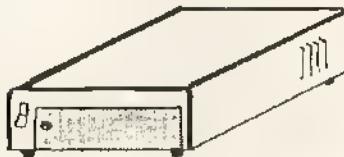

### Proven Performance for Demanding Home or Business Users

Every hard drive which has been produced by OWL-WARE during the last 3 years is **complete**. A system consists of software, hard drive, controller, heavy-duty power supply, and LR Tech Interface. There are no hidden costs for assembly or testing. When a drive system is ordered, we fully **assemble, test, and burn-in** the system for 3 full days. This ensures dependability and optimum performance.

We have now been supplying CoCo hard drive systems and parts for more than 3 years. This is the longest history in the CoCo market of any system. Some other advertisers are stating that they have one of the most reliable systems for the CoCo with *all of 4 months history in the CoCo hard drive market!* We have reached our position in the hard drive market by providing our customers with a quality product that they (and we) can be proud to own and use.

Because of many requests for a lower price system in kit form, we are now selling a kit of all parts at a significant discount compared to our regular prices. We recommend this kit (or any kits offered by any other supplier) only to those who have experience in electronic assembly and OS-9.

### For OS-9 Levels 1 and 2

**10 Meg.**

**20 Meg.**

**40 Meg.**

**\$ 999.**

**30 Meg Kit:**

**\$539.** (Lowest prices anywhere)

### OWL Hard Drive BASIC 3

There have been several ads in this magazine about BASIC for Color Computer hard drive systems. These ads sometimes only tell a part of the story. Our BASIC system price includes assembly, testing, and 3-day **burn-in** period. We do not require a Multi-pak to operate.

Our hard drive systems are fast, reliable, and reasonable in price. This has been proven by hundreds of users over the past 3 years. We do not have to turn off error checking for speed. We achieve high speed BASIC from a unique indexing method.

The table below will summarize some of the key points about our BASIC hard drive system and two other systems. We believe that we have the best BASIC interface for CoCo hard drives available.

### BASIC Hard Drive Systems \*

Feature	OWL	B&B	RGB
Drive Portion Available	Entire	Entire(?)	Entire
User Sets BASIC/OS-9 Partitions	YES	Yes	No
Add to Existing OS-9 Drive Without Reformat	YES	Yes(?)	No
Drives 0-3 Hard/Floppy	YES	No	Yes
Built In Park	YES	No	Yes
Speed	FAST	Fast	Fast

\* All feature details are believed to be true at time of writing and are subject to change. We believe that our BASIC hard drives are the fastest due to our indexing method, but all three systems are fast. On ours all BASIC commands work including DSKINI, DSKI\$, and DSKO\$.

**Prices: With/Without Hard Drive**

**\$35./\$79.**

# *Technology*

the Color Computer Frontier

# DISK DRIVES

## Floppy Drive Systems

The Highest Quality for Service Now and for Years to Come

Use our WHISPER DRIVE for the finest, quietest drive

**Drive 0 Systems (Half Height, Double Sided, Direct Drives) \$219.**

Drive 0 systems complete with drive, controller, legal DOS, cable, case, power supply, and manual

**Drive 1 Systems (Half Height, Double Sided, Direct Drives) \$129.**

**New 3.5", 720K Drives for OS-9 with case & Power Supply \$179.**

Drive 1 Systems have drive, case, power supply. (You may require optional cable and/or DOS chip to use)

Special for 0/1 Combos (Drives 0,1,2,3) **\$315.**

### HALF- HEIGHT DRIVE UPGRADES FOR RS HORIZONTAL CASES

Why only double the capacity of your system when you can triple in the same case? Kit includes: double-sided to fit your case, chip to run both sides of new drive, hardware, and detailed instructions. Easy! Takes only 5 minutes!

**Model \$119. Model \$129.**  
500                    501 or 502

All drives are new and fully assembled. We ship only FULLY TESTED and CERTIFIED at these low prices. We use Fuji, YE Data, and other fine brands. No drives are used or surplus unless otherwise stated to you when you order. We appear to be the one of the few advertisers in Rainbow who can truly make this claim. We have 5 years experience in the CoCo disk drive market! We are able to provide support when you have a problem.

**Drives 1 Year Warranty**

## OWL WARE Software Bundle

### Disk Tutorial/Utilities/Games

**DISK TUTOR Ver 1.1**

Learn how to use your disk drive from this multi-lesson, machine language program. This tutor takes you through your lessons and corrects your mistakes for a quick, painless disk drive introduction. (This professionally written tutor is easily worth the bundle's total price.)

### OWL DOS

An operating system that gives faster disk access and allows the use of double-sided drives. Corrects a floating point number error on early CoCo systems.

### COPY-IT

Quickly copies selected programs between disks. A wild card option selects groups of programs to copy.

### VERIFY

Verifies reading of each sector. Bad sectors are listed on the screen.

### 2 GAMES

We will select 2 games from our stock. These sold for more than \$20 each.

If sold separately this is more than \$125 worth of software!!

Do not mistake this software with cheap, non-professional "Public Domain" software which is being offered by others. All of this software is copyrighted and professional in quality. The tutor is unique with us and has helped thousands of new users learn their disk drive.

**only \$27.95**

**(or even better)**

**only \$6.95 with**

**any Disk Drive Purchase!!**

Our prices include a discount for cash but do not include shipping.

OWL-WARE has a liberal warranty policy. During the warranty period, all defective items will be repaired or replaced at our option at no cost to the buyer except for shipping costs. Call our tech number for return. Return of non-defective or unauthorized returns are subject to a service charge.

# NOVICES NICHE

## We're Looking for a Few Good Shorties

Help! The Niche needs more submissions! If you have written a good shortie, please send it in. We're looking for graphics, utilities, educational programs and games (especially games!). How short is a shortie? Well, if you printed out your listing in 32 columns, as we do, it should fit on one half of an 8½-by-11 inch page (be under 12 inches). (Entering PRINT#-2,CHR\$(27) CHR\$(81)CHR\$(32) will allow most Epson-compatible printers to LLIST a program in 32 columns if you want to check this.)

## Utilities

### Free Zone

By Ric Pucella

64K  
ECB

*Scroll Protect* is a utility employing a machine language subroutine to protect an area of the screen from scrolling; the area can be affected only by the PRINT@ command. *Scroll Protect* can be incorporated into another utility or a game, as long as the "parent" program works in the text screen.

When run, the program puts the CoCo in the 64K all-RAM mode (ROM instructions are copied into RAM, where they can be modified). It asks you for the top and bottom line of the "new" screen. These two values (from 0 to 15) will be the new borders of the screen, and anything above or below them lies in the protected zone, unaffected by the scroll. To restore the screen to its original size, press the reset button or run the program again.

# I/O in the Fast Lane

By Joel Hegberg

64K  
DISK

Thumbing through the June '88 issue of RAINBOW, I came across Scott Honaker's article "Exercise Your Drives" (Page 110). It showed how to really speed up the CoCo's disk drives, but it didn't show how to use that speed for everyday operations. After a careful reading of the article, I loaded EDTASM+, started nosing my way through Disk BASIC and found the places that use the disk drives. I made a machine language program and, after days of trial and error, created *FastDisk*.

The program first does a ROM-RAM conversion on the CoCo 1 and 2. Then it stores the ML program into memory and runs it. The program actually changes the drive step rate from a slow 30 milliseconds to a fast six milliseconds. It also reduces the wait period CoCo takes before reading the disk. Every time I use my CoCo 2, I run this program first.

I tested my efforts by timing how long it took to load EDTASM+ before and after *FastDisk*; it took 12 seconds before and only eight seconds after. *FastDisk* also makes the drive quieter and stops the rattling that worries so many new users.

Just type in, save and run the program. *FastDisk* requires no other programs to help it along, and it should be compatible with most of your BASIC programs. If you press the reset button, however, the system will revert to Disk BASIC. To prevent this, either make a reset patch or simply type POKE 65503,0 at the OK prompt, to be back in *FastDisk*.

**Graphics**

## Showing Off Random Graphics

By Allen Goff

CoCo 3

*Loader* and *Ellipse* are two complementary programs that let CoCo 3 users create a series of random graphics and store them for later recall. *Ellipse* allows the user some control over the final appearance of a graphic, and then saves that graphic (in binary format) to disk — it can save as many graphics as the disk will hold (about 20, as each "picture" takes up three granules of disk space).

When run, *Ellipse* prompts the user for the number of designs to save to disk and then calls on random horizontal and vertical values to draw a design of interlocking ellipses across and down the screen. Pressing the up arrow key begins the process anew, overlaying the first design with a different one. The pattern can become as complex as the user wishes. Pressing the right arrow key saves the graphic in its current stage of development. Pressing the space bar clears the screen. The program will continue generating ellipses until it has saved to disk the specified number of graphics.

When you have finished with graphics creation, load *Loader*, insert the "save" disk into the drive, and run. The program will ask you for the number of graphics to display and then proceed to display them in an automatic "slide-show." Although the pictures were drawn in PMODE 4, the program gives you the option of viewing them in PMODE 3.

## It's a Bug-Eat-Bug World

By Stephen Elms

In *Centipede* you become a big insect with a voracious appetite for little insects. As the little mites pop up on the screen you use your arrow keys to race over and gulp them up. The only problem is that each bug you eat makes you grow (Mother Centipede always told you that eating your insects would make you grow big and strong). As your body grows longer and longer, it becomes more and more difficult to negotiate the little rectangle in life you've been allotted. Beware of running into your tail or bumping into a wall, for to do so is to court peril! Remember this one commandment and you will live to eat many bugs.

## Education

### Odd One Out

By Ken Ostrer

16K  
ECB

If your children are unsure of, or just a little fuzzy on, which numbers are even and which are odd, *Even-Odd* may be of help. When you run the program, a small tutorial is presented, and then the student is drilled on the subject.

A line of numbers is displayed, and the student must press E or O depending on whether the number is even or odd. A bar at the bottom of the screen represents how much time is left for each set. If time runs out before the responses are complete, the drill will end. Speed and accuracy are of the utmost importance.

Six sets of numbers are presented per screen "page." To make things more interesting, the child must get at least 75 percent of the responses correct in order to advance to the next page. The child will probably get more out of this program if the parent and child solve the problems together.

Submissions to "Novices Niche" are welcome from everyone. We like to run a variety of short programs that can be typed in at one sitting and are useful, educational and fun. Keep in mind, although the short programs are limited in scope, many novice programmers find it enjoyable and quite educational to improve the software written by others.

Program submissions must be on tape or disk. We're sorry, but we cannot key in program listings. All programs should be supported by some editorial commentary, explaining how the program works. If your submission is accepted for publication, the payment rate will be established and agreed upon prior to publication.

The fifth in a series of tutorials for the beginner to intermediate machine language programmer

# Machine Language Made BASIC

## Part V: Get the Point

By William P. Nee

This month's programs change the color of various screen locations. Now, color information is stored in several locations in the Color Computer. Locations used in this article are as follows:

Location	Start-up
\$B2	foreground color (3)
\$B3	background color (0)
\$B4	current color (0)
\$B5	\$B4x(#\$55) (0)
\$C2	PSET = 1; PRESET = 0

As shown in Figure 1, colors depend on the PMODE and color set used.

The computer colors zero to three correspond to the BASIC colors one to four and five to eight. Three is the

or load the desired color number into Register B and JSR \$9536. (The latter will *not* change the background color in \$B3.)

Location \$C2 can be used as a toggle for PSET (if it is set to one) or to PRESET (if it is set to zero). However, the PSET routine we will use starts after the ROM routine has checked Location \$C2, so we should use either the subroutine at \$959A, which multiplies the color number by #\$55 and stores this total at Location \$B5, or PMODE 4/2/0, which will store a random 0 or -1 (RND(2)-2) in \$B5 and then PSET or PRESET the point. (Remember, -1 is the same number as #\$FF.) PMODE 3/1 will use a random (0 - 3)x(#\$55) to PSET three colors or PRESET the background color.

may have different branches if Register B was equal/not equal to one of these colors. If a point has been PRESET, the PPOINT routine will make it the background color. (Note: You always lose registers A, B, and X, so be sure to save them first.)

The PSET routine is at Address \$9374, and, as with most machine language programs, requires some additional set-up. The routine uses the following locations:

\$B9	bytes per line
\$BD/BE	horizontal coordinate — X1
\$BF/C0	vertical coordinate — Y1

The coordinate locations are two bytes so that you could, for example, either STX \$BD or STA \$BE. X1 cannot be greater than 255; Y1 cannot be greater than 191; and neither can be less than zero.

A scaling routine at \$931D is also required. Since we will pick up the PSET routine after ROM has scaled the coordinates, we must add this to our program prior to the PSET. Scaling adjusts X1 and Y1 to compensate for the different bytes per line (in \$B9) assigned to the individual PMODES. Without this scaling routine, most graphic commands (PSET, LINE, CIRCLE, etc.) would be accurate only in PMODE 4. (The PPOINT routine we've already discussed includes the scaling subroutine.)

Figure 1:

	Number	Set 0	Set 1	\$B5
PMODE 3/1	0	green	buff	#\$00
	1	yellow	cyan	#\$55
	2	blue	magenta	#\$AA
	3	red	orange	#\$FF
PMODE 4/2/0	0	black	black	#\$00
	3	green	buff	#\$FF

highest number used for color because  $4x(\#\$55)$  would be greater than 255 and would not fit into Location \$B5. With machine language, we can control and change the contents of the color locations throughout the program.

At start-up, the computer will store 0 in \$B3 (for the background color) and 3 in \$B2 (for the foreground color). Using the PCLS routine at \$9542 will clear the screen to the background color. If you want a different background color, either load the desired color number into \$B3 and JSR 9542,

You may also use the PPOINT routine at \$933C to check the color of a bit at any horizontal location (by storing that bit in Location \$BE) and any vertical location (by storing it in \$C0). The result of the PPOINT routine is stored in FP1. JSR \$B3ED will return the color number to Register B. In PMODE 3/1 the result will be colors one to four (if you are using color set to 0), or colors five to eight (if you are using color set to 1). In PMODE 4/2/0, the result will be zero or one with color set to 0, and zero or five with color set to 1. Your program

Bill Nee bucked the "snowbird" trend by retiring to Wisconsin from a banking career in Florida. He spends the long, cold winters writing programs for his CoCo.

**Listing 1:** POINTSAS

```

10 PMODE 4,1:PCLS:SCREEN 1,1
20 FOR N=0 TO 32
30 FOR NN=31 TO N STEP -1
40 B=RND(2)
50 FOR H=0 TO 192 STEP 64
60 FOR V=0 TO 128 STEP 64
70 ON B GOSUB 100,150
80 NEXT V,H,NN,N
90 GOTO 20
100 PSET(H+NN,V+NN-N):PSET(H+NN-
N,V+NN)
110 PSET(H+62-NN,V+NN-N):PSET(H+
62-NN+N,V+NN)

```

The PSET routine in ROM uses registers A and B, so be sure to save any information in them first. Before running the program, set Location \$FF/100 to #\$2000. Since the program starts with PMODE, type "GPMODE" or "G3000" to execute it. Pressing any key will break the program, but you must hold the key down for several seconds because the program does a lot before getting to the *break* location. In the 'A' mode you can read the program and symbols from \$2200 to \$2B65.

Run the BASIC program first to get a feel for the design and program speed.

(or lack of it). Next, run the machine language program. (Note: The machine language program does *not* run on the CoCo 3.) If you run the machine language program from BASIC, clear enough memory with the command, CLEAR 200-. &H3000-1. Even though

the machine language program is eight times longer, it runs much more quickly.

(Questions or comments concerning this tutorial may be addressed to the author at Route 2, Box 216C, Mason, WI 54856-9302. Please enclose an SASE when requesting a reply.) □

*There is nothing wrong with your Color Computer.  
Do not attempt to adjust it.*

Burke & Burke's new A.S.B. program gives you a complete, OS9-compatible version of Disk Extended Color BASIC. We've added new software for OS9-style graphics, sound, printer, and disk I/O. The BASIC you know and love is now running under Level 2 OS9 windowed

R.S.B. loads and saves files using OS9's file format, so we've also included utilities to transfer BASIC programs and data files between OS9 and BASIC disks. Of course, you can't use R.S.B. to run machine language programs, and some BASIC commands work slightly differently under R.S.B.

Your BASIC programs can take full advantage of great OS9 features like hard disks, no-hell floppies, multi-tasking, and 2 MHz operation.

R.S.B. requirea a CoCo 3 with el leval 128K RAM, a Floppy controller with either Tandy Disk Extended Color BASIC o DISTO CoCo 3 CDOS ROM, and Level 2 OS9.

R.S.B. \$39.95

ILLINOIS RESIDENTS PLEASE ADD 7% SALES TAX. COD's add \$2.20. Shipping (within the USA) \$1.50. Please allow 2 weeks for delivery. Overnight delivery available for in-stock items. We accept MasterCard and VISA. Telephone orders accepted (312) 397-2898.

# Submitting Material To Rainbow

Contributions to THE RAINBOW are welcome from everyone. We like to run a variety of programs that are useful/helpful/fun for other CoCo owners.

**WHAT TO WRITE:** We are interested in what you may wish to tell our readers. We accept for consideration anything that is well-written and has a practical application for the Tandy Color Computer. If it interests you, it will probably interest lots of others. However, we vastly prefer articles with accompanying programs which can be entered and run. The more unique the idea, the more the appeal. We have a continuing need for short articles with short listings. These are especially appealing to our many beginners.

**FORMAT:** Program submissions must be on tape or disk, and it is best to make several saves, at least one of them in ASCII format. We're sorry, but we do not have time to key in programs and debug our typing errors. All programs should be supported by some editorial commentary explaining how the program works. We also prefer that editorial copy be included on the tape or disk using any of the word processors currently available for the Color Computer. Also, please include a double-spaced printout of your editorial material and program listing. Do not send text in all capital letters; use upper- and lowercase.

**COMPENSATION:** We do pay for submissions, based on a number of criteria. Those wishing remuneration should so state when making submissions.

For the benefit of those who wish more detailed information on making submissions, please send a self-addressed, stamped envelope (SASE) to: Submission Guidelines, THE RAINBOW, The Fallsoft Building, P.O. Box 385, Prospect, KY 40059. We will send you comprehensive guidelines.

Please do not submit material currently submitted to another publication.

Hint . . .

### Cursor Controls

Memory location 63372 controls the blink rate of the cursor on the CoCo 3's 40- and 80-column text screens. Simply poke this location with any value from 0 to 255 to change the rate. The default value is 11. Lower values increase the blink rate while larger values make the cursor blink slower. If you want to stop the Hi-Res cursor from blinking altogether, enter POKE 63381,0. To restart the blinking, enter POKE 63381,1.

Ken Ostrer  
Vancouver, Washington

Hint . . .

### HPRINT Shortened

When entering BASIC programs, I like to use the shorthand version of the PRINT command (typing a question mark instead of typing out PRINT). Unfortunately, if you try entering H? on the CoCo 3 (instead of HPRINT), you will get a syntax error upon running the program. To solve this problem, enter the entire listing using H?. Then save the listing in ASCII format and reload it. All H? commands will be changed to HPRINT.

Carl England  
Calhoun, Georgia

Hint . . .

### BASICally a Setup

In order to make using my CoCo a little easier, I saved a program on my utilities disk that sets the printer band rate, drive selection and other parameters. To make things even simpler, I named the program \*.BAS. Now when I want to start working, I just enter RUN/\* and let the computer set itself up, much in the way an AUTOEXEC file works on MS-DOS systems.

Harold Grumann  
Atlanta, Georgia

**U**sing the motion option of the CoCo's DRAW command, we have created some simple line drawings. Let us now soften the traditionally sharp edges of CoCo graphics by adding gentle curves to our creation.

For this demonstration, we will make a simple footprint — specifically the print of a man's right shoe. We will start with a rough sketch on graph paper. After we get a shape that pleases us, we will use our modified *Graph Paper* program to put the sketch on the CoCo screen.

Begin by choosing the dimensions of the shoe print. (For this demonstration, I chose 8-by-20 units.) Next, take a sheet of graph paper and outline an oblong that is eight boxes wide and 20 boxes long. Use a mark at the top of the oblong to divide the figure into two equal parts. Mark the oblong at two-block intervals along the left vertical line. For our purposes, the upper left-hand corner of this figure will be our point of origin (0,0). The tip of the shoe should be two units wide and centered.

As you sketch, you are also plotting your program line. First, move three units to the right and then make a two-unit pencil mark to the right (BR3R2). Move in a 135-degree angle for one unit (F). Our sketch widens gradually and should touch the right border of our oblong at the coordinates (8,9). If you draw a line to continue in this direction, you would have a sharp angle two units to the right and three units down, which translates to M+2,B or M+2,+B.

Next, make your sketch curve toward the center by using a line that moves six units down and two units to the left (M-2,B). Now we need to add a heel to this figure. To be in proportion with the rest of the shoe, the heel should be four units long. Because we have five units to fill, start by moving down one unit. Now we will create the front of the heel. In order to be centered, the heel's line should be four units long (NL4). Next, move down three units (D3), and round the butt of the heel by moving one unit at a 225-degree angle (G) and two units to the left.

(Are you sketching as we go? You should have one half of a shoe on your graph paper.)

*Smooth out those rough spots with a little help from CoCo*

# What's the Angle?

By Joseph Kolar  
Rainbow Contributing Editor

To make the other side of the heel, move one unit at a 315-degree angle and four units up (HU4). We must now show an indentation for the instep. To do this, move in an angle that is four units up and one unit to the right (M+1,-4). Now widen the shoe until it touches the left boundary of your oblong by drawing a line that is four units up and three units to the left (M-3,-4).

As we return to the tip of the shoe, we must draw a line that moves in a 45-degree angle (E) and reaches the top boundary of our oblong at the coordinates (2,1). This will leave a gap that we can connect with a line six units up and two units to the right (M+2,-6).

This outline *should* look like a right shoe. Go over the outline in red ink, moving from point to point. Now, let's see what this looks like on the CoCo screen.

Load our *Graph Paper* program (September 1988, Page 80), and add the following line:

300 GOTO 300

We will need all 19 rows created on the screen and will need to modify the utility in the following manner:

Line 30: change 160 to 190 in both D\$ and B\$ strings.

Line 50: concatenate +A\$+B\$+A\$.

Line 60: change 160 to 190 at all four occurrences.

Line 70: change C4 to C2, and change 160 to 190 in both occurrences.

Never hesitate to tailor an existing program to fit a new situation. In this tutorial, we need three more rows, and we want to change the border color to make our outline stand out. In a later, tutorial, we will create a full 256-by-192 screen.

You may want to make the following changes to our graph-paper utility: Add the contents of Line 90 to the end of Line 80, and separate with a colon. Put Line 90 in limbo with a REM. Now run the utility. If the program runs properly, delete Line 90.

(While we're modifying our utility, let me offer the solution to the last column's problem: Change all the 1s to 2s in lines 150 to 157.)

Back to the drawing board. We have a problem. We can only create 19 boxes in a vertical direction, but our shoe is 20 boxes long. How can we create our drawing on the screen? We could shorten the shoe length one unit. Where can we remove one unit on each side of the shoe? I suggest that we begin at Location (6,15) and remove one unit down. Run a zigzag pencil line over the red line one unit above the heel. On the other side of the shoe, make a zigzag line over its mate. These zigzag lines indicate that you must omit the marked segments when you are creating the program line. Now the shoe is 8-by-19 units.

Enter Line 95, which will remove all the unnecessary portions of the graph paper from the screen. This way, you can concentrate on converting your sketch into a shoe on the screen.

Using our shoe print we will begin creating the outline on the CoCo screen by typing the following line:

100 DRAW "C3540BM0,0BR3R2F"

Then press ENTER and type RUN.

Next, press BREAK and type EDIT100. Press ENTER and X to move to the end of the line. Use the left arrow to move one space and remove the closing quote marks in Line 100. Type in M+2,BM-2,B", press ENTER and run. If your screen does not duplicate your sketch, look for an error in either the direction or the number of units. Now press BREAK.

Look at the sketch. We have reached the unit that we plan to omit. Edit Line 100, removing the closing quote as we did before. Now we need to move four units to the left and return to the move's

*Florida-based Joseph Kolar is a veteran writer and programmer who specializes in introducing beginners to the powers of the Color Computer.*

starting point (NL4). Next, we need to finish the heel D3GL2HU3). To do this, add the following to Line 100:

NL4D3GL2HU3"

Now press ENTER and run the program.

Complete the shoe by editing Line 100, removing the closing quotes and concluding the DRAW statement. Make sure that your statement omits the unit corresponding to the one we removed in our drawing. When you have finished, type RUN.

If your footprint is faulty, don't panic. Just refer to your sketch and correct your program line accordingly.

Look over your creation. Would you like to see it in a usable size (like Size 8)? If so, just type in the following lines:

```
98 GOTO 400  
400 PMODE4,1:PCLS:SCREEN1,0  
410 GOTO 100
```

Edit Line 100 to change S40 to S8. To do this, type EDIT100, and press ENTER. Use the space bar to move under the 4, press D (to delete 4) and C8 (to change the 0 to an 8). Now press ENTER to get out of the editing mode, and run the program.

Both sides of the sole come to a sharp point. We want gentler curves than this. Let's make a few modifications to our sketch. (After all, have you ever seen a drawing or a program you couldn't improve?)

First, let's return our shoe print to the graph-paper screen by masking Line 98 with REM and editing Line 100 by typing EDIT100 and pressing ENTER, moving the cursor under 8 and typing C410 to change 8 to 4 and insert 0. Now press ENTER and run the program.

(You may wish to study the points

that are earmarked for modification.)

Begin at (6,0) and sketch a line that moves down six units and right two units, then moves down two more units. This changes M+2,8 to M+2,6D2. With a black pen, mark over the newly created pencil line.

D2 to the line. Now press ENTER and run the program.

You must go slowly when editing long DRAW statements because it is so easy to make a mistake. Therefore, we will make one set of changes, run the program to see if the outline is changing in the desired manner, and then move to the next change.

The next modification begins after the sequence, M+1,-4. Edit Line 100 by typing EDIT100 and pressing ENTER. Next, type S0, use the space bar to move the cursor under the M of M-3,-4, and then type 6DIH3U to delete the six-character move, M-3,-4, replacing it with H3U. Then press ENTER and run the program.

This should accentuate the instep a bit more. To see what we have, mask Line 98 and edit Line 100 to change S40 to S8. After you have done this, run the program. Now our shoe print looks like a shoe print.

How would our shoe look with the sole and heel painted? We want to paint the sole in scale eight (S8) — the size we plan to use in our next tutorial. Therefore, we must use the PMODE4,1 screen, (256,192), and determine our paint points by using PSET.

To locate a point for the sole, key in 110 PSET(10,10,1) and run. Now let's locate a point for the heel. Try typing in 120 PSET(34,8,1) and running the program. It doesn't work. Try reversing the coordinates and running it again. This time it works.

Convert Line 110 to a PAINT statement by typing the following:

```
EDIT110  
HPAINT(10,10),1,1
```

Run it and then let's check the heel coordinates. Mask Line 110, and then

*"We will make a simple footprint starting with a rough sketch on graph paper, then using our modified Graph Paper program to put the sketch on the CoCo screen."*

At Point (3,11), we will make a line that moves for three units in a 315-degree angle, and moves up one unit. Pencil it in. That changes M-3,-4 to H3U. Ink over the pencil line in black.

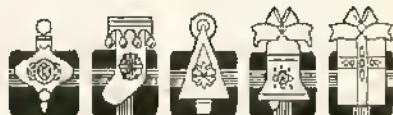

At this time, we have to modify Line 100 to incorporate these changes. If you look at your sketch, you will see that we need to modify the red portions of the sketch to the coordinates indicated by the black lines on the sketch. Note that the first change begins after F in Line 100.

Type EDIT100 and press ENTER. Use the space bar to move the cursor under 8. Type C6ID2 to change 8 to 6 and add

*Just in time to help you plan for those stocking stuffers, presenting our annual Christmas sale with offers that can't be resisted! Until December 31, take advantage of our special prices....*

For that confirmed CoCo nut, how about a disk of Christmas music for Lyra? Now only \$9.95 (regularly \$14.95). Or for the die-hard enthusiast, the complete **Lyra Library**, normally \$179.40, now only \$100.00. That's a savings of almost \$80! Or choose from a wide variety of music ranging from Bach to the Beatles. Each disk is packed with 5-8 part music, and takes 50 to 80 minutes to play. Included is a player program. Use Lyra for the best results. Each disk \$14.95.

Lyra, a powerful yet easy-to-use MIDI music composition program, is now better than ever! It has almost all the features you might want, including on-screen transpose, programmable MIDI filter, and comprehensive support of the MIDI standard. Many professional musicians use Lyra as a part of their recording studio, and music teachers find it a great aid to teaching music theory in schools! Version 2.6 comes with a 100 page manual, a CoCo to MIDI cable, and a 30 day money back guarantee (less restocking charge). Until December 31, only \$49.95!

(619) 690-3648 (evenings 6-10 PT)

**Other good stuff:** • **FB-01 Calc** is a program that creates event files for Lyra so you can set up custom configurations for your FB-01 from Lyra. Includes a manual packed with useful information about your FB-01. A must if you have an FB-01! \$19.95  
Ordering information: send check or money order. Sorry, no credit cards. COD is ok. Shipping and handling included in price. CA residents add 6% tax.

edit Line 120 by typing in and running the following:

```
EDIT120  
HPAINT(8,34),1,1
```

Finally, unmask Line 110 to see what the painted shoe print looks like.

We have created a shoe print that offers three options for the next tutorial. For practice, get back to the *Big Foot* screen. Mask lines 98,110 and 120, and change \$B to \$40 in Line 100. Find the correct PAINT line coordinates and paint the heel and sole in color C1. We will use Line 101 for this PAINT statement. Key in Line 101 without the REM marker and run the listing. What if you wanted to use color C2? Try it and see why I chickened out. Your choices are unlimited.

(When you are finished practicing, put the REM marker back in Line 101.)

Now all we need to do is make the left shoe print. For practice, you could create the left shoe in the same way that we designed the right one.

There is a better way. Flip over your graph paper drawing of the right shoe. You should be able to see the red and black outlines through the paper. (If not, go over the lines again — this time pressing a little harder.)

You may want to trace the two outlines onto the back of the paper in order to see the line more clearly. Be careful as you move from point to point. The top of the sole should be outlined in black. Connect the lower red portion and heel separator. And finally, use red

ink to run a zigzag line over the units above the heel that we will omit.

The black outline should indicate the final modifications. In pencil, sketch a line at the top of the shoe that moves left three units. Sketch a similar line up from the leftmost point on the shoe. Your point of origin is where these two pencil points meet, and this is where you will begin your second drawing.

(Save a copy or two of your work at this point.)

There are other ways to proceed with this second print, so mark the point of origin as (0,0) and open up more working space on the graph paper screen by changing B2 to 172 in Line 95. Next, add the following line:

```
96 COLOR 1: LINE(82,0)-(89,190),PSET,BF
```

We will use Line 105 to create the left shoe print. So begin the line by typing the following:

```
DRAW"C3S40BM90,0
```

Go ahead, Rembrandt, create. Copy from your new sketch. *Don't peek at the listing.* Work it out.

When you have completed your masterpiece, there is one slight problem. The shoes are reversed. How would you swap them? It's easy. Just swap the horizontal locating points in lines 100 and 105.

Now let's check out our shoes in PMODE4,1 by unmasking Line 98 and changing \$40 to \$B in lines 100 and 105. Now run the listing.

We must move the right shoe print by changing the location of the vertical coordinate to 20 in Line 100.

Paint the prints any way you like, but compare the two prints when you have painted the soles, when you have painted the heels, and when you have painted both. (Next, you may want to try sketching a pair of women's shoes, 6-by-15 units, using the same procedure we have already used.) You may even want to make a copy of your work.

Now, allow me to give you a few suggestions for creating clearer work in less time. First, sketches and drawings stand out best when done on SCREEN1,0 of PMODE4,1. They are as sharply defined as possible on CoCo's high-resolution, two-color screen. Second, when possible, make the entire design one long, continuous line; try to put locating coordinates only in the program's first DRAW statement. This allows much faster execution than when the CoCo is forced to jump from one set of coordinates to another. It also saves on the time it would take to plot those new coordinates. It is easy to pick up a location from a long DRAW statement and know exactly where it is in the sequence of movements. Finally, if you must make long jumps to new areas, use the B DRAW option. It works well when plotting a picture on graph paper.

That's it for this month. Enjoy your new creative abilities — who knows what is next? With CoCo, the DRAW statement and your imagination, the possibilities are endless. □

# Computer Island Educational Software

## ARROW GAMES

32K Ext. - \$21.95 tape/\$26.95 disk  
Six menu driven games for young children (ages 3-6) to teach directions. All games involve using the arrow keys ONLY. Games include: LADYBUG, BUTTERFLY, ARROW MATCH, KALEIDOSCOPE, RABBIT and DOODLE. Colorful graphics.

## FIRST GAMES

32K Ext. - \$24.95 tape/\$29.95 disk  
First Games contains 6 menu driven programs to delight and teach your early learners (ages 3-6). These games enrich the learning of colors, numbers, lower case letters, shapes, memory, visual discrimination and counting.

## CLOZE STORIES

32K Ext. - \$19.95 Tape/\$24.95 Disk  
These programs give students practice using the popular CLOZE reading technique. Each program contains grade appropriate short stories with key missing words to be deduced by the student. Available for grades 3, 4, 5, 6, OR 7. Please specify.

## DRAWING CONCLUSIONS

32K Ext. - tape \$19.95/disk \$24.95  
These programs contain short stories. Each story has two accompanying questions that ask the student to draw conclusions from the text. Available for grades 3-4 OR 5-6. Please specify.

## LOCATING STORY DETAILS

32K Ext. - disk only - \$24.95

These programs contain short stories. Each has an accompanying picture. Questions about story details refer to either the text or pictures. The disk generated graphics are an integral part of these attractive programs. Available for grades 2-3 OR 4-5. Please specify.

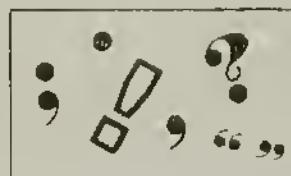

## FOREIGN LANGUAGE GAMES

32K Ext. - \$19.95 tape/\$24.95 disk  
(500 words)

### French or Spanish Baseball

Score base hits or home runs for correct answers. You're out if wrong. Correct answers supplied. Fun way to learn and practice vocabulary.  
PLEASE SPECIFY LANGUAGE.

## PUNCTUATION PRACTICE

32K Ext. - tape \$19.95/disk \$24.95  
On screen practice in proper usage of the familiar punctuation marks. Grades 3-7.

## MATH TUTOR SERIES

16K Ext.

These tutorials take the child through each step of the example. All programs include HELP tables, cursor and graphic aids. All allow user to create the example, or let the computer choose. Multi-level Great teaching programs.

### LONG DIVISION TUTOR

\$14.95 tape/\$19.95 disk

### MULTIPLICATION TUTOR

\$14.95 tape/\$19.95 disk

### FACTORS TUTOR

\$19.95 tape/\$24.95 disk

### FRACTIONS TUTOR (addition)

\$19.95 tape/\$24.95 disk

### FRACTIONS TUTOR (subtraction)

\$19.95 tape/\$24.95 disk

### FRACTIONS TUTOR (mult.)

\$19.95 tape/\$24.95 disk

## COMPUTER LITERACY

32K Ext. - \$19.95 tape/\$29.95 disk  
A computer literacy quiz exclusively for the Color Computer. Tests and scores from over 60 questions on a Hi-res upper and lower case screen. Reviews computer literacy and beginning programming knowledge. Ages 10 and up.

Dept. R 227 Hampton Green, Staten Island, N.Y. 10312

Send for catalog with complete descriptions.

Please add \$1.00 per order for postage. N.Y. residents, please add proper tax. FREE set of BINARY DICE, including full directions, with orders of 2 or more items.

*Use these routines to let your CoBBS system upload and download Xmodem protocol*

# CoBBS Xmodem Routines

By Robert John Grubb

The Color BBS System (*CoBBS*) by Richard Duncan (November 1985, Page 135) is one of the best BBS systems for the Disk BASIC CoCo. However, as the system is written, it has no reliable way of sending and receiving machine language, or packed BASIC programs. To remedy this, I have writ-

ten two machine language routines that allow *CoBBS* to upload and download using the Xmodem protocol. With these routines, the system can send or receive 100 blocks of data before loading more information or saving the information to disk. At 1200 baud, the system can send or receive one block per second.

Both routines will run on either a CoCo 2 or 3. I have added REMs to mark the lines that are specific to each computer. The programs are written for the CoCo 3 using DN ERR GOTO. When running the programs on a CoCo 2, change those commands to RUN T.

To allow *CoBBS* to run these new routines, a few lines in the main *CoBBS* program must be changed. Delete lines

Robert Grubb enjoys using his CoCo's for MIDIing his synthesizers, running a BBS, and playing games with his two sons. He enjoys programming in BASIC and machine language. Currently, he is working on an OS-9 Level II BBS system.

1200 to 1290 and 20440 to 20950, and add the following lines:

```
1200 POKE&H7E00,B:POKE&H7E01,
TD:POKE&H7E02,ZK:POKE&H7E03,
ZD:FORX=&H0 TO &H3:R$=M10$(D$,X+1),1):A=ASC(R$):POKE(&H7E04+X),A:NEXTX
1205 TR$=TR$+"DOWN":GOSUB
9615:PRINT"Loading Download
Protocols.":PRINT"Please
wait . . .":LOAD"XMSEND/SYS",R
1321 CLS:PRINT"1 - ASCII"

```

Make sure you make these changes to *COBBS.SYS* from a freshly powered-up computer after a PCLEAR1 statement, or you will lose some of the programming when you save it to disk.

## Receiving Uploads

*XMRECV.SYS* lets you receive uploads to *CoBBS*. When users first enter into this routine, they are prompted to press ENTER to continue. Line 40 contains a password that you, as SysOp, should choose. Any user who enters the correct password at this time can get a directory listing on all your drives. The user can then upload any file to any disk; and if that user uploads a file already on the disk, *the file is overwritten*.

If the correct password is entered, the screen will prompt File to U/L:. The user should then enter an eight-character filename. Next, the prompt EXT: will ask for a three-character

extension. Finally, the routine asks for the drive number (zero to three). The routine now tells the user to start sending. The host computer's screen clears, and shows the number of blocks received until the upload is finished.

To get a directory listing and granule count, the user types DIR (upper or lower case) for the filename and ENTER for the extension. The user then enters the desired drive number. At the end of the listing, the system identifies the number of free grans left on that disk.

If the user does not enter the correct password, the system identifies the number of free grans and asks for a *filename only*. The system takes this name, adds the extension /XUP to that filename and puts the file on the drive specified in the data line of the CoBBS menu.

When the upload is complete, the system asks the user if another file will be uploaded. If so, then the system reruns the program. XMRECV.SYS is a program that asks the user to type U to upload [See "CoBBS: A Look at the Commands," December '85, Page 153]. XMRECV.SYS has the same data types as the ASCII version of CoBBS with one

exception: While entering the correct password gives users full access to all disks, without this password users may upload only filenames with the extension /XUP.

All uploaded programs are saved as ASCII files on the disk. As SysOp, you can change the filenames to names that can be downloaded without problem. If you want to run the programs on your CoCo, convert them to the proper type (i.e., .BIN, or .BAS) before you can run

them. In the listings you will find a public domain file, FCONV.BAS, that will convert files for you. The file includes instructions.

XMRECV.ASM is the source code to the machine language routine used by XMRECV.SYS. I assembled it on the Radio Shack Disk EDTASM+ assembler. Type it in and assemble it to the CoBBS system disk as XMRECV.BIN.

Those of you who do not have an assembler can type in the BASIC pro-

grain, XMRECPK.BAS. This file will poke the values into upper RAM and save it to your disk. I have included checksums so that any mistakes may be identified by the line number.

### Sending Files

XMSEND.SYS lets you send programs via Xmodem. This file uses the same kinds of menus as the ASCII version. In this manner, the system remains virtually the same as it was originally set up by Richard Duncan. Therefore, you do not have to relearn how to set up downloads for your system.

On your *CoBBS* menu, press D to download. The data specification is 0COCO. The buffer number is 0, which means that the user's buffer is not opened and closed automatically. If the buffer number is 1 instead, the buffer opens, the directory is listed and the buffer is then closed. COCO is a four-character filename, in front of which the system adds DOWN, and at the end of which it adds /MNU. Therefore, the system searches all drives to locate a menu called DOWNCOCO/MNU.

The buffer numbers 3 and 4 change the data to BDPxxx, where B identifies the download type; D identifies the drive from which to download; and P allows no downloads of files with the extensions /SYS, /BIN or /BAK. When the buffer number is 3, the user can download only from the drive specified. When it is 4, the user has full access to all drives. The buffer numbers 3 and 4 allow the user to type DIR to get a directory on any drive.

When the variable B is either 3 or 4, the computer screen will prompt File to D/L. At this time, the user should enter the eight-character filename and extension to be downloaded. The system then asks for a drive number. If the file exists on that drive, the user is prompted for download type (i.e., ASCII/buffer control, ASCII/no buffer control, or Xmodem). If Xmodem is selected, the system does a block count and asks if the user wants to continue. (The system offers several places to abort in case users change their minds.) The system then goes to Receive mode and begins sending the program. If Variable B is either 0 or 1, the system displays the menu and then asks for the number to download. Once the system makes sure the file exists, it performs in the same manner as when 3 or 4 is the buffer code.

The ASCII transfers are the same as in the original *CoBBS* system.

Because the system takes the number

entered by the user and adds COCO to the front and /DDW to the end of that number, you will need to make a text file called DOWNCOCO/MNU that lists a number, program name and a description of that program. If a user enters 1 for download, the system looks on all drives for a file named COCD1/DDW. If the system locates that filename, it asks for the type of download (ASCII or XModem). From that point, the system prompts the user throughout the procedure.

XMSEND.ASM is the source code to the program XMSEND.BIN, which is used by XMSEN.SYS. Assemble it to your system disk as XMSEND.BIN. As with the other source code program, if you don't have an assembler, type in the program XMSNDPK.BAS. It will poke the routine in high RAM and then save it to disk.

## 1200-Baud Modification

In this article, I have included a schematic (Figure 1) describing the use of a transistor in determining the baud rate of a modem with a High Speed Indication Line (Pin 12 on the modem). This information is read by Cobbs through the left joystick port, and the entire circuit will fit inside the joystick plug. Cut Line 12 in the DB25 cable, which connects the modem to the RS-232 pack, and send it to the circuit. Next, change Line 40 in the USER.SYS program to read as follows:

```
40 CLS:EXEC&H100A:PDKE4652,0
:GOSUB10035
```

Add the following lines:

```
10035 IF JOYSTK(0)<30 THEN
PDKE 65387,56:PRINT"CONNECTED
AT 1200 BAUD":FDR X=1 TO 900:
NEXTX:RETURN
10036      POKE65387,54:PRINT"
CONNECTED           AT 300
BAUD":FDRX=1TD900:NEXTX:RETURN
10037 GDTD10035
```

You may have to play with the value returned by JOYSTK(0) to find the best value for your modem.

Enjoy these programs. If there are any problems, I can be reached on Delphi (username GRUBBY), or call my BBS at (614) 446-7430. I am online Friday through Sunday, from 6 p.m. to 11:30 p.m., at 300/1200 baud 8-bit, 1 stop bit, no parity.

*(Questions or comments about the programs may also be directed to the author at Route 4, Box 309, Gallipolis, OH 45631. Please enclose an SASE when requesting a reply.)* □

Hint . . .

## What's in Memory?

Until you type the DOS command, the computer's memory is mostly concerned with Color Computer BASIC. Once the DOS command calls the OS-9 operating system into action, the computer memory locations take in all sorts of procedures. When you use the `mdir` (module directory) command, a screen display of all modules now in memory appears.

Some of the modules listed on your screen are identical to those you will find in the CMDS (commands) directory of your OS-9 system disk. For instance, such often-used commands as `del` (delete), `list` and `load` are in memory and also available on the disk in the CMDS directory. But an infrequently used command like `backup` is found only on the disk.

Other modules listed to the screen when you use the `mdir` command are not on your disk. Most such modules are not usually commands, and thus not executable. Most of them relate to OS-9 system functions.

You can load commands into memory using the `load` command. For instance, if you type `load backup`, then the `backup` command enters memory as a module along with the other 50 or more modules. It stays there until you type `unlink backup`.

When you use the `backup` command without first loading it into memory, it is automatically loaded into memory, does its backup work, and then is automatically *unlinked* to remove itself from memory. If these things are done automatically, then why ever load `backup` into memory?

When you buy an OS-9-driven commercial program (say, a game), the `backup` command is not likely to be on the disk. You could then load `backup` into memory from your system disk, replace it with your new game disk, and then call for a backup, running it from memory. You should `unlink backup` once the job is finished.

HAWKSoft HAWKSoft HAWKSoft HAWKSoft HAWKSoft

**DOMINATION.....\$18.00**  
  
 MULT1-PLAYER STRATEGY GAME!  
 Try to take over the planet of YCNAN. Battle other players armies to take control of their provinces and defend yours. Play on a Hi-res map of the planet. Take the "RISK" and be a planet-lord today!!! Requires Coco 3 1 disk and joystick or mouse. See Rainbow Review JULY 88

**MYDOS.....\$15.00**  
  
 CUSTOMIZABLE! EPROMABLE!!  
 The commands Tandy left out!  
 MYDOS is an enhancement to Disk Extended Basic 2.1 on the CoCo 3. One command loadm and execute for M/L programs. Lowercase command entry and display on ALL screens. Screen echo and SAY command for RS Speech Pak. Point and click mouse directory.

**NEW FEATURES!!!!**  
 Supports double-sided and 40 track drives. Set any palettes you want on power-up (RGB or CMP). Power-up in any screen width and colors (or monochrome) you wish! More options than you can shake a joystick at!!! See Rainbow Review JUNE 87

**HAWKSoft KEYBOARD CABLE.....\$25.00**  
  
 UNCHAIN YOUR KEYBOARD!  
 Five foot extender cable for Coco 11 and 3. Move your keyboard where you want it! Installation instructions and tips included! Custom lengths available.

HAWKSoft P.O. Box 7112  
 Elgin, IL 60121-7112  
 312-742-3084

S&H always included. IL. orders add 7% sales tax.  
 Checks Money-orders or COD No credit cards.

# <<< GIMMESOFT >>>

A new generation of Color Computer products

## MAXSOUND

A High Quality Digital Audio Sampler and Sequencer

Turn your CoCo III into a REAL digital audio sampler with HIGH quality audio reproduction. Easily add exotic effects, ECHO, stuttering, speed shifting, sequencing, and reverse audio to BASIC or ML programs or GRAPHICS! Now includes Data Compression. Imagine recording any Voice, Music, or Sound effect and being able to use these DIGITAL recordings in your own programs! 3 disk sides includes: INTERFACT/BIN - ML driver for sound effects. G&M/BAS - Adds sound effects to Graphics. SHOWTIME and DEMO disks. SCOPE/BAS - Turns CRT into a Digital Oscilloscope to look at MAXSOUND waveforms. Version 3.0 upgrade ..... \$6.95 + Shipping & Handling

"Maxsound...bringing a new era to the CoCo Community"

-Cray Augsburg, June '88 Rainbow Review

CALL TO HEAR OVER THE PHONE DEMO (128k or 512k CoCo III only)

459.95

### Maxsound Soundtracks & Graphics

These exciting disks are samples of what can be created with MAXSOUND and CoCo Max III! Some work on 128k, some work without the MAXSOUND program and some are 512k 4 disk sides of unbelievable sounds and graphics! Just some of the titles are: Airwolf, Star Trek, Knight Rider, Warrior King Demo, Probe, and more are in the making! Prices range from just \$5.95 to \$9.95

Call or write for a complete catalog of titles available!

## V-Term Terminal Emulator

Communicate with VAX, UNIX, Mainframe, and BBS Systems!

### FEATURES:

- VT-100, VT-52, Vidtex (includes RLE graphics display), and standard CRT emulations.
- Developed and tested on a UNIX system using the EMACS and VI full-screen editors.
- All 128 ASCII characters accessible from the keyboard.
- Uses a high-resolution graphics screen to implement a highly readable 80-column screen.
- Menus can be operated concurrently with other terminal functions. (Disk Basic!)
- Full 28 line by 80 column screen, with 3 bottom lines protected for menus.
- Serial port up to 2400 baud, RS-232 Pak up to 9600 baud, DCModem Pak at 300 baud.
- XModem, XModem-CRC, Y-Modem, and ASCII file transfers directly to disk or memory.
- Prints disk or bulletin files with settable margins, baud rate and word wrap.
- Full 128k or 512k support with a RAMDISK like buffer. Monochrome monitor support.
- Capture bulletin, Snapshot, Conference mode, 35/40/80 Tracks, and over 56 pages of docs!

Version 02.00.00 upgrade ..... \$6.95 + S&H      Disk (128k or 512k CoCo III only) ..... \$39.95

A new generation of Color Computer products

## GRAPHICS-25

(512k CoCo III only) Great with MAXSOUND and/or CoCo Max III!  
Utilize the FULL 512k memory range of your CoCo III from BASIC for graphics! Create up to 25 ONBOARD HIRES SCREENS! Six new BASIC commands allow instant display switching while secretly drawing other screens. Save and load screens to and from disk. Copy one screen to another. Fast Graphics action, Smooth animation, and 100% Machine Language code. Requires DECB 1.0, DECB 1.1, or FKEYS III. Complete with documentation. Disk ..... \$24.95

## MAX-10

(CoCo III only) The dazzling Word Processor and document creator for the CoCo III! MAX-10 is the perfect partner for CoCo MAX III! Mix graphics and text to get great looking newsletters, flyers, etc... Includes Spelling checker! Requires joystick. (CoCo Max III owners deduct \$10) SALE .... \$74.95

## CoCo Max III

(CoCo III only) See April '88 review. Built in Animation! / Amazing Color Sequencing!!! Comes with Hi-Res Interface, MINILOAD/BAS, Demo Disk, CoCo Show Pgm. Requires joystick or mouse. SALE .... \$74.95

## MULTI-LABEL III

(CoCo III only) See July '87 review. An easy to use, versatile label creating program including many new CoCo III features. Print multiple items on each label! This one's a MUST for the CoCo III! Disk .... \$16.95

## FKEYS III

(CoCo I/II/III) See April '87 review. A user friendly, programmable function key utility that creates up to 20 function keys. EDITOR, DOS mods, Single or Double sided, 35/40 tracks, DISABLE, and it's EPROMable. Disk .. \$19.95

## SIXDRIVE

(CoCo I/II/III) This machine language utility modifies DECB 1.0, 1.1, FKEYS III, or ADOS to allow the use of 3 double-sided drives (or 2 D/S drives and J&R's RAMDISKS) as 6 S/S drives. Disk ..... \$16.95

## AUTO DIM

(CoCo III only) See Jan. '88 review. This hardware device protects your monitor, or TV from IMAGE BURN after a few minutes of inactivity from your keyboard. Illustrated and easy to install. Hardware ..... \$29.95

## MPI-CoCo Locking Plate

(CoCo III only) See Sept '88 review. Protects your CoCo III and MultiPak interface from destroying each other! Please specify MPI number 26-3024 or 26-3124 when ordering! SALE ..... \$7.95

## Warrior King

(CoCo III only) Become Rastann, Warrior King, on the quest to regain his rightful crown hidden deep within a sinister land. Battle monsters, gain magic & weapons, and travel thru harsh wilderness & dark castle dungeons in this medieval realm. From the creator of Kung-Fu Dude comes this awesome arcade game for the CoCo III! Uses the most detailed 320 x 200 16 color graphics & high speed ML code to vault you into a world of fantasy! Dare ye challenge the many perils ahead to become Warrior King? Requires 128k CoCo III, Disk drive, and joystick .... \$29.95

## HALL OF THE KING TRILOGY

(CoCo I/II/III) See June '86 & Nov '87 reviews. The epic adventure is back! The largest adventure campaign ever seen for the CoCo is again available. A total of 6 DISK SIDES of intense graphics adventure will have you playing for weeks! Each section is a 2 disk stand alone adventure, but all 3 together form an epic saga! Quest for the legendary Earthstone in the ancient dwelling of the dwarves while you enjoy the classic graphics that made this trilogy famous! Each adventure can be purchased separately for only \$29.95, the lowest price ever, or you can SAVE and purchase the entire set for only \$74.95. Requires 64k, Disk drive, (and composite monitor for the CoCo III). Please specify HALL of the King I, II, or III ..... \$29.95 each or the entire 6 DISK Trilogy for only ..... \$74.95

## In Quest of the Star Lord

(CoCo III only) See Aug '88 review. This is THE graphics adventure for the CoCo III! Unparalleled 320 x 200 animated graphics will leave you gasping for more! You quest for the Phoenix Crossbow in this post-holocaust world of science and fantasy. Full 4 Disk sides of mind-numbing adventure! Requires 128k CoCo III and Disk drive. HINT SHEET ..... \$3.95 (+ \$1.00 S&H by itself) Disk ..... \$34.95

## KUNG-FU DUDE

(CoCo I/II/III) See Feb. '88 review. An exciting arcade game. The BEST karate game ever for the CoCo! Destroy opponents and evade obstacles as you grow ever closer to your ultimate objective! Spectacular graphics, sound effects, and animation! Requires 64k, Disk drive, and joystick. Now displays color on CM8. Disk .... \$24.95

## PYRAMIX

(CoCo III only) See Dec. '87 review. Brilliant colors, sharp graphics, and hot action in this 100% ML arcade game. You'll enjoy hopping Kubix around the pyramid, avoiding Kaderl, Smack, Smuck, & the Death Square! Disk .. \$19.95

## AD&D Character's Companion

(CoCo I/II/III) This great timesaving utility helps create compatible AD&D characters. Includes dice rolling routine, pick ability, race & class. Buy from the Players Handbook, magic items & spell materials. Save, load, and print character info. 3 Disk sides .... \$24.95

## White Fire of Eternity

(CoCo I/II/III) See Dec '86 review. Enter the era of monsters & magic. Search for the legendary power of White Fire throughout the Forbidden Wood & Dark Caverns in this 64k animated adventure! Disk..\$19.95

## Champion

(CoCo I/II/III) See May '87 review. Become a superhero in this action adventure! Disk..\$19.95

## Dragon Blade

(CoCo I/II/III) See Nov '86 review. Slay evil dragon in this 64k animated adventure! Disk..\$19.95

## Feature

*A program to help memorize the list  
of U.S. Presidents*

# Washington Adams Jefferson . . .

By Ralph D. Miller

**W**hen my eldest daughter was learning the learning of the list of presidents of the United States, I wrote *Presidents* to help her. It has been tested by members of her fifth grade class and found to be effective. The techniques used are quite simple, so it is a good choice for beginning programmers to use in experimenting with modifications.

As written, *Presidents* runs in 16K Extended Disk BASIC. Instructions follow to modify the program for cassette-ed systems. It can also be made usable on non-extended machines by deleting lines 710, 720 and 730, and by changing GOTO 710 in Line 172 to GOTO 740.

The printer baud rate is set in Line 740 and as written, is set for 2400 on my LDS-460 printer. For use at 600 baud, change POKE 150, 17 in Line 740 to POKE 150, 87. For 1200 baud, use POKE 150, 41. Some systems prefer POKE 150, 18 or 2400-baud operation. The only other printer code in the program is in Line 794 (CHR\$(12)) for form feed.

*Presidents* is designed to run a directory program when you exit. The one that I use is *Hello* by Doug Heyza (August 1985, Page 69). If you don't want to use such a program, change Line 160 to IF Z\$="R" THEN CLS:DIR.

To modify the program for cassette use, take RETURN (TO K-MENU) out of Line 110, and delete the spaces after END until the 'g' in qUIT is directly under the 'h' in HARD. Next, delete Line 160. Finally, in Line 130, delete AND Z\$<>"R".

That's about it! *Presidents* is neither long nor complex, type it in and give the children a bit more perspective history. I'm sure the comments on progress section (lines 15 through 935) could be much more creative, so add your own, perhaps personalized for your child.

Questions or comments concerning this program may be directed to the author at P.O. Box 13322, Tallahassee, FL 32317. Please enclose an SASE when requesting a reply. □

*John Miller is a broadcast engineer on the systems staff at John H. Phipps Broadcasting. He lives in Tallahassee, Florida.*

## "The Year Of The Hard Drive"

### Hackers Holiday Special

#### Hard Drive Kits

(Drive, SASI controller, Power Supply & Cables)

5Meg.....\$128

8Meg.....\$140

10Meg.....\$160

\*Bisto Hard Drive Interface...\$50.00

20Meg System. Complete. Ready to plug in and
run....\$350.00

### ARIZONA SMALL COMPUTER PERIPHERALS

930 W. 23rd St. Suite 26

Tempe, Az. 85282

Phone (602)-829-8028

\*When purchased with kit.

All drives formatted in CoCo OS9 format. Os9 SASI drivers included.  
Burke & Burke HyperIO supported.

Add \$6.00 S&H on all drive orders.

### JUBILEX

A fast paced game that requires both skill and quick thinking. Pilot your ship over the planet Jubilex. Avoid shots from the ground while you destroy their aircraft. Complex weapon system. Requires joystick, CoCo III, and disk drive. \$25

### GAT BACKUP

A 128k CoCo III backup utility that gives you the options to backup only the granules used, a section, or the entire disk. Makes multiple copies. Copies 35 tracks in two passes. Formats and gives directories. Requires CoCo III and disk drive. \$15

### DIASM

A disassembler that loads a file and allows you to disassemble it as if it were in memory, no matter where the program is really located. Works with auto-executing programs. Many other features. Supports printer. CoCo I, II, or III. Disk only. \$20

All programs are in machine language. Add \$5 per program if you want the source file included. We pay shipping and sales tax. Write for more information, or send check or money order to:

**GSW Software**  
**8345 Glenwood**  
**Overland Park, KS 66212**

# The BBSs in North America

For our Telecommunications issue, we at THE RAINBOW have compiled a list of bulletin board systems running in the United States and Canada. Our list was compiled with the help of all SysOps who answered our request for information. We hope this list will make BBS users aware of the BBS systems in their area.

Our list arranges known BBSs by state and includes the BBS phone number, BBS name and the parameters. The systems are up 24 hours a day, seven days a week, unless otherwise noted by a superscript after the BBS name. Use this list to sample various BBSs, and enjoy the chance try a new system.

If you are running a BBS and would like to have it listed in a future issue of THE RAINBOW, send us a letter, including the information listed here to: The Rainbow BBS List, P.O. Box 385, Prospect, KY 40059.

# The Professional Color Computer

## Enhancements for Productivity from HJL Products

For peak performance with any computer, you have to get information into and out of the system as easily as possible.

This is the purpose of the HJL family of professional enhancements for ALL MODELS of the Color Computer, including CoCo 3.

### The Self-contained ProCase-57 Keyboard • \$79.95 NEW

It's the popular HJL keyboard perfectly tilted into its own sleek, low-profile case. Put your CoCo on a shelf or hang it on the side of your desk. ProCase-57 comes with 5-foot cable; installs in just a few minutes with no soldering.

### The HJL-57 Keyboard Kit • \$59.95/69.95

Overwhelming favorite of serious CoCo users worldwide, the HJL-57 keyboard provides the smooth, consistent feel and reliability you need for maximum speed with minimum input errors. Installs in your color computer without soldering. Just \$59.95 for Original or F-version. Kits for CoCo 2 and CoCo 3 are \$69.95.

### The NumberJack Keypad • \$59.95

A self-contained numeric keypad for serious number-crunching. Besides the

numbers, it has all the cursors, symbols and math keys, including autoshifted ADD and MULTIPLY. Includes cable and connectors for solderless installation.

### The Monitor Adapter • \$25.95

This universal driver works with all monochrome monitors. Easily installed without clips, jumpers or soldering (except some CoCo 2s with soldered-in video chips). Here's crisp, flicker-free monitor output with all the reliability you've come to expect from HJL Products.

### The Monitor • \$99.95

Our high-resolution amber monitor gives you the display preferred by most computer pros. Once you've used it, you'll never go back to the TV set. 12-inch CRT has etched non-glare faceplate. (Requires adapter sold above)

### Quick Basic Plus • \$19.95

High-performance programming aid works with any CoCo that has 4 function keys. 26 one-touch BASIC statements, 10 user-defined macros at a time (save as many sets of macros as you like), auto line-numbering, instant screen dump to printer, and global search, make this software ideal for any BASIC programmer. Specify disk or cassette.

### The SoftSwitch • \$89.95

Connect any two parallel printers to one computer; select printers manually or insert a simple printer code in the text to be printed for fully-automatic, all-solid-state switching. Complete with three cables and operating instructions.

### The HJL Warranty

Every HJL product comes with a full, one-year warranty and the exclusive HJL 15-day unconditional guarantee (except software).

### Pick a Pair and Save 15%

Take 15% off the price of any two or more products shown here. Just mention this ad when you order.

## Call Now, Toll Free

**1-800-828-6968**

In New York 1-800-482-4891  
International calls: 716-238-8368

Div. of Touchstone Technology Inc.  
955 Bultalo Road • P.O. Box 24954  
Rochester, New York 14624

**Ordering Information:** Specify model (Original, F-version, or CoCo 2 Model Number). Payment by C.O.D., check, MasterCard, or Visa. Credit card customers include complete card number and expiration date. Add \$2.00 for shipping, \$3.00 to Canada; except monitors (call for shipping charges before ordering monitor). New York state residents add 7% sales tax. Dealer inquiries invited.

Modify an old favorite to use on the CoCo 3

# A *Remote* Update

By Paul Alger

I've been running my own BBS for a few years and have always used THE RAINBOW'S *Remote* (November '85, Page 106) and *Remot232* (November '86, Page 70) as my terminal drivers. When I purchased my new CoCo 3, however, I found that the *Remote* programs were not compatible with 40- and 80-column screens. To alleviate this problem, I modified *Remot232* to allow the use of 40- and 80-column screens and to provide scroll- and CLS-protected areas on all screens. For those of you who would like to use the *Remote* programs in a 40- or 80-column format, allow me to present *Remote 3*.

*Remote 3* will work on any CoCo that has at least 32K of memory. The program includes all of the *Remote* pro-

---

Paul Alger, SysOp for the Time Machine BBS, holds a bachelor's degree in audio engineering. Paul currently works as a professional musician.

Table 1

<i>Remote 3 Pokes</i>		<i>Clock Pokes</i>	
Location	Description	Location	Description
7D00	If 7D00 contains 1, the BREAK key is disabled from the remote user. If it contains 0, the remote user can use the BREAK key to break into BASIC.	7F00 to 7F14	These locations contain a 20-byte CLS- and scroll-protected area. Poke the string to be protected into this area.
7D01	If 7D01 contains 1, the incoming character is displayed in the right-hand corner of the scroll-protected area. If it contains 0, the feature is turned off.	7F1D	Each time the clock reaches 24:00 (midnight), this location increments by 1. Peek this location to roll over the date.
7D02	If 7D02 contains 1, line feeds are sent with a carriage return. If it contains 0, no line feeds are sent.	7F1E	Location 7F1E contains a count-down timer. When a user logs on, poke the number of minutes you allow the user to remain online. Periodically peek this location. Time is up when the value is 0.
7D03	If 7D03 contains 0, normal characters are sent to the remote terminal. Any other value echoes the character with that ASCII code to the remote terminal. POKE-&H7D03,65 will echo all A's to the remote terminal no matter what you see on your terminal screen. (Use this feature for password entry.)	7F20	If 7F20 contains 1, the clock display is turned off. A 0 indicates that the display is on.
7D04	If 7D04 contains 0, input from the remote terminal is not affected. A 1, however, converts the input from the remote terminal to all uppercase, and a 2 converts the input from the remote terminal to all lowercase.	7F21	If 7F21 contains 0, the string display is turned off. A 1 indicates that the string is displayed.
7D05	This location works the same as 7D04 except that instead of the input, the output from the remote terminal is converted.	7F22	If 7F22 contains 0, the "chat" flag is turned off. A 1 indicates that the flag is on. The "chat" flag flashes in the right-hand corner of the scroll-protected area.
7D06	Cursor value (32-column screen only).	7F23	This is the clock speed. The default value is 50. Poking any other value in this location changes the speed of the clock. The higher the number, the slower the clock.
7D07 & 7D08	Used for scroll-protection in <i>Remote</i> . Poking here has no effect on <i>Remote 3</i> .	7FD5	This location will invert the clock display on the 32-column screen only. If the location contains 48, the clock will appear green on a black background. If it is 112, the clock will appear black on a green background. Any other value will produce garbage in the clock display.

```

grams' original bells and whistles except scroll-protection. To remedy this loss, I have included a software clock that allows 20 characters of scroll- and CLS-protection.

Included with this article are four listings. The first is the assembly listing for the *Remote 3*. This version of the program is for use with the RS-232 pack, and the pack *must be installed* before the program will work properly. (I do have a serial-port version of *Remote 3* and would be glad to send it to anyone who wants it. To receive that listing, please send me an SASE, a blank disk and the necessary postage. The address appears at the end of the article.)

Listing 2 is a software clock, which uses interrupts to allow the clock to be updated during disk access. The clock program provides CLS- and scroll-protection as well as a few other features I wanted for my BBS operation.

Listing 3 is a BASIC loader that creates *Remote 3* and the software clock in memory. It then saves these two programs as one *workable* ML file on tape or disk.

Finally, I've included a short demonstration program, Listing 4. This demonstration offers a few examples of the program's various uses, including those for the new features. This demo program can only be used on a CoCo 3 and online at 300 baud.

All program features are listed with their corresponding memory locations in Table 1. The descriptions presented for each location include both the program feature and the values used to achieve these results.

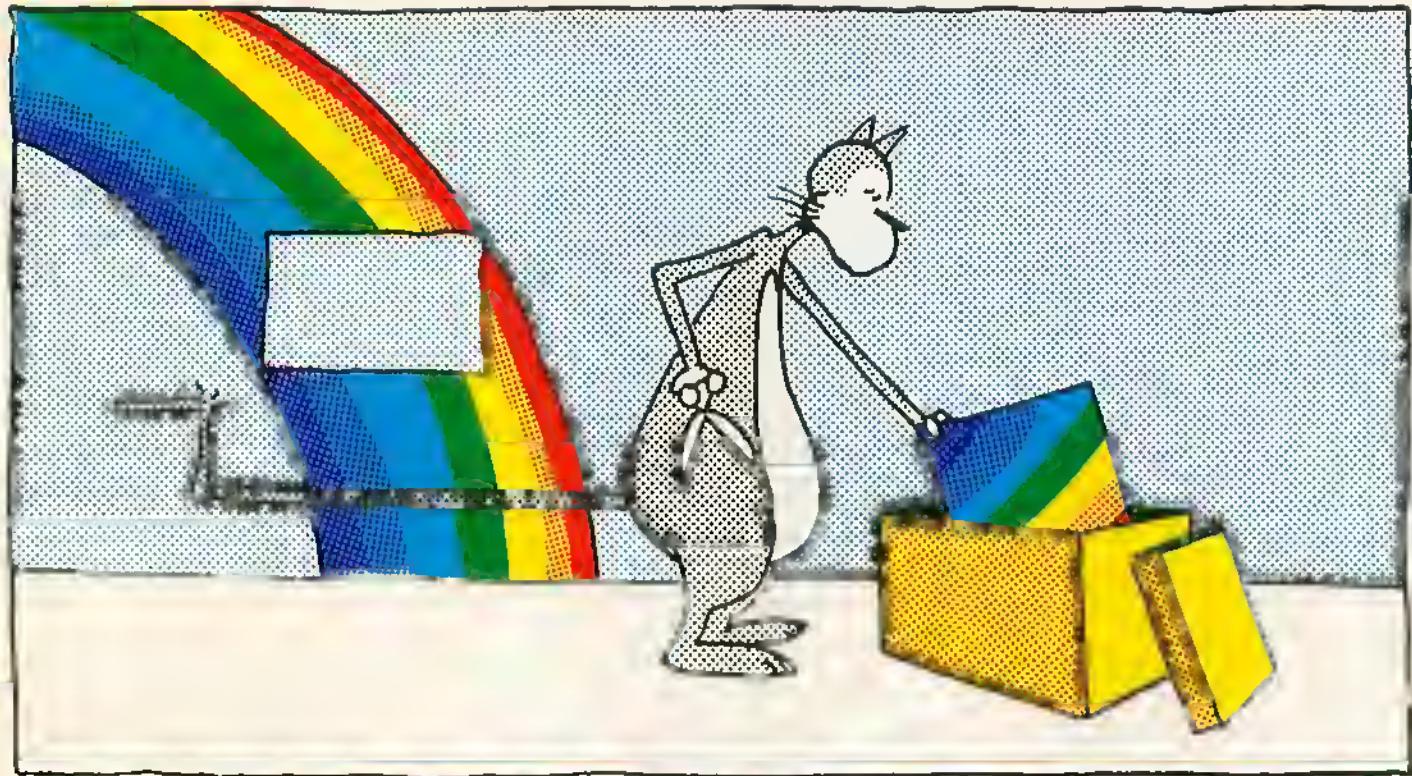

*Remote 3* does have one small annoyance. The cursor does not self-destruct when the backspace key is pressed. If that bothers you, type the following:

```
POKE&H7D06,96
```

The bug (and the cursor) will disappear.

If you would like to sample a BBS that uses this terminal driver, give my BBS — the Time Machine — a try. Call (509) 586-2559 or (509) 586-2160. The BBS runs at 7-bit, 1 stop bit, even parity, 300/1200 baud, 24 hours a day. The BBS features a multi-player D & D game, a multi-player *World War* game and an updated version of my *Galactic Conflict* game. Give me a call sometime.

(Questions or comments concerning these programs may be directed to the author at 1303 West 26th, Kennewick, WA 99337. Please enclose an SASE when requesting a reply.) □

# HOW DO YOU GIVE A RAINBOW?

**It's simple — Give a RAINBOW gift certificate . . .**

Let a gift subscription to THE RAINBOW carry the premier Color Computer magazine right to your friends' doorsteps. THE RAINBOW is *the* information source for the Tandy Color Computer.

Each month, your friends will enjoy the intelligent programs, reviews and articles written exclusively for their CoCo.

First, your gift will be announced in a handsome card. Then, all year 'round, they'll remember you and your thoughtfulness when they get each edition of THE RAINBOW — more than 200 pages loaded with as many as 24 programs, 15 regular columns and lots of helpful hints and tips.

Generosity benefits the giver, too. There'll be no more tracking down borrowed copies of THE RAINBOW. Your collection will be safe at home.

Give a RAINBOW gift certificate and let your friends in on the fun. THE RAINBOW is the perfect companion for the Color Computer!

**Get your order to us by November 25 and we'll begin your friends' subscriptions with the January issue of RAINBOW.**

Please begin a one-year (12 issues) gift subscription to THE RAINBOW for:

Name \_\_\_\_\_

Address \_\_\_\_\_

City \_\_\_\_\_ State \_\_\_\_\_ ZIP \_\_\_\_\_

**From:**

Name \_\_\_\_\_

Address \_\_\_\_\_

City \_\_\_\_\_ State \_\_\_\_\_ ZIP \_\_\_\_\_

My payment is enclosed.

Mail to:

**Rainbow Gift Certificate, The Falsoft Building, P.O. Box 385, Prospect, KY 40059**

For credit card orders call (800) 847-0309, 8 a.m. to 5 p.m. EST.

All other inquiries call (502) 228-4492.

Subscriptions to THE RAINBOW are \$31 in the United States; U.S. \$38 in Canada. The surface rate to other countries is U.S. \$68; the air rate, U.S. \$103. Kentucky residents add 5% sales tax, U.S. currency *only*, please. All subscriptions begin with the current issue. Please allow 6 to 8 weeks for delivery. In order to hold down non-editorial costs, we do not bill.

## About The One-Liner Contest . . .

THE RAINBOW's One-Liner Contest has now been expanded to include programs of either one or two lines. This means a new dimension and new opportunity for those who have "really neat" programs that simply just won't fit in one line.

Here are the guidelines: The program must work in Extended BASIC, have only one or two line numbers and be entirely self-contained — no loading other programs, no calling ROM routines, no poked-in machine language code. The program has to run when typed in directly (since that's how our readers will use it). Make sure your line, or lines, aren't packed so tightly that the program won't list completely. Finally, any instructions needed should be very short.

Send your entry (preferably on cassette or disk) to:

**THE RAINBOW  
One-Liner Contest  
P.O. Box 385  
Prospect, KY 40059**

# The COCO hardware store

**CRC COMPUTERS**

**DISTO Super Controller I**

**\$99.95**

A Superb Controller. Along with the included C-DOS, plug-in three more software selectable DOSes or 2764 or 27128 EPROMs burned to your liking.

The Internal Mini-Expansion-Bus lets you add some incredible features to the controller. Disto Super Add-Ons were designed to fit neatly inside the controller case.

**DISTO NEW 3in1 Multi-Board Adapter**

**\$59.95**

This Muti-Board is an adapter that plugs in any Disto Super Controller, Ramdisk or MEB Adapter.

It includes a new and improved Printer Port (Centronics compatible), a faster Real Time Clock (works at 2MHz.) and a true RS-232 Serial Port (external 12 volt AC adapter required). DB25 cable included.

It fits neatly inside the metal case and is still within Tandy's power limits. It also works with or without a Multi-Pak.

**NEW DISTO RS-232 SuperPack**

**\$49.95**

- A Stand-Alone (Multi-Pak required) adapter that gives the user a true RS-232 Serial Port.
- Completely compatible with OS9's ACIA software.
- Compatible with software that requires the Tandy Deluxe RS-232 Pack.
- DB-25 cable included.

**CRC COMPUTERS INC.**

10802 Lajeunesse, Montreal,  
Quebec, Canada H3L 2E8

**1 - 514 - 383 - 5293**

We accept phone orders  
Include S&H of \$4 or \$8 if order exceeds \$75

Sorry: No personal cheques

See You At Princeton RAINBOWtest!

## Fantastic Super Controller II

- Radio Shack/Tandy controller compatible.
- Works on all COCOS - 1, 2 or 3 with or without Multi-Pak Interface.
- One 24/28 pin socket for 8K ROM, 2764, or 27128 EPROM.
- Internal MINI-EXPANSION-BUS connector for one DISTO Super Add-On.
- Low Power draw; within COCO's requirements.
- Gold Plated edge connectors.
- Under OS-9:

- Buffered Read/Write sector achieved without halting the CPU.
- Continual use of keyboard even while reading or writing to disk.
- System's clock no longer loses time during Read & Write.
- NMI is blocked and transferred to IRQ in software for low CPU overhead.
- Completely interrupt driven for fast & smooth Multi-Tasking operations.
- Drivers written by KEVIN DARLING

**\$130.**

**DISTO SUPER ADD-ONS**

**\$39.95**

### • Real Time Clock & Printer Interface

Have the Real Time, Date and Year displayed on your screen at a simple command.

**\$54.95**

### • Mini EPROM Programmer

A LOW COST EPROM Programmer that attaches directly to any Oisto Super Controller or MEB adapter to program those often used utilities.

**\$49.95**

### • Hard Disk Interface

A Hard Disk Interface fully compatible with SASI controller. Fits inside the Super Controller, Ramdisk or MEB Adapter. OS-9 drivers included. Also available with RS-232 Serial Port.

**SCALL**

### • Super RAM 3 ZeroK Board

Now is the time to upgrade your COCO 3 to 512K of memory. Just add the memory chips and install in your COCO 3.

**\$24.95**

### • MEB Adapter

A Stand-Alone Mini-Expansion-Bus in which you can plug any other Disto Adapter directly in a Multi-Pak without the need for a Super Controller or Ramdisk.

**4in1**

**Super Board**

Coming this fall to a dealer near you

Real Time Clock, Printer Port,  
RS-232 & Hard Disk Interface  
all in one neat package

## About Your Subscription

Your copy of THE RAINBOW is sent second class mail. You must notify us of a new address when you move. Notification should reach us no later than the 15th of the month prior to the month in which you change your address. Sorry, we cannot be responsible for sending another copy when you fail to notify us.

Your mailing label also shows an account number and the subscription expiration date. Please indicate this account number when renewing or corresponding with us. It will help us help you better and faster.

For Canadian and other non-U.S. subscribers, there may be a mailing address shown that is different from our editorial office address. Do not send any correspondence to that mailing address. Send it to our editorial offices at Falsoft, Inc., The Falsoft Building, P.O. Box 385, Prospect, KY 40059. This applies to everyone except those whose subscriptions are through our distributor in Australia.

*Christmas Sale!*

## Tandy® Color Computer 3™

Save \$70 on  
a gift for the  
whole family.

A powerful computer for personal productivity,  
education and family fun—now just \$129<sup>95</sup>.

Have a colorful Christmas with the advanced Color Computer 3. This powerful computer is perfect for all kinds of applications: word processing, education, entertainment, programming, graphics and more. It's a gift for the whole family.

Start computing Christmas day. Just attach the Color Computer 3 to your color TV, and you're ready to begin programming in BASIC. Or plug in a

Program Pak™ for instant fun and games, personal finance and many other applications. The Color Computer 3 is compatible with software and accessories designed for our popular Color Computer 2.

Add a monitor for advanced graphics. For razor-sharp color graphics, add our CM-8 high-resolution monitor. With the CM-8, you can achieve up to 160×192 or 320×192 resolution

graphics using 16 colors, or 640×192 with 4 colors.

Save on a disk drive. To make the Color Computer 3 even more powerful, add a disk drive, now on sale for just \$199.95. You can store over 156,000 characters of programs and data on 5 1/4" diskettes.

Come in today! The Color Computer 3 offers uncompromising performance at an incredible sale price.

**Tandy Computers: Because there is no better gift value.™**

Sale ends 12/24/88. Reg. \$199.95. FD-502 Color Disk #0 reg. \$299.95. Prices apply at Radio Shack Computer Centers and participating stores and dealers. Monitor platform sold separately.

# COMPUTER AIDED INSTRUCTION

Educational Programs for Students Grade K-12 and Adult Self Studies

## NEW PROGRAMS FOR YOUR TANDY 1000 AND TRS-80 COLOR COMPUTER

Compatible with Apple - Atari - Commodore - TRS 80 I, III, 4 - IBM PC Jr.

*16 New Programs now available in Basic Spanish*

### Interactive Tutorial Programs for Home or Classroom Use

Over 1000 programs for your selection with 32 now available on disk for the Color Computer and 500 now available for the Tandy 1000.

#### "We're Your Educational Software Source"

Subject	No. of Programs
Reading Development	256 (4 on disk)
Reading Comprehension	48 (4 on disk)
Mathematics	128
Algebra	16 (16 on disk)
History	32 (4 on disk)
Spelling	16
Government	16
Physics	16 (4 on disk)

#### 16 Programs in each of the following:

Children's Tales - Carpentry - Electronics  
Health Services - Office Skills - Statistics  
First Aid/Safety - Economics - Business  
Accounting - Psychology - MUCH MORE!

Send for our free catalog of over 1000 Dorsett educational programs for Atari, TRS 80, Apple, IBM PC Jr., Commodore, Tandy 1000, etc.

Apple II, TRS 80 I, III, & 4, and Commodore 64 computers require respective conversion kits (plug-in board and stereo cassette player), \$89.00. Atari 400/600/800/1200 computers require the Atari cassette recorder and the Dorsett 4001 Educational Master Cartridge, \$9.85. For the IBM PC Jr. a cassette adapter cable and a good cassette recorder are required. The Tandy 1000 requires the Dorsett M1001 speaker/PC board kit, \$89.00, and a standard cassette recorder. A Radio Shack CCR-81 or CCR-82 is recommended.

**CASSETTES:** \$59.50 for an album containing a 16-program course (8 cassettes with 2 programs each); \$9.95 for a 2-program cassette.

**DISKS:** \$14.95 for a one-program disk; \$28.95 for two disks; \$48.95 for four disks. All disks come in a vinyl album.

Dealer Inquiries Welcome

# DIGISECTOR DS-69B

## NEW VIDEO DIGITIZER FOR THE COCO 3

(AND ALL OTHER COCOS...)

SUPER  
RESOLUTION !!!

COCO 3 SCREEN

**USE YOUR COCO 3 TO ITS FULL POTENTIAL!**  
Use The Micro Works' DIGISECTOR™ DS-69 or DS-69B and your COCO 3's high resolution graphics to capture and display television pictures from your VCR or video camera. The DIGISECTOR™ systems are the only COCO video digitizers available that accurately capture and reproduce the subtle shades of gray in TV pictures!

- **COLOR:** Add color to your screen for dramatic special effects.
- **HIGH RESOLUTION:** 256 by 256 *spatial resolution*.
- **PRECISION:** 64 levels of grey scale.
- **SPEED!** 8 images per second on DS-69B, 2 images per second DS-69.
- **COMPACTNESS:** Self contained in a plug-in Rompack.
- **EASY TO USE:** Software on disk will get you up and running fast!
- **COMPATIBLE:** Use with a black and white or color camera, a VCR or tuner.
- **INEXPENSIVE:** Our low price puts this within everyone's reach.

### POWERFUL C-SEE 3.3 SOFTWARE

This menu-driven software will provide 5 and 16 shades of gray to the screen and to the printer with simple joystick control of brightness and contrast. Pictures taken by the DIGISECTOR™ may be saved on disk by C-SEE 3.3 and then edited by our optional MAGIGRAPH, or by COCO MAX or GRAPHICOM. This versatile new software is included in both DIGISECTORS™

<b>DS-69B and C-SEE 3.3</b>	<b>\$149.95</b>
<b>DS-69 and C-SEE 3.3</b>	<b>\$ 99.95</b>

### TRADE IN YOUR OLD DIGISECTOR™

If you already have one of The Micro Works' DS-69 or DS-69A DIGISECTORS™, you may return it to us and we will upgrade your unit to a DS-69B.

<b>UPGRADE DS-69A to DS-69B</b>	<b>\$49.95</b>
<b>UPGRADE DS-69 to DS-69B</b>	<b>\$69.95</b>

The DS-69B comes with a one year warranty. Cameras and other accessories are available from The Micro Works. DS-88 version available for IBM PC.

### NO RISK GUARANTEE

If you are not completely satisfied with the performance of your new DS-69B, you may return it, undamaged, within ten days for a full refund of the purchase price. We'll even pay the return shipping. If you can get any of our competitors to give you the same guarantee, buy both and return the one you don't like. We know which one you'll keep.

Purveyors of Fine Video Digitizers Since 1977.

# RAINBOW

The COLOR COMPUTER MONTHLY MAGAZINE

## Back Issue Availability

For greater convenience, order RAINBOW Back Issues through the Rainbow Magazine Services area of our Delphi CoCo SIG.

### BACK ISSUES STILL AVAILABLE

Have you explored the wealth of information in our past issues? From our very first, four-page issue to many with more than 300 pages of material, it's all just for CoCo users — a great way to expand your library!

### A WORLD OF INFO AT A BARGAIN PRICE

All back issues sell for the single issue cover price. In addition, there is a \$3.50 charge for the first issue, plus 50 cents for each additional issue for postage and handling if sent by United Parcel Service. There is a \$5 charge for the first issue, plus a \$1 charge for each additional issue on orders sent by U.S. Mail. UPS will not deliver to a post office box or to another country.

### MOST ISSUES STILL AVAILABLE

Issues July 1981 through June 1982 are available on white paper in a reprint form. All others are in regular magazine form. VISA, MasterCard and American Express accepted. Kentucky residents please add 5 percent state sales tax. In order to hold down costs, we do not bill, and no C.O.D. orders are accepted.

Due to heavy demand, we suggest you order the back issues you want now while supplies last.

To check availability and order, review and fill out the form on the next page and mail it with your payment to:

**THE RAINBOW**  
 The Falsoft Building  
 P.O. Box 385  
 Prospect, KY 40059

### Vocal Freedom — CoCo Claims the First Amendment!

Imagine coming home one day and calling out, "Hello, is anyone home?" as usual. Suddenly, your best friend's voice answers, "Hi, I am speaking to you from inside your Color Computer! I decided to do a little experimenting, and I must have done something wrong, because here I am inside!"

Then you hear your dog barking and your friend telling him to be quiet. You're beginning to be more than a little curious, because it really *does* sound like your friend's and your dog's voice coming from a machine. You go into the next room and see your beloved Color Computer on. Just as you clear the door

it says, "I know this is a little hard to believe, but it's really my voice talking to you, and I'm getting kind of hungry, so I want to come out. You better not shut the computer off, or I might disappear forever!"

Well, the barely controlled giggling from the closet indicates that your friend is not *really* in the computer, and Fido's wagging tail reassures you that he's OK, too. But you *have* to know — what is this amazing new device that makes your CoCo sound exactly like your best friend? You don't have long to wait, for soon the numbers on the display stop moving, the screen flashes

red and a stranger's voice says, "*Vocal Freedom* is ready!"

Imagine being able to write a program in BASIC and include sound effects like the whine of a jet fighter plane or the plunk of a piano. Or even a person talking and laughing or singing. Imagine the capability for a myriad of sound effects and human voices loaded into memory from file after file and played back at different speeds or in different orders, or all at once. And this is no cheap imitation — this is the real thing; whatever it is that the computer has heard, it will reproduce.

OK, you say, what is this amazing device, this *Vocal Freedom*? It's a software/hardware package from Dr. Preble's Programs that turns the Color Computer into a digital voice recorder (DVR). DVR is the same recording principle used in compact disc players.

*Vocal Freedom* runs on the CoCo 1, 2 or 3 with at least one disk drive. In

addition to the DVR program, you can also buy a companion program called *Vocal Freedom Hacker's Pac*, which consists of a "programmers toolkit" for special effects used in conjunction with two demonstration programs (one for a 64K CoCo and the other for a 512K CoCo 3).

In addition to the disk and documentation, you also receive a special cable that connects between the right joystick port and an amplifier. Amplifier, you ask? Yes, a small mini speaker/amplifier is required to run *Vocal Freedom*, along with any simple dynamic or electret microphone (like you'd find in a portable tape recorder). The amplifier and microphone are not included in the package, so you'll need to buy them separately. Both are available from Radio Shack. The amplifier (Cat. No. 277-1008), which costs \$11.95, is a battery-operated audio amplifier with a built-in speaker.

The microphone can be any one of many different kinds. Radio Shack also sells these, starting at \$18. As long as it will plug into the miniature phone jack on the speaker/amplifier, it will work. I recommend the Radio Shack 200-ohm dynamic microphone. It is inexpensive, but effective. If you are going to be getting serious with this product, naturally you are going to want a better amplifier and microphone. And if you have a CoCo 3 or a monitor driver on an older CoCo, you will be able to redirect the sound output to high-quality speakers instead of the TV or monitor speaker.

*Vocal Freedom* gives you many different options, which are presented in the form of a main menu. The program always returns to the main menu after it has completed a task for you. There are several allowances for using the CoCo 1 and 2 within the framework of

## What's Inside?

*Vocal Freedom* and *Hacker's Pac* are more than just run-of-the-mill programs for the CoCo 1, 2 and 3. They comprise a sophisticated software package that includes a digital voice recording program and a set of machine language programs to utilize the power behind the system. What is digital voice recording?

Imagine if you will that the computer sees your voice as electrical charges after it is input from an amplified microphone. These charges are sampled or read by the computer either 4,000 times per second in slow mode or more than 8,000 times per second on a high-speed CoCo 3. That's an awful lot of reading to remember! This process has a name — analog-to-digital conversion.

In this process, an actual number value, such as the number of millivolts in a frequency, is converted into a number that the computer understands, a number composed of ones and zeros — a binary number. When data is presented in binary format, the computer can make

sense of what it is seeing and hearing.

In order to reproduce what it has seen and heard in a human-understandable format, the computer must take all the numbers it has recorded and convert them back into the actual frequencies they represent, then send them to a speaker like the one in your monitor or TV set.

Dr. Preble suggests in his manual that you think of DVR as a series of snapshots the computer takes and arranges almost like a connect-the-dots picture. The more dots there are, the closer together, the more realistic the "vocal picture" will look when the computer recreates exactly what it has recorded.

This is the same principle at work with compact disc players. CD players sample a sound 40,000 times a second, though, which is 10 times faster than the average CoCo can, and which is why some CD players sound so realistic. They can play back a very accurate reproduction of the frequencies they have heard. □

this menu structure. One is an option that lets you use the CoCo 1 and 2 memory map. There is also an option that allows the use of the CoCo 3 extended memory map. Basically, the more memory you have, the more recording time you have.

Another option lets you use the high-speed or high-fidelity mode. This is not just a feature for CoCo 3 users, though, as one might expect; many of the older CoCos are capable of the high-speed mode. I tested an older CoCo 2, and it ran in high speed just fine. This feature makes the 6809 CPU chip run at twice normal speed. It is called "high-fidelity" because it allows the computer to sample input at a rate of 8,000 times a second instead of 4,000. This is an important feature, because it makes for a significant difference in quality on playback.

High-fidelity is a must for quality sound reproduction. While Dr. Preble notes in the manual that 4,000 ADC (analog-to-digital conversions) per second is adequate to recognize speech, anyone with the high-fidelity capability in the CoCo would very likely not want to use the low-speed mode. Remember that each sample uses a byte of memory, so memory will get eaten up twice as fast in high-speed mode. This still allows for

several contiguous minutes of speech in memory at a time.

Another important thing to remember, however, is that if you fill up 512K of memory with sound and want to save it, you have to have 512K of disk space to put it on! Either that or you must create small files using the CoCo 1 and 2 memory map option. For programmers who might want to include speech or sound in their programs, the 64K files would be a must.

Besides the regular playback mode, there are two other important features of *Vocal Freedom* you should know about. First is the voice-activated playback option. If you select this mode, CoCo will instantly play back anything stored in memory when it hears a noise in the room. (Note the opening lines of this review as an example of this exciting feature.)

The second important feature is the option that lets you set the sound recording level. This option allows users to set the level of their amplifiers for optimum sound recording accuracy. This is accomplished by the computer requesting that you speak into the microphone repeatedly and then adjust the volume control.

After six adjustments or more the computer will inform you that the

# The Amazing Dr. Preble and his Programs

Like so many other companies in the Color Computer Community, Dr. Preble's Programs has some fascinating and humble roots indeed. The CoCo Community has been supported largely by America's "cottage industry," which is best characterized by hobbyists with entrepreneurial designs inventing something on the dining room table in hot pursuit of what no one else has done before.

Before they know it, there is interest in their breakthrough. Then they create a little company, buy a little advertising in a trade journal, and pretty soon — a star is born. Apple's famous Steve Jobs is a prime example of this. So is Dr. Preble's Programs, and here is that story . . .

In 1969, there were very few computers around, and most of them filled up large rooms and were owned and operated by the military. Laurence Preble, then an aspiring hobbyist, built for himself a microcomputer from a kit sold by Southwest Tech.

The kit was a 6809-based computer with about 4K of memory, although it was soon upgraded to 24K. Its next upgrade was to 56K, and that is what it has right now — Dr. Preble is still using that computer, having it perform patient functions in his professional chiropractic office. It stores information on 8-inch Quime drives, also from a bygone era, and has a speech synthesizer attached to it.

Dr. Preble's Programs actually began in 1978 when he wrote a program in 6809 machine code and advertised it in the then fledgling *Computer Shopper* magazine. The program was called *Fast Sort*. Shortly thereafter, Dr. Preble became interested in speech synthesis and built his own hardware kit, programming speech phonemes (the actual elements of sound that go together to create speech) into the 6809 computer by hand. Two great and wonderful things occurred next. First, a company called Votrax developed a speech synthesis chip called the SC02, and second, Tandy invented the Color Computer.

Dr. Preble was a hardware hacker through-and-through and could not resist the temptation of this \$600-plus machine with its wonderful graphics and exciting sound capabilities. He immediately purchased one and began to work diligently with it. His next hurdle was in 1983 when he wanted to obtain a disk drive; it, too, was in the \$600-plus price range.

Instead, he determined to utilize the upper memory bank in his CoCo to work as a fast disk drive by storing programs there in a slightly compressed format. To that end, Dr. Preble wrote a program to utilize the unused areas of the CoCo's memory. The program was called *VDOS*, and it helped to boost Dr. Preble's Programs into the ranks of the dedicated

contributors to a rapidly growing CoCo Community.

A veteran RAINBOWfest exhibitor, Dr. Preble continued developing programs for the Color Computer from his well-spring of a truly unique background. One of Dr. Preble's CoCos is now utilizing *Vocal Freedom's* speech recognition capability and the program *Ears* from Speech Systems (along with a variety of other devices) to run his burglar alarm — and also to open doors, turn on lights and run the intercom system in his house!

As a chiropractor, Dr. Preble studied biofeedback. After completing some work with electrobiometers and galvanic skin response sensing, he took an eclectic approach toward curing patients who were suffering from back pain. He then wrote *Mental Freedom*, a fascinating video game program that reacts to a person's level of stress by using the computer to measure galvanic skin response.

In addition to his private practice as a chiropractor, Dr. Preble is a private pilot and uses his Tandy Model 100 computer for flight planning. He also has the distinct pleasure of having taught our beloved editor and publisher, Lonnie Falk, how to fly.

Dr. Preble said he is very committed to serving the CoCo Community in the months and years to come. He remains fascinated by the impressive and flexible Color Computer and is looking forward to developing ever newer and more innovative software for it. □

sound recording level is correctly set. This is important because if the recording level is set low, the computer will not hear you or will fade in and out and miss words. Conversely, if the volume is set too loud on the amplifier, you can overdrive the recording level and produce very distorted and garbled results. Careful attention to this feature is a necessity!

The documentation that accompanies *Vocal Freedom* is complete and easy to follow. It explains what the computer is doing to turn itself into a digital voice recorder in terms virtually anyone can understand. In fact, this sophisticated program could hardly be any easier to operate. The connections to the amplifier and microphone are very straightforward, and the main menu allows for simple operation. Very shortly after you turn it on for the first time, you will be using it like an expert.

## Hacker's Pac

*Hacker's Pac* is a software package you can purchase as a separate add-on

option to *Vocal Freedom*. It is written in machine language utilizing BASIC subroutines. The subroutines themselves are stored on the disk as separate files to make it easy to merge them into your own programs; they are designed to allow the user to load, save, change speed and memory location, and play DVR files created by *Vocal Freedom*.

*Hacker's Pac* is an excellent tool for extrapolating the uses of *Vocal Freedom* and pushing the product to its utmost capabilities. With this program and its built-in subroutines, recording after recording can be loaded from disk files and stored in memory or switched in and out of memory locations.

One of the best features of *Hacker's Pac* is that it is position code independent, which means that it can be placed anywhere in the computer's memory (as long as it does not interfere with something else already in memory). This is useful when you want to tuck the module out of the way and utilize every last bit of available RAM.

Although a little intimidating at first

for the novice programmer, *Hacker's Pac* comes with two demonstration programs by way of an online tutorial. It is extremely easy to use, allowing you to merge *Hacker's Pac* subroutines into programs you write. These demonstration programs really help you learn quickly how to incorporate DVR files into your own programs for spectacular voice and sound effects. If you write programs for commercial applications that utilize *Hacker's Pac*, you must contact Dr. Preble's Programs for a commercial software license agreement.

The documentation that accompanies *Hacker's Pac* is complete and accurate, although a little rigorous for the uninitiated programmer. I recommend the "grabbing the bull by the horns" approach in this case; once you begin to use (and enjoy!) *Hacker's Pac*, you will see how versatile and easy to use it is.

If you are going to purchase or have already bought *Vocal Freedom*, *Hacker's Pac* is a must if you plan to go beyond simple recording and playback.

into the sophisticated areas of memory bank switching, speed setting, multiple file loads and saves, etc. As a "programmers toolkit," this software is worth every penny and will stretch *Vocal Freedom* to the maximum.

#### Hear Ye, Hear Ye!

With *Vocal Freedom* you get an amazingly powerful package with few trouble spots. None of the problems I encountered were either substantial or show-stoppers — with one exception: The documentation does not specify filename format when the machine prompts you for loading or saving files.

The version I used worked when the filename was typed without quotes and without its .OVR extension, in most cases. However, unless I answered with a correct filename at this load or save prompt, the program would crash and have to be restarted. Also, there is no warning when you run out of disk space — you just get tossed back to the main screen with the fate of your file in limbo. Here also the documentation assumes that nothing will go wrong. If something *does* go wrong that you cannot handle on your own, you can call Dr. Preble's Programs for assistance. There is a 24-hour hotline.

*Vocal Freedom* and *Hacker's Pac*, while being a little expensive when you add in the cost of the amplifier and microphone, are well worth the investment. This is a real, working digital voice recording system that could have numerous applications from interactive education to entertainment to working with blind people who want to learn about computers. Its potential for special effects makes this an excellent value and an important volume in the CoCo software library.

*Vocal Freedom* is a full-featured and sophisticated program made even more powerful by its companion, *Hacker's Pac*. In spite of a few minor problems, the programs are really quite versatile and well-programmed. I can recommend this package to anyone without hesitation. If the idea of digital voice and sound recording intrigues you, *Vocal Freedom* could be the program you've been waiting for!

(Dr. Preble's Programs, 6540 Outer Loop, Louisville, KY 40228, 502-969-1818; *Vocal Freedom*, \$34.95; *Hacker's Pac*, \$14.95; add \$2.50 S/H)

— Jeffrey S. Parker

## Software

CoCo 1, 2 & 3

# BASIC Utility Diskette — Utilities for the BASIC Programmer

The *BASIC Utility Diskette* from T.E.M. of California is a collection of five programs to assist the software developer in writing and debugging BASIC programs. The disk also includes a compiled version of two of the programs to increase the processing speed for large files. The utilities require a CoCo 1, 2 or 3 with at least 64K, one disk drive and a printer.

The five utilities consist of the following programs: COMPARE.BAS, CROSSREF.BAS, DUMPCRT.BAS, DUMPDIR.BAS and DUMPFIL.BAS. Patches are provided for each of the programs, so you may customize them for your particular hardware. This allows you to bypass the initial questions about which CoCo you are using and how many drives you may have.

The first utility, COMPARE.BAS, comes with a compiled version, which is loaded by a BASIC program called COMP.BAS. Both perform a line-by-line comparison of two BASIC programs, which may be saved in either ASCII or binary format as long as both files are in the same format. The lines that differ will be output to the printer (you can elect to have the entire line printed or just the line numbers).

The compiled version requires that you leave the disk in the drive, because it loads program code as required. Single-drive users are required to copy the utility programs onto the same disk as the programs being compared. This utility makes it very simple to locate minor changes between program versions. The manual includes instructions for handling versions with line numbering offset by the RENUM command.

The CROSSREF.BAS utility can be used only on BASIC programs saved in binary format. This utility provides a numerical listing of all jump instructions (i.e., GOTO, GOSUB, etc.) in a program. It requires the use of temporary storage space on your disk; therefore, there must be space available and

no write-protect tab. The space is released upon normal completion of the program. Halting the program during execution will *not* release the disk space used: You must run the program again and allow it to complete normally to release the space. The output produced is a listing of line numbers called and from where they are called.

The DUMPCRT.BAS utility includes three versions. One is for standard 32-by-16 text displays, one is for 40-by-24, and the other is for 80-by-24. Of course, the last two are only for the CoCo 3. According to the instructions, the primary use of this program would be to print the screen display of the TRON (trace on) command. DUMPCRT may be executed directly from the keyboard or embedded within the program being traced using the TROFF (trace off) and RUN commands. Small sections of code may be traced and debugged in this manner. You must select the proper locations to embed the DUMPCRT command so your trace will not scroll off the screen before being printed.

The DUMPOIR.BAS program is mainly to assist in keeping track of the programs on your disks. It produces a printed listing of the files on a disk that may be trimmed to fit into a disk jacket for reference. The information includes a disk name and date, filename, extension, type, indication of binary or ASCII format, number of granules, number of sectors, and amount of free space remaining — a very handy program, indeed.

The last utility is DUMPFIL.BAS. This utility may be used with programs written in BASIC and saved in either ASCII or binary format, as well as with machine language programs. A printed copy of the disk file is produced in either decimal or hexadecimal form. The number of sectors in the file is determined, and you may dump any range of sectors. The listing contains 20 bytes per line and 256 bytes per sector.

Two of the demo programs provided on the disk are also useful utilities. One produces a sorted directory listing on the screen, and the other converts either a decimal or a hexadecimal number to binary.

All of the programs worked flawlessly and were accompanied by a 32-page manual. I tested several different BASIC programs and one machine language program as well as the demos provided. The CROSSREF program even found a syntax error (an extra quote mark) in something I had typed. Programmers who do much work in BASIC

would do well to include the *BASIC Utility Diskette* in their utility library.

(T.E.M. of California, Box 4311, Fullerton, CA 92634, 714-871-8210; \$19.95 plus \$2 S/H)

— Larry Birkenfeld

## Software

CoCo 3

### *Castle of Tharoggad* — To Slay an Evil Wizard

The good wizard who ruled the kingdom of Tharoggad has been abducted and imprisoned by his evil brother. You, the superhero of the land, must go into the castle and rescue him. But beware: There are traps to avoid and giant spiders, snakes, ghosts and bats that you must do battle with, using weapons found along the way.

*Castle of Tharoggad* is a maze Adventure game supplied on a ROM pack for the CoCo 3. The game has seven levels, and you start out on the ground floor carrying nothing but a backpack that contains a torch. You will need a joystick or mouse and either a TV or RGB monitor. The package includes an 11-page booklet that provides adequate instruction on game play.

*Castle of Tharoggad* is icon- and menu-driven. The lower half of the game screen consists of the icons, which represent your options. In the center of the collection of icons is a beating heart — yours. The speed with which the heart beats is determined by how much you exert yourself moving around and battling creatures. The slower the heart beats, the healthier you are and the more likely you will defeat the creatures. On the other hand, the faster it beats the more likely you will lose the battle.

Just above the heart is a compass you point and click to move around the maze. There is also a game save icon — this feature is a must! The game save consists of four codes of nine letters and numbers. Other icons include left and right hands, a backpack in which to store inventory, "grab" and "drop" icons, an "incant" icon, and "trap door" icons to reach the levels above and below.

To pick up an object, you point to either the left or right hand and then to

"grab." To pull something out of the backpack, you point to the backpack and then to a hand. To attack one of the verminous creatures that never leave you alone, you double-click on either the left or right hand icon. Castle inhabitants will also pick up objects — sometimes objects that you'll need later in the game. However, when you kill a creature it drops whatever it's carrying.

The graphics occupy the upper half of the screen — the maze with the creatures, weapons and traps. You'll see all this, that is, after you figure out how to make your torch work. The graphics, though animated, are not what you would expect from a CoCo 3 game. In fact, I have seen better graphics on CoCo 2 games. It's hard to feel heroic when you're slaying a blue spider that wears a silly grin on its face.

Also, the joystick response sometimes becomes very sluggish during battle, which can be frustrating. To be honest, the whole game is a little slow.

Until you collect a certain number of objects, which involves killing a number of creatures, you cannot find the doorway to the next level. At times the creatures would attack in twos or threes, regardless of whether I stayed still or moved around. Other times I could find no creatures, weapons or door to the next level for long periods of time.

I feel that if *Castle of Tharoggad* had better graphics and more action it would be more appealing. But if you're a video Adventurer who is persistent and does not mind if a game is a tad slow, *Castle of Tharoggad* could be a game for you.

(Tandy Corporation, Fort Worth, TX; \$29.95; Available in Radio Shack stores nationwide)

— Steve Griffith

512K & OS-9 Level II

## Software

### *OS-9 Level II BBS* — Put Your Own Board Online

One of the most entertaining aspects of the computer hobby is telecommunications. Many of us use our CoCos to communicate with Delphi and CompuServe as well as with friends both near and far. As you sit at the keyboard browsing through the myriad of databases on these systems, you might think it would be neat to operate such a system yourself, admittedly on a much-reduced scale.

There are programs in the Disk BASIC world that let you start and operate a BBS. *CaBBS* (THE RAINBOW, November 1985, Page 135) is one of them. Now those of us in the OS-9 realm have the same opportunities with the introduction of *OS-9 Level II BBS*.

*OS-9 Level II BBS* is not a single, large bulletin board program — in the spirit of OS-9, it is a set of utilities and commands used to create and run the board. In addition to the software, you will need an auto-answer modem and 512K of memory.

Rather than discuss all the components, I think the following will best illustrate the package:

Command	Function
tsmon	autobaud terminal monitor
login	user log-in
monitor	carrier-detect monitor
menu	menu manager
BBS.build	simple file creator
BBS.chat	chat with SysOp
Answer	answers request to talk with SysOp
BBS.create	creates message base
BBS.post	posts a message to the board
BBS.delete	deletes a message
BBS.pack	packs messages after deletion (conserves disk space)
BBS.read	reads messages
BBS.forward	reads forward beginning with a specified message number

BBS.new	reads all new messages since last access
BBS.scan	lists headers of all messages in the message base
BBS.search	keyword search of message
BBS.mail.post	posts mail
BBS.mail.check	checks to see if previously sent mail has been received
BBS.mail.read	reads mail
BBS.mail.readd	deletes mail
BBS.upload	provides capability to upload files to the BBS using either standard Xmodem, CRC Xmodem and Ymodem
BBS.download	provides the same transfer options to download files
BBS.conf	enters conference with another user
BBS.conf.who	informs user who is on the system

As you can see, all the basics of a bulletin board are present, including the standard functions for operating the usual message databases as well as three protocols for uploading and downloading files and programs. Not mentioned in this list are SysOp utilities and utilities for maintaining the download section of the board. The program provides a command that allows the SysOp to validate uploads and add a one-line description, a list of keywords and a paragraph description. This information is available to users wishing to download a file.

The OS-9 Level II BBS package also comes with the utilities TSMon, Login, Monitor and a menu program. TSMon is the time-share monitor, which is similar to TSMon provided by Tandy in its Development Package. This is an autobaud version in that it adjusts to the standard baud rates between 300 and 2400. Once TSMon opens communication, it runs Login and Monitor. Monitor simply monitors the carrier detect signal from the modem. When this signal is lost, Monitor kills all processes started by the user so that a new user

can log in. Login provides just what you would expect — it requests the user's ID and password and then validates the user and runs the menu program. This is the standard and usual way of running the board; however, the SysOp can choose to give a particular user access to the shell.

***"Installing the bulletin board is quite easy since an installation shell script comes with the package."***

The menu program is quite useful in its own right, providing a way to add new options to the BBS. Two files are read by the menu command. The first file is the menu itself. The second file is the command file, which is a list of single-letter options and the command

#### ★★★ NEW ★★★

##### BASH by Steve Bjork

Based on a popular arcade game which we can't mention (But sounds like 'Art Gannoyed'), BASH challenges you to clear the screen by "BASHING" your ball through multiple brick layers. Of course you'll have help getting through this 20 level game by activating options like, Slow Ball, Expanded Paddle, Multi-Ball and more!

**(SINCE 1985)**

to be executed for that option. The following should illustrate how Menu operates.

Menu File	Command File
L List files	L Dirdownloads
U Upload file	U Uploadx
D Download file	D Downloadx
M Main menu	M Chd /dd/BBS

All OS-9 commands and special characters are valid on the command lines of the file. The neat thing about the Menu command is that a change directory command will cause Menu to read the menu and command files in the new directory. This is accomplished by using the same filenames for these files in each directory, e.g., bbs.menu and

bbs.cmds. These files are text files and can be created by your favorite editor.

Installing the bulletin board is quite easy since an installation shell script comes with the package; this consists of two disks that contain the various programs and a complete BBS ready to run. In other words, all of the menu and command files have been set up. Install creates all the necessary directories and copies the menus and files. This is very useful for those with hard disks or floppy drives other than the standard single-sided 35-track drive, which the software comes on.

A very nice feature of *OS-9 Level II BBS* is an option in the TSMon command that allows you to run the BBS in a window for debugging. It's really neat to have the board running in

Window 1, *DynaStar* in Window 2 and utilities in Window 3 as you begin the process of customizing the board. In this way you can make changes and see the immediate result by flipping to the BBS window.

Although the primary purpose of the *OS-9 Level II BBS* is to run a bulletin board system, there are several other uses for the software. As I noted above, the board will run in a window — it could be set up as a family message center.

If you transfer public domain programs with others, you can eliminate the need for two people to have to set up terminal programs. Rather, set up the BBS — at least one person is free to go on and do other things with the CoCo. As you would expect for a multitasking system, you can perform other tasks while the BBS is running — even on a floppy system. *OS-9 Level II BBS* was tested on a floppy disk-based system and performed just fine. Obviously, a hard disk will greatly improve system performance.

The Menu program, which actually controls the BBS, is a very useful program in other ways. It can be used (especially on a hard disk) to better manage the use of the computer, i.e., make OS-9 more user-friendly by setting up menus and command files in each directory and letting Menu control the movement about the system.

Although I don't have the time to run and maintain a BBS, *OS-9 Level II BBS* is an excellent package for those who do. It is nicely done, especially with the operational BBS included. The ability to customize the BBS to your own liking is an added feature. And the additional use of some of the utilities beyond the BBS make this package especially attractive.

One precaution independent of the software is to make sure that the cable between computer and modem carries the DTR and carrier-detect lines. These lines are necessary and are sometimes not connected in some cables (I learned about this the hard way!).

The NX-1000 gives you plenty of print options for attractive printing. Four typefaces. Four pitch sizes, in standard and italics for a total of 32 NLQ modes. The NX-1000 Rainbow gives you all these features plus online access to 7 color printing and graphics. Black, blue, red, yellow, green, violet, and orange. Both models have a 1 year warranty, nationwide service and a 30 day online trial.

**NX-1000 SPECS:** 144 cps Draft, 36 cps NLQ (18 x 23 dot matrix), 4 NLQ Fonts, Italics, Sub & Superscripts, Emphasized, Doublespace, Proportional, Condensed, International, Downloadable, Quad 1/2, Double Tall, Underline, 9 Pitchs, Forward and Reverse n/216 Line Feeds, Absolute or Relative Vert. & Horz. Tabs, Left, Center or Right Justification, 8 Graphics Modes to 1920 dpi, Macro Instruction, Bidirectional, Adjustable Tractor Feed, 200, Printable Characters, Semi Auto Sheet Feed, Front Panel Soft Touch Control, Epson and IBM Emulate, 4k Data Buffer, Hex Dump, Rainbow: Same plus color.

## ***DELPHI: The Official Guide — Off-Line Help for Online Operations***

Like the intrepid native guides that lead expeditions up the Amazon, *DELPHI: The Official Guide* will lead you through the vast jungle of information offered on the Delphi computer information network. If you, like me, find the service easy to use, but the quantity of information offered bewildering, then this book is for you.

Even though Delphi has a very complete online help library, the ultimate help utility is this book. Written with the new user in mind, *The Guide* will be of benefit to most Delphi subscribers — especially when trying something for the first time.

*"The reader is guided through virtually every menu the service offers and is provided detailed explanations of what each choice from every menu will yield."*

The book begins with a section called "Getting Started." In simple language, using a minimum of jargon, the section gives you instructions on how to set up your terminal software to communicate with Delphi, how to sign up on Delphi, and how to tell either Tymnet, Telenet or Datapac that you want to be connected to Delphi. From there you go into a discussion of important commands and how to answer questions in a way that the service understands.

The next few chapters are filled with descriptions of services and options available. Did you know that Delphi has a mortgage calculator online? That's just one of the services you can find out about in the book. I doubt most users would ever discover all the neat things on Delphi by themselves. With *The Guide*, it's all laid out in black-and-white for you to study off-line.

The reader is guided through virtually every menu the service offers and is provided detailed explanations of what each choice from every menu will yield. This alone justifies the price of the

book. I have spent a great deal of time online searching through the various menus, looking for a particular service I'd seen somewhere but was unable to find again. Now I just look it up in *The Guide*'s index, and there I am — without having to press CTRL-Z even once.

The chapter covering online Workspace proved to be the most helpful to me. Workspace is a versatile feature with a very cryptic way of operating (at least to me). After reading *The Guide* I still find the Workspace to be cryptic, but now I can get around in it and do some tricks I had not even suspected were possible. *The Guide* gives concise instructions and clear examples on how to do most anything you can think of with the files in your Workspace.

*The Guide* contains more than 480

pages with almost 100 pages of references, indexes and appendices. There is also a three-page, front-and-back pull-out that lists all the commands and menu options.

*DELPHI: The Official Guide* seems to be as complete a reference as you will ever need. If you use Delphi often, *The Guide* will eventually pay for itself — you'll save on the connect fee usually spent reading through help screens. You can look up any information you need — off-line. Besides, reading *DELPHI: The Official Guide* will give you something to do while waiting for the evening hours when you can afford to get online.

## Video Draw Poker — Five-Card Simulation

According to its author, *Video Draw Poker* was developed to simulate the video poker machines found in casinos. (Depending on where you live, they may also be found in local clubs and bars.)

Usually for a minimum of a quarter, the machine deals you five cards. After the deal you may replace some or all of the cards. If your new poker hand then meets the requirements for one of the payoffs, you are either paid off or credited with additional plays.

Unlike real slot machines, winning and losing is not totally a random event — your choice of which cards you keep and which you discard does affect your likelihood of winning. (Unfortunately, however, even if you make the best possible move, the odds, like the odds on slot machines, are still stacked against you.)

*Video Draw Poker* works on two levels — you can play the game for nothing and, perhaps more importantly, you can test various playing strategies.

The simulation comes on tape or disk and requires a minimum of 32K. I tested the disk version. From a simple menu, your choices are playing, testing or quitting. If you choose to play, you will be asked how much money you want to start with. Once you are staked, you can bet from \$1 to \$5 on a hand as long as you have money.

Once you have made your bet, five cards are dealt. (The graphics are relatively simple — the purpose of this simple program is not to dazzle your friends.) You then choose your discards and the computer replaces them. If your hand meets a payoff level, your winnings are added to your stake. Play continues until you either run out of money, quit or decide to test a playing strategy.

I found the strategy-testing part of this simulation to be its most interesting and valuable feature. The program allows you to set up a hand — you decide which five cards you initially receive, which you will discard, what your initial stake is and how much each hand is worth.

When the simulation is set up, the computer will then randomly play this

same hand as many times as you want it to — all the while keeping a running total of your stake. For example, suppose that you are dealt a four, five, seven, eight (each of different suits) and an ace of diamonds. Do you throw away the ace and hope to draw a six (completing your "inside straight") or do you discard everything but the ace, figuring that drawing four cards will give you more possible ways of winning?

*"What should I do if three of the cards, including the ace, are diamonds? If four of them are diamonds? With this simulation, I can find the best strategy."*

Figuring the odds of drawing the straight are fairly easy — there are four sixes in the remaining 47 cards. Therefore, I have four chances in 47 of drawing a straight that will give me back \$4 for my dollar wagered. (Note that a six is the only card that will win for me.)

The second possibility is not as easy to figure. With four cards, I could match my ace, pair other cards, get a straight, flush, full house, or even a royal flush. The possibilities are measurable but not nearly as easy to figure.

Which is the better play? I could consult my old statistics textbook or I could allow the computer to play each hand perhaps 5,000 times. The answer would most likely be the same. The beauty of this simulation is that it allows us to check various strategies. What should I do if three of the cards, including the ace, are diamonds? If four of them are diamonds? With this simulation, I can find the best strategy.

In his easy-to-understand documentation, the author lists four uses for his program: fun, testing strategies, practice, and deciding "if you want to do real gambling on this type of machine." Interestingly, the conclusion for the final use comes after you've done the other three. The program is fun, and it allows you to practice all kinds of strategies. But it still wins even when you use the best of strategies. If you are interested in video poker, you should check into this program.

(Prometheus Software, P.O. Box 15859, Long Beach, CA 90815; \$17)

— John Matviko

## V-Term — CoCo 3 Terminal Emulation

Whether you are going online for the first time or just looking for a terminal program that is a little more versatile than the one you are presently using, I don't think your search will be over until you have purchased a copy of *V-Term*. This is probably one of the most versatile and full-featured terminal emulators I have seen for the CoCo 3.

One of the first things I noticed upon opening the package was the well-written and professional-looking manual, which contains 56 pages of information that will have you online in no time. It even includes a section called "An Introduction to Data Communications," which should help even the novice to understand exactly how modems and terminal programs work together to allow communication with other systems.

I feel I should mention the quality of the manual because, in my opinion, even the best program is worthless if it is not supported by the proper documentation. Believe me, *V-Term's* manual leaves few questions unanswered.

Another thing I am happy to report is that *V-Term* is supplied on an unprotected disk, so you can make a backup.

When I loaded *V-Term*, it auto-executed and I was greeted with the start-up screen. It was a 28-line screen of which the bottom three lines were reserved for the onscreen menu. Using the ALT and arrow keys I was able to select from the menu options, which usually presented me with a submenu.

The first choice I made was to select the option Parameter from the main menu. From here I was able to change the RS-232 rate, the transfer protocol I wanted for uploading/downloading files, printer settings, and even screen color. I was able to save these and other options to disk — every time I boot *V-Term* it's configured exactly the way I like it. Still not impressed?

Another option from the Parameter menu is Terminal, which allows you to choose from the four types of terminals *V-Term* can emulate: VT-100, VT-52, Vidtex and CRT. If you subscribe to CompuServe, something you may find of special interest is that *V-Term's*

## BASICally Speaking

If you are working on a BASIC program that has you stumped, write in to Bill for a fix. He can help solve your programming problems.

### Merging Subroutines

Dear Bill:

I've been computing for only about seven months, and this month I finally upgraded to a disk system. I've written several programs that use the same subroutine. Up until now when I wanted to start a new program, I deleted all the lines from the previous program except those of the subroutine I want to re-use. What do I do, short of re-entering those lines, if I've already started a program and decide I'd like my old subroutine added? Any help you can offer will be greatly appreciated.

Todd Barkley  
Orange, CT

That particular question was one I asked a few years ago myself. I've since gotten some extended use out of the procedure I'm about to explain. It's called MERGE, and it is really quite handy.

There are only a few things you have to remember when using the MERGE command. First, the program or portion of a program you'd like to add to the main program must first be saved in ASCII format. To do this, simply isolate your routine, deleting all line numbers you won't be using. What's left we'll call SUBX (SUBroutine X). We'll call the main program MAIN; it will be numbered starting with Line 10 and continuing through Line 300.

Personally, I like to renumber my subroutines before I save and merge them, but you don't have to. However, just humor me for now and do it this way. Later on, when you become familiar with the procedure, you can take all sorts of liberties.

All right, so now you have SUBX and nothing else in memory. Type RENUM 1000,10,10 and press ENTER. To see the results, type LIST. You'll notice that SUBX now starts at Line 1000 and continues listing in increments of 10. You can renumber starting with any number you like, as long as it's higher

Bill Bernico, RAINBOW's newest columnist, is the author of more than 300 Color Computer programs. He founded Bill Bernico Software in 1987 and enjoys writing and recording his own music.

## BASICally

### Speaking

By Bill Bernico  
Rainbow Contributing Editor

than the last line number of the program to which you want to merge it — at least for this example. Now that you have your renumbered SUBX in memory, save it in ASCII by typing SAVE "SUBX", A and pressing ENTER. Now if you type DIR and press ENTER, you'll see that your subroutine is saved on disk. Make sure that this ASCII-saved subroutine and the main program are both on the same disk.

Once both of these files are on the disk, type LOAD "MAIN" and press ENTER. At this point MAIN is now in memory and SUBX is only on the disk. Once you've loaded MAIN, type MERGE "SUBX" and press ENTER once again. You'll hear the disk drive churning. When it stops and the OK prompt appears, your two files will be merged into one. To make sure, type LIST, press ENTER and you'll see the program scroll by. You can halt the scrolling any time by pressing SHIFT and @ simultaneously.

You'll notice, as MAIN scrolls by, that when it gets to Line 300, the next line is 1000. This is where SUBX picks up. Now you're free to continue adding more lines to the main program between lines 300 and 1000. When you need to access your subroutine, add a line that says GOSUB 1000.

Now the two merged files are in memory, but you'll have to re-save them to disk again. Call the product of the merger MERGPROG, for example, type SAVE "MERGPROG" and press ENTER.

That's about all there is to it. It'll save you a lot of extra typing and time.

### DATA Dilemma

Dear Bill:

How does one understand and write DATA statements as part of a BASIC, pseudo machine language, program? I can understand the basic concept of a line like

READ A:FDR I=&Hxxxx to &Hxxxx  
:POKE I,A:NEXT I

but from there on, my comprehension fails me. What are the numbers in the DATA statements? What do they stand for, and most of all, how do we (the programmers) know where to get them and how to put them in the proper order?

I would really appreciate being enlightened because some programs are written entirely in DATA statements. Thanks for your help.

Bernice Shoobs  
Clifton, NJ

It's funny that you'd ask me this question, Bernice. I wondered about it myself for a long time and finally asked someone more familiar with the procedure than myself about it.

I learned that the program is first written in assembly language using an editor/assembler. When the process is complete, you have a binary file. Since, on a scale of one to 100, my knowledge of ML programming is about .00001, I can't help you with the procedure of assembling the code.

However, from what I understand, once you have that binary file, you can convert it to BASIC by using a short program that changes the binary code to DATA statements. Kevin Davidson's utility, MacData, [RAINBOW, "The Demystification of ML On Disk," December '83, Page 181] would accomplish this task. I've tried the program and have converted several binary files to BASIC programs. These programs go a little slowly, but they work fine.

### From Text to Graphics

Dear Bill:

I'd like to convert some of my favorite BASIC text programs to the graphics screen. Without doing a lot of guessing, is there a way to figure out where to draw so that the text will appear in about the same position on the graphics

# Received and Certified

The following products have recently been received by THE RAINBOW, examined by our magazine staff and issued the Rainbow Seal of Certification, your assurance that we have seen the product and have ascertained that it is what it purports to be.

**F** **The Answer**, a program that allows you to communicate with your "inner self" via subliminal messages. For the CoCo 3, Alpha-Bionics, Inc., P.O. Box 2203, Richardson, TX 75275, (317) 962-6644; \$29.95.

**F** **Armchair Admiral**, a Battleship-type game for up to eight players that places you at the helm of four ships - a ship, caravel, brigantine and galleon. "Your orders are to stay afloat while trying to sink your enemy, who is in command of identical ships." For the CoCo 3, Eternaut, P.O. Box 3354, Arlington, VA 22223, (206) 633-5263; \$14.95 plus \$2 S/H.

**F** **Bash!**, a one- or two-player machine language arcade game, similar to Breakout, that has players ping-ponging and blasting away "bricks" (the scenario involves construction). There are 20 screens of debris that must be cleared away. If you catch the special falling bricks, you will be rewarded with points. For the CoCo 3 and disk drive. Program written by SRB Software but available exclusively through Game Point Software. Game Point Software, P.O. Box 6907, Burbank, CA 91510, (818) 566-3571; \$24.95 plus \$3 S/H introductory offer, regularly \$29.95 plus \$3 S/H (disk only, \$4.95).

**D** **Deluxe Icon Editor**, an AIF icon editor running under OS-9 Level II in the Multi-Plus environment on 512K CoCo 3s. Documentation is included on the disk. A mouse and a high resolution interface are recommended, but not required. Requires 512K CoCo 3, OS-9 Level II and Multi-Plus. Puritan Springs Software, Ameritron Building, 17140 Lorain Ave., Chichester, OH 44411, (216) 251-8085; \$10.95.

**Horse Sense**, a horse race handicapping program that breaks the race down into three sections - call, second call and wire. The speed of the horses is computed in feet second for each of these sections. For the CoCo 1, 2 and 3. Wintron Hills Software, 6133 Channing Ave., Cincinnati, OH 45211, (513) 662-3233; \$24.95.

**KJV on Disk: Mark**, the Bible's book of Mark on disk in ASCII files for importation into a CoCo 1, 2 or 3 word processor. BDS Software, P.O. Box 485, Glenview, IL 60025, (312) 998-1656; \$3.

**F** **MacPlay**, a program that allows you to play Macintosh digitized sound files, which can be downloaded from CompuServe or Delphi. For the CoCo 3, CoCo Tech, Inc., 208 Candy Ami Drive, Reading, PA 19606, (215) 779-7768; \$19.95.

**F** **Mine Rescue**, an action ML game for one or two players. Your mission is to rescue trapped miners if the air is rapidly running out. You can pick up extra points on the way by gathering gold and gems while avoiding falling rocks and the banshee. Carrying tanks of fresh air, you will climb rocks and ladders and leap pitfalls.

The game was written by SRB Software but is available solely through Game Point. Requires CoCo 3, disk drive, joystick and color/RGB monitor. Game Point Software, P.O. Box 6907, Burbank, CA 91510, (818) 566-3571; \$24.95 plus \$3 S/H introductory offer, regularly \$29.95 plus \$3 S/H (disk only, \$4.95).

**R.S.B.**, an adaptation of Disk Extended Color BASIC for OS-9 Level II. The command syntax is identical, and BASICA programs may be run in several windows simultaneously. Commands are accepted in both uppercase and lowercase, and all I/O uses OS-9 system calls. For the CoCo 3 and OS-9 Level II; compatible with Multi-Plus. Burke & Burke, P.O. Box 1283, Palatine, IL 60078, (312) 397-2898; \$39.95.

**Scenery Disk #7**, a scenery disk for Flight Simulator II that covers the eastern seaboard from Washington D.C. down to Miami. It includes the major airports, radio-nav aids, cities, highways, rivers and lakes. A map is provided. For the CoCo 3, requires Flight Simulator II, mLOGIC Corporation, Champaign, IL; available through mLOGIC's order line: (800) 637-4983; \$24.95.

**F** **Security Projects** for the TRS-80 Color Computer, a book of hardware projects including a "vacation light," a temperature alarm, a sound-activated alarm and an intrusion alarm. Brown's Enterprise, 119 Skyline Drive, RR, Granbury, TX 76048, (817) 573-0137; \$7.50.

**Tax Estimator**, a tax program placed in the public domain, that helps users estimate their federal income tax liability in preparation of forms 1040, 2106 and 2441. It may be obtained for a \$5 shipping and handling fee. For the CoCo 1, 2 and 3, Try-O-Bye, 1008 Alton Circle, Florence, SC 29501, (803) 662-9500; \$5.

**TypeMate**, a menu-driven typing tutor that draws the

CoCo keyboard onscreen; whenever a key is pressed, the screen's keyboard echoes it. The program instructs beginners in correct finger placement, charts a course of study, and provides typing exercises and the capability for users to create their own lessons. Requires a CoCo 1 with 32K, a CoCo 2 with 64K or a CoCo 3. Supports cassette recorders and a printer. Tandy Corporation, 1700 One Tandy Center, Fort Worth, TX; Available in RadioShack stores nationwide.

**F** **Warp Fighter 3-D**, a one-player, joystick-controlled 3-D space fighter simulation in which you must shoot down the Akira enemy from 25 sectors of space. To move quickly from one sector to another, your ship is equipped with the Federation's new warp drive. 3-D glasses are supplied (for \$2.95). For the CoCo 3 and disk drive. Program written by SRB but available exclusively through Game Point Software. Game Point Software, P.O. Box 6907, Burbank, CA 91510, (818) 566-3571; \$24.95 plus \$3 S/H introductory offer, regularly \$29.95 plus \$3 S/H (disk only - without 3-D glasses-\$4.95).

**Western European Tour Scenery Disk**, a scenery disk for Flight Simulator II that covers southern West Germany, northern France and southern United Kingdom. It includes the major airports, cities, highways, rivers and lakes, and includes a map. For the CoCo 3 and Flight Simulator II, mLOGIC Corporation, Champaign, IL; available through mLOGIC's order line: (800) 637-4983; \$24.95.

**ZoomDump**, an update to the PMODE 3 or 4 graphics screen dump for the DMP-105 and DMP-106. New features include horizontal paper positioning and the ability to print any rectangular section of the screen, along with upright or sideways images. For the CoCo 1, 2 and 3, Curtis Enterprises, 2301-C Central Drive, Suite 684, Bedford, TX 76021, (817) 283-8571; \$14.

**F** First product received from this company

The *Seal of Certification* program is open to all manufacturers of products for the Tandy Color Computer, regardless of whether they advertise in THE RAINBOW.

By awarding a *Seal*, the magazine certifies the product does exist — that we have examined it and have a sample copy — but this *does not* constitute any guarantee of satisfaction. As soon as possible, these hardware or software items will be forwarded to THE RAINBOW reviewers for evaluation.

— Lauren Willoughby

have edited at least one module. When you create a bootable disk for the first time using *OS9Gen* or *Config*, you are combining a number of modules into a program called *OS9Boot*. While *Config* is perfectly capable of creating *OS9Boot*, it is time-consuming at best.

*EZGen* comes into play when you want to alter, add to or delete from an existing program that consists of a set of modules. Using only the programs available with OS-9, these tasks are quite tedious. For example, when I bring my system to school with me I use a single drive instead of the two drives I use at home. I have been putting off deleting the *d1* device descriptor module in the *OS9Boot* program for my school disk because it would take too long to generate a new *OS9Boot* using *Config*.

As a working test of *EZGen*, I removed *d1* from *OS9Boot* in about 10 minutes, which included reading the manual. Patching the existing device descriptor for a 12-millisecond step rate was also a quick and painless job. Finally, I added the two RAM disk modules to *OS9Boot*. All of this was done with *EZGen* alone.

*EZGen* has several other capabilities that some people may find handy. It allows you to rename a module, patch a module using either Burke & Burke's Patch format or the Disk BASIC binary format, save a module to disk, extend a module and add a module header.

The last two abilities are quite interesting and powerful for the hard-core types like me who like to do things in unusual ways. For example, using a file transfer program I can move a machine language program from the Disk BASIC environment into OS-9. Then, using *EZGen*, I can add a module header so that the program can be loaded by OS-9. Once it's loaded, I can use one of the powerful OS-9 disassemblers on the program. Being able to extend a module easily can allow you to add a small subroutine to an existing module without having to disassemble the whole thing first. I did that once and it was very tricky. With *EZGen* it could be a snap.

There are a few things I wish *EZGen* could do, or at least could do better. First is an ability to locate modules and data blocks within programs. You must know the names of the modules you'll be working on in order to tell *EZGen* which module name to find. This problem isn't insurmountable; you can get module names with *Ident* before you start (or by forking a shell from within

*EZGen*), but it would be easier if there were some way to call a list of module names from within *EZGen*.

Another wish is related to a problem I had with user mistakes. Any user mistake causes *EZGen* to quit and return to OS-9 unless the command is preceded by a hyphen. I have a nasty habit of pressing ENTER a couple of times when I'm working in this type of program just to be sure it's awake and operating. Every time I do this, *EZGen* quits and I have to start it again. This isn't a flaw or a bug, just a way of doing things that takes time to get used to.

Another problem I had was with disk space. Because *EZGen* has to create at least one copy of the module you are editing, you need sufficient disk space to use it. I suggest that any program with *EZGen*'s power should be used on a backup. And because of the disk space problem, I recommend placing the backup on a nearly empty disk — especially if the module you are working on is large.

I also have some problems with the manual. The style is that of standard UNIX "man" entries. This is OK for experienced users who know exactly what they want to do, but it can be intimidating to new or occasional users who aren't familiar with the terse style. The manual could also use more examples and a better explanation of what *EZGen* can be used for. With some experimentation, most OS-9 programmers who have a use for *EZGen* will be able to figure it out, so I guess the manual isn't a big handicap. I just

think that it could be expanded some.

Included with *EZGen* are two other programs that work as a team or individually for very specific tasks. *TagTrack* corrupts the OS-9 file system in a controlled way that lets you determine which files reside at least in part on a particular track. Using *TagTrack* you can locate, edit or delete the OS-9 kernel, or you can find the files that need to be deleted to clear a particular track for some reason (creating a disk readable by OS-9 as well as Disk BASIC, for example).

*Zap* can undo the corruption caused by *TagTrack*. It does this by releasing the directory entry and file descriptor sector for a file without releasing the sectors in use. It can be used to make a sector or group of sectors unusable by OS-9. These things can be done using a patch program or disk editor, but they are very tedious that way. Burke & Burke has given us a way to perform several difficult tasks quickly and easily.

If you've ever done any of the jobs that *EZGen* can do, you already know how much you need this package. If you don't see a reason why anyone would want to do what I described, then maybe you should wait until you need it. Just remember to get *EZGen* before you start — it'll save you an awful lot of work.

(Burke & Burke, P.O. Box 1283, Palatine, IL 60078, 312-397-2898; \$19.95 plus \$1.50 S/H)

— Donald McGarry

## Corrections

**"Received and Certified" (October 1988, Page 130):** The *Hard Bodies* program was incorrectly listed as the first review product from Baron Products for review in THE RAINBOW. An earlier Baron Products program, *Track Events*, was reviewed in the February 1986 issue (Page 200).

**"Quick Fixes" (October 1988, Page 58):** An IC pin is incorrectly labelled in the schematic shown in Figure 2 (Page 62) of the article. On the right-hand side of the figure, the designation IC4 Pin 3 should be changed to IC4 Pin 5.

For quicker reference, Corrections will be posted on Delphi as soon as they are available in the Info on Rainbow topic area of the database. Just type DATA at the CoCo SIG> prompt and INFO at the TOPIC> prompt.

Your OS-9 programs can then be called up with a single keystroke. It can also change the data and execution directories of any OS-9 operating system.

With my 512K CoCo 3, I was capable of building the required "menu options" file quickly and easily. Building the required batch files that are to be executed in accordance with my selection was a piece of cake. Now the menus presented reflect the types of OS-9 files my hard drive contains. I press one key from the menu calling up BASIC09, and within seconds it pops up on my 80-column screen. Impressive.

I wondered how fast it would be to get a file buried within my hard drive. So I exited BASIC09, and *Hard Disk Organizer* automatically returned to my screen. It sorted through a huge pathlist that I normally type in by hand, and all I did was press one key. It operated quickly and flawlessly.

The program is compiled in C language for speed and portability. It fully supports OS-9 windows and remote terminal users. Many different terminal configurations are supported, including ANSI, ATS and Z19.

The disk is not copy-protected, so you are capable of making a backup

copy for safekeeping. The documentation is well-written and takes you step-by-step through a lot of examples, so you can get your system up quickly and to your liking.

The documentation states that the software can be used successfully on a CoCo 2 in addition to a CoCo 3, with Level I and II OS-9 systems. No memory requirements are mentioned in the documentation. I found that the software operated flawlessly on my 512K CoCo 3 but would not operate on a 128K CoCo 3 because of insufficient memory.

I ran into the same memory problem when trying the CoCo 2 version on my 64K CoCo 2. It would not operate completely due to the procedure of "forking." (To fork a process means to create a process as a branch of another process — a subroutine.) It could not fork large application programs on the lower-memory machines, due to the available free memory. But, to be fair, the author does mention that he is developing a procedure to "chain" to the application program instead of fork.

Considering all that this software does, I feel it is reasonably priced and well worth the money for 512K users.

You do not need to be an OS-9 expert, and in fact I feel this software will benefit those who are beginners, especially because new OS-9 users often have a hard time getting used to typing long pathlists.

(Robert A. Hengstebeck, 408 Grandview Ave., Feasterville, PA 19047, 215-322-5455; \$24.95)

— Brian R. Smith

## EZGen — OS-9 Module Editor

*EZGen* from Burke & Burke is the kind of product that most OS-9 users will probably not need to use often — but when you need it, you really need it. As its name implies, *EZGen* is a module editor for the OS-9 Level I or II operating environments.

My initial reaction to the product was one of minor confusion. After all, why would anyone want to edit a module? It turns out that almost all OS-9 users

will destroy you and your ship. You get three misses before the game is over.

Frequently you will see the message "Press the Space Bar" displayed in the window. This is a warning that an alien vessel is about to materialize in front of your ship, and you must deploy your defense shields for protection. This is where I had trouble with the program.

As your ability to destroy the attacking meteors improves, you will move to the next level of difficulty. One such level concentrates on the "second" row of keyboard keys, or the one just above the home row. The different levels are intended to drill the user by requiring all of the keyboard keys to be depressed in various random character sequences. As levels are increased and progress is made, the user becomes a keyboard commander and earns a certificate available from the author.

Like most skills, typing requires a lot of practice. *Keyboard Commander* can provide some of the necessary practice in a manner that children will enjoy. The program provides the beginning typist with a clever, challenging way to learn the location of the various keys on the CoCo keyboard. Programs that use a "game" approach have proven to be effective learning tools. *Keyboard Commander* is such a program.

*Keyboard Commander* is supplied on a non-protected disk. The program utilizes artifact PMODE4 colors, and it looks best on a color composite monitor or a TV set. (If you use an RGB monitor with your CoCo 3, you will not be able to see the beautiful colors this program has to offer.)

(E.Z. Friendly Software, 118 Corties Ave., Poughkeepsie, NY 12601, 914-485-8150; \$24.95 plus \$1.50 S/H)

— Jerry Semones

CoCo 1, 2 & 3

Visit the Adventurer's Guild to create your team, collect them at the Unicorn Tavern, then go on over to Elmo's Trading Post for equipment. Choose well, for in the vast dungeons below there are many monsters intent on destroying your team. Your characters may be human, dwarf, gnome or elf and function as paladin, fighter, thief, priest or wizard. CoCoists with a printer will be able to make a hard copy of both the roster and individual inventories. The latter come in very handy as the game progresses. I made an accordion-fold booklet that I consulted at every encounter and updated while in "camp."

*"The dungeons abound with secret passages, treasures, tricks, hazards and monsters. The deeper you go, the greater the hazards and the better the rewards."*

The game is easy to play — just press a key. In the dungeons, the screen is divided into two parts. To the right is a list of the characters and a move menu. To the left is a view of the dungeon, in perspective, as you see it looking forward two squares. Mapping is a bit tricky at first. Careful study will soon make it clear. If you really get lost, you can have your wizard use the "map" spell. You won't see a diagram, just coordinates of your location relative to the Bronze Door (entrance). I found this was adequate.

Camp is available any time there is no attack in progress. It is a place to view inventory, make changes, use spells (heal) or sleep (save). Each level of advancement adds a new spell; some protect or heal the Adventurers and others aid in defeating monsters. For proper updating of the disk, the Adventurers should retire to the Green Dragon Inn; however, camp may be more convenient at times.

The dungeons abound with secret passages, treasures, tricks, hazards and monsters. The deeper you go, the greater the hazards and the better the rewards. (Dungeon 6 is a zinger! Teleporting from Dungeon 5 to 7 would have real appeal.)

There are other places aboveground that are of interest: The Temple of Ymro offers healing and advancement, and the library may hold some clues.

The documentation is very good. The author offers full technical support (but no clues!). Send a stamped, self-addressed envelope (SASE) for a reply to your questions. I used both CoCo 1 and CoCo 2 with no problems. The manual is very useful. The choices and spells are fully explained, so a novice can play the game as well as the more advanced.

This is a game more for Dungeons & Dragons fans than Adventure addicts. The action and the objects are average, but the dungeons (mazes) are excellent. *Spellbound* is written in BASIC, which makes for a brief delay when leaving camp. There is nothing wrong; in a short time, the screen clears and the game continues.

The biggest drawback is the lack of sound — no beeps to warn of attack or danger. The author is planning to remedy this. Some messages disappear too fast; however, the important ones wait for a key press.

There is enough room on the disk for 12 characters, which can be used six at a time. The extra characters should be developed for future use. Several backups are recommended for emergencies. It will take many hours, maybe months, to be ready for a confrontation with the Archwizard. I am neither a novice nor an expert (though I am good at mapping), and I enjoyed playing the game. *Spellbound* requires 32K, one disk drive and a CoCo 1, 2 or 3.

(Thor Software, Suite 162, 9431 Westport Road, Louisville, KY 40241, 502-588-5969; \$16.95: First product review for this company appearing in THE RAINBOW.)

— Audrey De Lisle

CoCo 3, OS-9

## Software

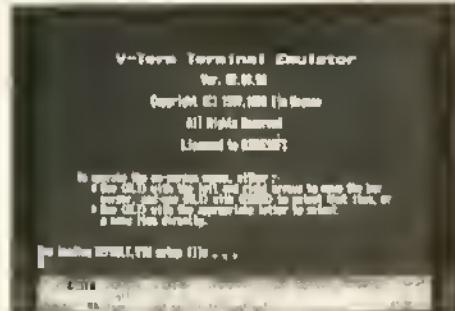

### Hard Disk Organizer — Type Around Long Pathlists

Don't let its name fool you — the *Hard Disk Organizer* will organize your OS-9 floppies, too.

In a hard drive system, the CMDS directory will invariably become unmanageable due to the number of executable programs found there. *Hard Disk Organizer* allows a user to develop menu-driven pathlists so that any application program can easily be accessed.

Down in the lowest dungeon waits the Archwizard! Can your hardy band of Adventurers overcome monsters, avoid hazards and gain enough strength to defeat him? Can you guess his name and banish him forever? It will take many hours to find out in this Dungeons & Dragons-type text Adventure.

Vidtex emulation not only supports wide character display, but also medium and high resolution RLE graphics.

I was able to decide exactly how I wanted my screen to appear, including border color, background and foreground color of both the main screen and the menu display by cycling through the 64 possible colors available for each. If you spend a lot of time in front of your monitor as I do, I think you will find this very useful in finding a combination that is easy on the eyes.

Going from one BBS to another and searching for some of the excellent public domain programs that are out there is one of my favorite pastimes. If you've ever downloaded a file from a BBS I'm sure you know how annoying it can be having to stop, save the file to disk and then clear the buffer before you can either download or upload another file. *V-Term* can save you some time. *V-Term* uses a RAM disk type buffer that allows you to have several different files in the buffer at the same time.

You are limited only by the amount of buffer memory available, which in a 512K CoCo leaves about 456K available for buffer storage. A 128K CoCo would have a 72K buffer. This buffer could save you a lot of time and money if you do much in the way of long-distance file transfers. *V-Term* also

gives you the option of saving your files to disk instead of memory. While I am on the subject of file transfers, I think I should point out that *V-Term* gives you the options of using either line-oriented ASCII, Xmodem, Xmodem CRC or Ymodem transfer protocols.

*V-Term* will work with just about any hardware configuration. This includes the back-panel serial port (up to 2400 baud), the DCModem pack, and even deluxe RS-232 packs that have been altered to be addressed at \$FF6C to \$FF6F. Not to mention 35-, 40- or even 80-track drives (providing the DOS you are using supports 40 or 80 tracks — but not *JDOS*). This should be a welcome feature to those of you using the popular *ADOS-3*.

I must admit the program lacks one feature — the ability to write to the buffer. I did not consider this to be a major problem, though, because it is possible to write to the buffer using the VT-100 mode and *V-Term*'s "snapshot" feature, which copies the current screen to the buffer. The author told me that he plans to include this option in future versions of *V-Term*. I was also told that anyone currently using Version 1.0 can upgrade to Version 2.0 for just \$7 plus \$3 postage and handling.

Overall, I found this program to be everything I could hope for in a terminal program and well worth the price. I would also like to add that the distributor was extremely courteous and helpful with the few questions I had and even went out of the way in helping me get in touch with the author, who was on vacation at the time. In my opinion, this kind of service is priceless.

(Gimmesoft, P.O. Box 421, Perry Hall, MD 21128, 301-256-7558; \$39.95 plus \$3 S/H)

— Bryan Gridley

## Software

### Keyboard Commander — Learn To Type While Saving the Galaxy

*Keyboard Commander* is a typing tutor written for the 64K CoCo 1 or 2 (and CoCo 3) that teaches typing basics in a most unusual way: The student becomes a commander of a spaceship, and the keyboard keys are the controls. Interesting sound effects give the program an arcade flavor.

After the program loads and executes, you will see the inside of your spacecraft, the window and the controls (which just happen to be in the form of the CoCo keyboard). Transparent hands are shown in the "home position" and can be seen moving about the keyboard during flight.

The object of *Keyboard Commander* is to shoot down the "letter meteors" that randomly rush toward your ship. You destroy these meteors by pressing the letter on your keyboard control that represents the letter attacking your ship. If you fail to press the correct key, or if you take too long, the letter meteor

screen as it did on the text screen? That is, if the original program had PRINT @ 294, "TEST", how would I know where to position the DRAW equivalent?

Allen Owens  
Monticello, SC

Good question, Allen. I've done a lot of what you are proposing, so I think I can help clarify it for you. At first, I did a lot of guessing. Then I stopped to think about it. To illustrate what I learned, let's use a PMODE 4 screen.

Keep in mind that on the PMODE 4 screen, you have 256 pixels across by 192 pixels down on which to position text. If you divide the 256 pixels by 32 (the number of characters across on the text screen), you get eight. This is the width of each character. Now divide 192 pixels by 16 (the number of characters down on the text screen). The characters are 12 pixels high.

There are three steps in placing text on the graphics screen. First, you must define each character and put it into A\$(32) to A\$(90). This will give you most characters, excluding lowercase. Second, you must define the DRAW area, and finally, you must GOSUB to the DRAW subroutine.

Suppose you want to put the message "Basically Speaking" on the text screen. Simply type the following:

**PRINT @ 294, "BASICALLY SPEAKING"**

You now have the message displayed on the standard 32-column screen.

On the Hi-Res graphics screen, you would type the following:

**A\$="BASICALLY SPEAKING: "DRAW  
"BM48,108": GOSUBxxxx**

(where xxxx is the line number at which your DRAW subroutine is located).

Why coordinates 48,108, you ask? Simple. PRINT @ Location Number 294 on the text screen is six spaces over and nine spaces down. Multiply 6 by 8 (the width of your graphics character) and you get 48. Multiply 9 by 12 (the height of each character) and you get 108.

If your message doesn't look centered, edit the message line to read PRINT @ 295 instead of 294, and the message will be centered. On the graphics screen, however, you change the first DRAW coordinate from 48 to 56, since you have to move eight more pixels to the right to equal one space on

the text screen. Now your DRAW coordinates are 56,108.

The message is now centered *across*. To move closer to the center *up and down*, type PRINT @ 231 instead of 295. On the graphics screen, you will need to move up two spaces (24 pixels). To match the position on the text screen, your new DRAW coordinates should be 56,84.

Thinking logically is as essential as knowing how to program the computer. Everything the computer does relates to numbers in one way or another. I found out some of what I know purely by accident. The rest fell into place as I made changes and discovered that most of the changes in coordinates were divisible by 8. (Hmmm.)

Questions about specific BASIC programming problems can be addressed to BASICALLY SPEAKING, THE RAINBOW, P.O. Box 385, Prospect KY 40059.

We reserve the right to publish only questions of general interest and to edit for brevity and clarity. We are unable to answer letters individually.

**ARK ROYAL GAMES** is drastically cutting prices and reducing our inventory on most of our CoCo products. Prices have been slashed on even our new programs. Send a SASE for complete price listing or \$1.00 for catalog (refunded with first order).

# CoCo Consultations

## Speaking of DRAM Prices . . .

In this time of high DRAM prices (which has forced most RAINBOW advertisers to either charge up to \$200 for an upgrade or supply no chips with 512K boards), I am pleased to report that I recently bought Tandy's 512K CoCo 3 upgrade for under \$140.

Marlin Lee Simmons  
(TINLEE)  
Bridgewater, VA

The DRAM-chip price situation is unfortunate. Dealers and end users alike have been hurt by the part's price increase. I believe Tandy was able to order a large quantity of these chips at a "locked-in" price. However, soon (perhaps before readers see this printed) Tandy will be forced to raise its prices, too. The increases in the prices charged by RAINBOW advertisers for 512K CoCo 3 memory upgrades reflects the extreme increase in cost for the chips. Note, too, that the price of these chips varies from week to week (sometimes from day to day), so it is often impossible for dealers to post a price in the magazine, which is distributed a month or more after their ads are submitted.

## Increased Volume

When I hook a speaker to the audio output on my CoCo 3, the volume is very low. How can I use an amplifier with it?

Matt Hazard  
Columbia Station, OH

Feed the signal coming out of the audio output jack on the CoCo 3 into the auxiliary input on any high fidelity amplifier. Use that to drive a speaker. You could also hook the audio output of the CoCo 3 to the audio input of a Radio Shack speaker-amplifier (Cat. No. 277-1008) using Radio Shack cable 42-2444.

Martin H. Goodman, M.D., a physician trained in anesthesiology, is a longtime electronics tinkerer and outspoken commentator — sort of the Howard Cosell of the CoCo world. On Delphi, Marty is the SIGop of RAINBOW's CoCo SIG and database manager of OS-9 Online. His non-computer passions include running, mountaineering and outdoor photography. Marty lives in San Pablo, California.

C O C O

## CONSULTATIONS

By Marty Goodman  
Rainbow Contributing Editor

### Memory Upgrades and a 3½-inch Drive 1

I'm considering increasing my CoCo 3's memory to 512K and getting one of the new word processors specifically designed for the CoCo 3. However, the buffer of some of those programs exceeds the storage capacity of my 5½-inch drives. Will a 3½-inch drive work as Drive 1? How would I hook one up? I have a standard Radio Shack controller and a FD 502 as Drive 0.

Paul R. Broshear  
(GROUCHY)  
Saddle Ridge Trail, TX

Your major concern is how to best use one of the current generation CoCo 3 word processors, and 512K is not needed for such CoCo 3 word processors as *Telewriter 80*, *Word Power 3.1*, *Telewriter 128*, or *VIP Writer III*. The jump from 128K to 512K really does not add much in terms of actual function. At the current DRAM prices of \$12 a chip, the 512K upgrade is hideously expensive.

512K is essential if you want to run programs under OS-9 Level II. But for most Disk BASIC word processor programs, 128K should be all you ever really need. As you noted, Disk BASIC is not set up to save files bigger than 153K of data (the capacity of a single-

sided disk) even with double-sided drives. You can go to 3½-inch drives. They are electrically identical to 5½-inch drives, and using ADOS (from Spectrosystems), you can store up to a 350K file on each side of the disk. Some of the hard drive systems for the CoCo (like Burke & Burke's or RGB System's) can also handle large files under Disk BASIC. (Of course, they cost a few hundred dollars.) I do recommend that you get ADOS, if only to access your FD 502 on both sides (as if it were two drives). This will not increase the size of the biggest file you can store, but it will allow you to store twice as much on a disk.

### Artifact Colors on the CM-8

Is it possible to build a TV timer that hooks up to the CM-8 monitor or to add a composite video input to the CM-8 monitor with some adapter or hardware project? I bought a CM-8 and am unable to see the red and blue artifact colors in the many games that use the PMODE 4 screen.

Perry M. Dueck  
Rosenort, Manitoba

You cannot modify the CM-8 for RF or composite video input. While it is technically possible to do what you ask, there are no commercial devices on the market to do that and cost less than a brand new Magnavox monitor. Making such a device from scratch would involve considerable design effort, and no one who could make such a device would bother to make one for the CM-8. Those who have not yet bought an RGB monitor should note that the CM-8's lack of composite video input makes it incapable of displaying proper PMODE 4 artifact colors. The Magnavox monitor (sold by many RAINBOW advertisers) has composite video inputs (as well as other inputs) and has a sharper, higher resolution screen than the CM-8.

I suggest that those who have a CM-8 buy *RGB Patch* from Microcom. This program will allow the CoCo 3 to display some degree of "artifact color" on a CM-8 when used with most Disk BASIC games and other graphics programs. Sadly, *RGB Patch* will not help with programs running under OS-9 (including the newer Tandy OS-9 games like *Rocky's Boots* and *Robot Odyssey*).

Also, see Steven Ostrom's "Artifact

Colors on CoCo 3's RGB," (February '88, Page 114).

### Specifying CoCos

*I have a CoCo 2 (Model 26-3127B). What sort of a CoCo is that? Also, where can I get the 256K/512K Super RAM cartridge?*

Michael D.  
Zanesville, OH

The Model 26-3127B is the last 64K Extended BASIC Color Computer 2 that Tandy made before discontinuing production of the CoCo 2. Its circuit board was set up so that it could accept 64K of memory in any of three different ways: eight 64K-by-1-byte chips on the main board, eight 64K-by-1-byte chips on a plug-in satellite board, or two 64K-by-4-byte chips in two 20-pin sockets on the main board. This model also featured the T1 VDG chip that, with special software, supported lower-case characters in the 32-column video mode.

The 256K/512K Super RAM is sold by CRC in Canada. It is a RAM-disk card that plugs into the Multi-Pak Interface. It works quite well under OS-9 but has limited compatibility with Disk BASIC programs.

**Monitoring Questions**  
**Super VHS, 80-Columns and 3½-Inch**  
**80-Track Drives**

*I have three questions. First, will the Magnavox 8CM515 monitor support the new super VHS video format? Second, my television cuts off the last two or three characters on the left-hand side of the screen when I put my CoCo 3 in 80-column mode. What can I do about this? Finally, how can I use 3½-inch 80-track drives under Disk BASIC?*

Bill Sanders  
Chula Vista, CA

First, the Magnavox 8CM515 does not offer the sort of chrominance/luminance video input used with the super VHS format video signals. However, if that format catches on, adapters that will convert a chrominance/luminance signal to a RGB signal should become available commercially. Such adapters, if and when they are available, will allow any RGB analog-capable monitor to be used with the super VHS format.

Second, your problem with missing characters is caused by the *overscan* setting for the horizontal-width control. This is common to most broadcast TV

sets. The CoCo 3's 40- or 80-column mode was not really designed for use with broadcast televisions. In fact, programmers who write 40-column based software for CoCo 3s with television monitors know about this problem and don't use the extreme left columns. In theory you could open up your TV and adjust the horizontal width internally (usually there is a ferrite slug in a coil somewhere that controls this), but when watching TV shows you'd probably see a black border at the left.

Finally, Disk BASIC is poorly suited to use with 80-track drives, and I recommend that you do not try it. If you insist on trying, check with Burke & Burke about its *Hyper I/O*, or with Spectrosystems about ADOS. Those companies make patches that (to a certain extent) will allow you to use 80-track drives with Disk BASIC.

### Upgrading the Modemphone

*Is there any way to upgrade a Tandy Modemphone to run at 1200 or 2400 baud?*

Keith H. March  
(KEITHMARCH)  
Continental, OH

I'm afraid that 1200- and 2400-baud modems are different both from each other and from 300-baud modems (more expensive to make, too). There is no reasonable way to convert one to another. You must buy a new modem if you want higher baud-rate capability than your current modem supports.

### Major Circuitry Differences

*A circuit for the CoCo 1's color monitor driver appeared in Hot CoCo, August '83. I was unable to get this circuit to work on a CoCo 2. Can you help me?*

Fulton Smith, Jr.  
Southfield, MI

Even though the circuits may appear similar at first glance, the color video circuitry of the CoCo 2 is quite different from that of the CoCo 1. Unlike the CoCo 1, the CoCo 2 uses the RF modulator portion of the 1372 chip. Therefore, there is virtually no color video signal available where there is on the CoCo 1 circuits. Color monitor driver circuits for the CoCo 2 are considerably more complicated than those for the CoCo 1, and because there were several available commercially when the CoCo

2 was in production, I never bothered to develop one myself. Now that the CoCo 2 is no longer in production, many of those monitor drivers may not be available. Try Computerware, and check the ads in RAINBOW for other possible sources.

### ADOS to the Rescue (Again)

*How can I permanently program F1 and F2 to complete various functions or commands? How can I do the same with other keys?*

Claud Gervais  
Herouxville, Quebec

Although frequent readers of this column may be tired of seeing me plug the system, ADOS (sold by Spectrosystems) is the answer to your question. Once configured and burned into the EPROM that will replace your Disk BASIC ROM, ADOS allows you to have single key strokes produce customized results *permanently*, (i.e., creating various BASIC programming word or multiple-word commands).

### Asking the Impossible

*Can I use a CoCo 3 and a DCM 6 modem to send Spectacular worksheets from Ymodem to my company's FAX machines?*

Augusto Vajes  
Lima, Peru

I'm afraid that is not possible for two reasons. First, spreadsheets consist of character, or ASCII, data. FAX data consists of graphic, or photographic, data. Second, the way in which 300-baud computer modems encode data differs completely from the way in which the modems in FAX machines encode their data.

Your technical questions are welcomed. Please address them to CoCo Consultations, THE RAINBOW, P.O. Box 385, Prospect, KY 40059.

We reserve the right to publish only questions of general interest and to edit for brevity and clarity. Due to the large volume of mail we receive, we are unable to answer letters individually.

Questions can also be sent to Marty through the Delphi CoCo SIG. From the CoCo SIG> prompt, pick Rainbow Magazine Services, then, at the RAINBOW> prompt, type ASK (for Ask the Experts) to arrive at the EXPERTS> prompt, where you can select the "CoCo Consultations" online form which has complete instructions.

# Doctor ASCII

## T/S Spell and TW-64 Compatibility

D O C T O R

I recently purchased Tandy's OS-9 based spelling checker, T/S Spell. Files saved to disk under my favorite word processor, TW-64, will not read into T/S Spell. I assume that the difference in directory locations between Disk BASIC and OS-9 is at least part of the problem. Both are super programs. Is there a way to make them compatible? I have a CoCo 3 with 128K, two Radio Shack disk drives, a CM-8, a DMP-200 printer, and a CCR-81 recorder.

Edward Scott  
Canaan, CT

**R**The directory structures for OS-9 and Disk BASIC differ completely. To check the spelling of a *TW-64* document with *T/S Spell*, save the document in ASCII format and then use a file transfer program (like *TRSCopy*) to move it over to an OS-9 diskette.

## ROM Pack Problems

I have just received my new 128K CoCo 3. I have a Radio Shack MultiPak Interface (MPI), cat. #26-3024. When I use a power strip to power up the computer and MPI together, everything works except my EDTASM+ pak. I have no problem switching between other packs, but when I switch to EDTASM+ the screen fills with garbage. Will a new PAL chip in the MPI solve this problem? Is there a patch to upgrade OS-9 Level I to Level II? Is the fan in the FD 501 disk drive necessary, or can I remove it? Where can I get an extension cable for my keyboard?

Bill Irwin  
Toledo, OH

**R**First, count yourself lucky that only one of your ROM packs is not compatible with the CoCo 3. The PAL chip upgrade is unrelated to this problem. You could use Roger Schrag's patches to move your EDTASM+ code

Richard Esposito is the principal engineer for BDM Corporation. He holds bachelor's, master's and doctorate degrees from Polytechnic Institute of Brooklyn. He has been writing about microcomputers since 1980.

with Richard W. Libra

to disk. (see "Patching EDTASM to Run on Disk," December '82, Page 29; "Patching The Patch: EDTASM to Disk Revealed," April '83, Page 194; or "Superpatch for EDTASM," September '83, Page 66). Second, OS-9 Level I and Level II are completely different products. There is no patch or upgrade available; however, you can use the assembler and some of the utilities from Level I with Level II. Third, the fan in the 501 is there to dissipate the heat generated from the power supply. Removing the fan could shorten the disk drive's life. Finally, Marty Goodman has contracted with several RAINBOW advertisers to sell his keyboard extender cable.

## Needs a Patch

I typed in the listing for PAKXFER from the December '87 issue ("Pak to Disk Transfer," Page 152). I also looked over the patches for problem ROM packs listed in your March '88 column [Page 16]. Do you have a patch for recording the new

CoCo 3 ROM Packs to disk? I am interested in recording Thexder and Shanghai.

David Morrison  
Brewer, ME

**R**See the August '88 "CoCo Consultations" [Page 162].

## Information, Please

I Where I can find extensive information on the following: CoCo's sound I/O, data transmission through the RS-232, the ROM port, CoCo 3's new machine language instructions and addressing the disk drive directly (not through ROM subroutines)?

Dave Brain  
Troutdale, OR

**R**Order the CoCo 3 Service Manual (Part #MS-2603334, \$15.60) from Tandy National Parts, and read Scott Honaker's "Exercise Your Drives" [RAINBOW, June '88, Page 110].

## Try the Clone

I bought a copy of Xterm because the ad said that it works with the CoCo's serial port. This may be true, but I have OS-9 Level II, which will not work with the CoCo 2. Xterm and Wiz both call for the RS-232 Pak. According to my local Radio Shack, the RS-232 Pak is no longer available. I would really like to use my OS-9 with a terminal program, but they all call for the RS-232 Pak. Is there a substitute?

Michael E. Phelps  
Belleville IL

**R**Disto is currently marketing an RS-232 SuperPack clone of the original Tandy Pak (without the virtually useless ROM-based communications software) for \$49.95.

## Device Descriptor Problems

I have a 512K CoCo 3 with a MultiPak Interface, a hard disk interface, 15-Meg hard drive, and OS-9 Level II. I can't get OS-9 to talk to the hard drive. If I boot with Level I Version 2.00 and attempt to format /h0 I get Error #247 (seek error). When I copy the device descriptor and device driver to a Level II disk and try to format, I get Error #237 (memory full). I don't really want to reformat the drive, but I

can't access any of the data already stored there. The hard drive worked fine with OS-9 Level I (both versions). My problems started after I had the Multi-Pak upgraded to work with Level II. Now that the Multi-Pak has been modified, I can't even use it with Level II! My floppy controller works fine in Slot #4 of the Multi-Pak, so I don't think the problem is in the Multi-Pak itself. Should the software be modified? I have spoken to five different people at Radio Shack stores, and no one knows what to do about this problem.

Charles Steinfeldt

**R** You need to change offset \$0E of each of your hard disk device descriptors from \$FF to \$7F (probably `/h0` and `/d0`). The hard drive driver and descriptor for OS-9 Level II are included in the Development System from Radio Shack.

#### A Simple Sparkle Solution

**I**s there a simple way to address the sparkle problem that does not entail replacing the soldered-in microprocessor or the \$50 GIME chip?

Juan Diaz  
San Juan, PR

**R**I solved the sparkle problem (small bouncing dots on the screen during 2-Mhz operation) on my CoCo 3 by following Roger Krupski's advice. I replaced R9 and R10 (47-ohm resistors) with 100-ohm resistors and C10 and C11 (39-pF capacitors) with 47-pF capacitors. I carefully clipped the old resistors and capacitors, and I soldered the new ones onto the remaining leads — unsoldering was not required. For more information on the sparkle problem, see Marty Goodman's "Quick Fixes," October '88, Page 58.

#### Reprint Request

**I** tried to get a reprint of your article, "Disk Utilities," from CW Communications, but I did not receive a reply. Could you suggest any other way to get a reprint of this article?

Floyd Craig  
Toronto, OH

**R** Try calling its business office at 1-800-441-4403.

#### Upgrade Prescription

**I**want to upgrade an early CoCo 1 D-Board to 64K. I have Color Computer Secrets Revealed by Disk 'N Data, which shows the upgrade of later

	Single-sided	Double-sided	Double-sided
Offset	35 track value	40 track value	80 track value
\$16	\$01	\$01	\$03
\$18	\$23	\$28	\$50
\$19	\$01	\$02	\$02

Figure 1

models but does not provide the directions needed to upgrade earlier models. Can you help?

Lonnie Morosic  
McCook, NE

**R** See B. H. Alsop's "D-Board 64K Upgrade," RAINBOW, March '83 [Page 100]. This article offers a unique approach using modified sockets, which avoids the need to cut traces.

#### Hard Disk Guide

**I** have been considering getting a hard disk for my CoCo 2, but there are several things that I need to know before I invest \$600 to \$700. Does a hard disk work on the CoCo like it does on an MS-DOS computer? Is there an established hierarchy of directories like in MS-DOS or OS-9? There are several systems advertised in RAINBOW, but the ads don't give enough information about the product to help me choose a system.

Erasmo A. Martinez  
Watertown NY

**R**I have been using a Seagate ST-225 20-Meg hard disk with a Western Digital controller and a Burke & Burke CoCo XT-RTC interface for over a year. It cost me around \$450. OS-9 has the same hierarchical directory structure as MS-DOS, but it had it first. OS-9 was designed for — and runs well on — a hard drive. Disk BASIC, on the other hand, was designed for 35-track, single-sided floppy operation. Therefore, its hard disk operation techniques vary from using the hard drive as several floppies to modifying Disk BASIC to handle the whole drive. While OS-9's operation with a hard drive works with all of your software, Disk BASIC's operation will reveal some incompatibilities.

#### A Patch Explained

**I**n your June '87 column [Page 90] you answered a question about 3½-inch drives and offered a short program patch to be used with Modpatch. Near the end of the answer you stated, "You can add the missing descriptors to

the modules directly and build the system directly with config." You were talking about `/dd` and `/d0` for 80-track drives. How do you do this? I have two 40-track double-sided disk drives, one 80-track, 3½-inch disk drive and DMode from Computerware (only for 40 tracks as far as I know). I want to get the Save command for Level II. Would you give me the patch program and the steps I need to follow. Also, is DModc geared for 80 tracks or do I have to buy SDisk3?

E.G. Douglas  
Stillwater OK

**R**If you have Kevin Darling's DMode, you can patch the descriptors directly on disk in your Config Modules directory. If you patch with Modpatch and then use Save, you'll need to know the address offsets in the descriptors (Figure 1).

You may also want to modify offset \$14, which controls the step rate (\$00 for 30 ms, \$01 for 20 ms, \$02 for 12 ms and \$03 for 6 ms). Do not forget to verify. SDisk3 is not needed if you only want to support other size drives or vary the step rate under OS-9 Level II. The Level I drivers for OS-9 were hard-coded for single-sided operation. Consequently, SDisk, or an equivalent, was required for two-sided operation. However, with Level II, all you need for different size drives is to modify the device descriptors.

For a quicker response, your questions may also be submitted through RAINBOW's CoCo SIG on Delphi. From the CoCo SIG> prompt, pick Rainbow Magazine Services, then, at the RAINBOW> prompt, type ASK for "Ask the Experts" to arrive at the EXPERTS> prompt, where you can select the "Doctor ASCII" online form which has complete instructions.

The last three columns have presented a series of four early-childhood education programs: *Opposites* (parts I and II) and *Match Game of Opposites* (parts I and II). From the mail I have received on the first installment, I believe that these programs will help fill a vacuum in the CoCo Community's software library.

This month, let's look at the final installment in this series. *Picture This* allows children to use all the skills developed in the first four programs and take them one step further. While some of the graphics will be the same as those in the last four programs, the DATA statements are *not* interchangeable. The alphanumeric part of each graphics string has been deleted. Instead, graphics text characters will be represented by an array of graphics alphanumeric strings.

#### Our Purpose

Why do we need this fifth program? In both the *Opposites* and *Match Game of Opposites* series, we dealt strictly with abstract concepts. We related a picture to a word and to its opposite.

In *Picture This*, the user must take this knowledge and correctly insert the correct word in each sentence. Each concept's graphic representation is still given, but this time each concept is shown individually. For each concept, a sentence with a missing word (blank) represented by the graphic is presented with a series of possible answers. The question would appear in the following format:

THIS LITTLE SNAIL IS  
VERY . . .  
A) THICK  
B) SLOW  
C) DRY  
D) FAST

In this example, the screen would include our snail graphic. (So that's where our old friend the snail from

*Fred Scerbo is a special needs instructor for the North Adams Public Schools in North Adams, Massachusetts. He holds a master's in education and has published some of the first software available for the Color Computer through his software firm, Illustrated Memory Banks.*

*Building on the skills developed in earlier games*

# Growing Up With CoCo

By Fred B. Scerbo  
Rainbow Contributing Editor

*Snail Invaders* [February '82, Page 17] and *Snail's Revenge* [July '83, Page 138] turned up. I have promised long-time readers his return for some time.)

As with quiz programs presented in previous issues, the user needs only to press the letter representing the correct response. The program corrects and scores the responses.

#### Typing in the Program

This program listing is much longer than listings for the last four programs. Since you cannot use the DATA statements from previous months, type in the program very carefully. There are no bugs in the program. Any bugs that show up will be your own. To be safe, get RAINBOW ON TAPE or DISK for a bug-free copy.

Every data line that includes a statement also has an asterisk (\*). This will be recognized as an underline in the program. I thought that indicating a blank in this manner would be more attractive than using a string of periods. Therefore, type each data line exactly as you see it.

#### Using the Program

When you run the program, the familiar title screen will appear. You will be asked to select a level from one to eight by pressing the appropriate number. There are a total of eighty

graphics and statements, so each level will present 10 questions. Each set of 10 will be assorted randomly, but you can control the set shown by selecting the level.

As with our other quiz programs, you only need to select the letter corresponding to the correct choice. If the answer is correct, the screen will display, "Very Good." An incorrect response will cause the screen to print "Sorry!" In both cases, an arrow will flash next to the correct response.

If you press ENTER, you will move to the next screen. You may also press @ to go to the scorecard. At that point, you will be asked if you want to try again. You may then press C to continue where you left off, Y (yes) to start a new quiz or N (no) to quit.

That's all there is to it. Young users may need an adult to read the sentences. This promotes the whole educational process with your children and gives you and the kids some fun time together. (Learning can be fun for everyone, right?)

#### Conclusion

This month's listing is very long. Since we covered the educational theories in the last three columns, there is no need to repeat them here. I hope you find this program as useful as the ones from the last three months. They make a nice set, and they also help teach some important skills.

Once again I must thank those of you who have donated your old silver CoCos to our special needs classes. It seems that just when I think I have seen the last donation, another kind soul sends us another large box. As always, the machines are put to good use in one of our special needs classes. See you next month. □

*If you have an idea for the "Wishing Well," submit it to Fred c/o THE RAINBOW. Remember, keep your ideas specific, and don't forget this is BASIC. All programs resulting from your wishes are for your use, but remain the property of the author.*

## THE POWER STONES OF ARD

### THE QUEST FOR

### THE SPIRIT STONE

You're tired, you're hungry, not to mention you're badly injured. No one in town seems to want to talk to you. Your magic sword has stopped glowing, the room is dark, you're out of spells, you can't get your wand to work, you won't swear to it but you may be lost, you have no idea what that last puzzle meant, and you hear something large moving just beyond the only door. The old sage warned you there would be days like this!

"QUEST FOR THE SPIRIT STONE" is an Adventure that will keep you playing for hours. It features single keystroke commands, 16 color graphics, 100% Hi-Res graphics screens, full game save, extensive playing area, level advancement, and the disk is not copy-protected. You choose your character's name, race, sex, and ability scores. The use of arrow keys simplifies movement. This one is easy to play but a challenge to complete!

*"Fun and challenging... should find its way into many CoCo 3 software collections."* 8/88 RAINBOW review

**ONLY \$18.00 AND WE PAY SHIPPING!**

COLOR COMPUTER 3 AND ONE DISK DRIVE REQUIRED

## VIP Calc

### "MORE USEABLE FEATURES"

### FEBRUARY 1985 "RAINBOW"

Now every CoCo owner has access to a calculating and planning tool better than VisiCalc™, containing all its features and commands and some. VIP Calc displays 32, 51, 64 or 85 characters by 21 or 24 lines right on the screen. VIP Calc allows up to a 33K worksheet with up to 512 columns by 1024 rows! In addition, VIP calc has multiple windows which allow you to compare and contrast results of changes. Other features include 16 DIGIT PRECISION • trig. functions • averaging • algebraic functions • column and row ascending or descending SORTS • locate formulas or files in cells • block move and replicate • global or local column width • limitless programmable functions • works with an inter Embed • inter control codes for customized printing. Combine spreadsheet tables with VIP Writer documents to create ledgers, projections, statistical and financial budgets and reports. Requires 64K.

DISK \$59.95

## VIP Speller

### INCLUDES 50,000 WORD DICTIONARY

VIP Speller works with ANY ASCII file created by most popular word processors. It automatically checks text files for words to be corrected, marked for special attention or even added to the 50,000 word Dictionary. You can even view the word in context. Words can be added to or deleted from the dictionary or you can create your own dictionary! DISK \$34.95

## MJK & MJK3 DOS

### WHY BUY ADOS 3

### WHEN YOU CAN HAVE THIS

**MJK-DOS** for COCO 1, 2, and 3 \$39.95  
Most powerful operating system for the CoCo ever!  
Allows up to 3 DS-80 track driver or standard drives. The  
DS-80 drives are software configurable to standard Radio  
Shack® format in order to maintain compatibility. Allows  
global file name specification with wildcards. All the files will  
be displayed alphabetically, including the date that the file  
was saved. One command to KILL or COPY a number of  
files that meet the global filename specification (can be a  
full disk) in one run or one at a time upon user prompt  
(T-key). One the powerful CHAIN command to use programs of  
any length. One the built in FULL SCREEN EDITOR to allow  
fast and easy program modification. You can even use the IZON  
command that will put you (after no error) to the modified  
line editor or get the automatic error trap routine with  
fully spelled out error names. Hit one key to repeat the last  
command. You will also get error trap, repeat key, AUTO,  
DATE, CAY (two column of directory with only the filenamer  
& extenstion), WAIT, RUNN, BAUD, FIND, DLD, DATS, (listing in  
basic program), LCOPY (groups of basic lines), REPL (to  
replace a string), TYPE (list a text file on screen/printer),  
SPLIT or JOIN binary lines, SAY for real spoken text, word seek  
& poke and many more... MJK-DOS is primarily intended for  
double-sided HD-track driver (720K each).  
\*ALLOWS YOU TO READ/WRITE/FORMAT 35/40 DISKS ON A 80T DRIVE!  
\*\*\*\*\* EPROMABLE \*\*\*\*\* \*\*\*\*\* ERIC UPDATES FOR 1 YEAR !!!!

MJK512 DOS(COCO1-3-DISK) \$39.95  
BUILT IN RAM DISK AND RAM TEST COMMANDS  
Monitor-DiskAssembler (COCO 1, 2, 3) \$39.95  
Source-Code Generator/LabelGenerator (COCO1,2,3) \$39.95  
JB REMOTE ri-232 pack driver for bbs etc (COCO1,2,3) \$19.95  
HEVKEY (COCO1) new key escaper gives you true ALT & CTRL \$15.00  
HEVKEY232(COCO3)--JB REMOTE and HEVKEY in one package \$25.00  
RTC -real time hardware clock for the coco 1,2,3 \$35.00

The VIP Integrated Library combines all six popular VIP programs - VIP Writer\*, Speller, Calc, Database\*, Terminal and Disk-Zap - into one program on one disk. The program is called VIP Desktop. From the desktop you have instant access to word processing with a spelling checker always in attendance, data management with mail-merge, spreadsheet analysis and just about all communications and disk maintenance. Just move the hand to the volume on the bookshelf and the application is there. 64K req'd. \$149.95  
\*CoCo 3 owners: See our FULL PAGE AD!

## SD Enterprises

(503) 663-2865 P. O. BOX 1233, Gresham, OR. 97030  
Please add \$3 for shipping. COD orders add an additional \$2.25. Personal  
checks allow 3 weeks for delivery. All other orders shipped the same day.

## CBASIC III EDITOR/COMPILER

### The ULTIMATE Color Computer III BASIC COMPILER!!!

If you want to write fast efficient machine language programs and you don't want to spend the next few years trying to learn how to write them in Assembly language or with a cheap compiler, then CBASIC III is the answer!!!

CBASIC III is the only fully integrated Basic Compiler and Program Editing System available for the Color Computer 3. It will allow you to take full advantage of all the capabilities available in your CoCo-3 including 512K RAM, without having to spend years trying to learn assembly language programming. CBASIC III allows you to create, edit and convert programs from a language you are already familiar with Enhanced Disk Color Basic, into fast efficient machine language programs easily and quickly. CBASIC III supports all the enhanced hardware available in the CoCo-3, including Hi-Res Graphics, & Screen displays, Extended Memory and Interrupts (Keyboard, Timer, Serial & Clock). We even add advanced commands not available in Basic to give you a level of control only available to very advanced Machine Language Programmers. Plus we made it exceptionally easy to use, not like some other compilers. CBASIC III is the friendliest and easiest compiler available for the Color Computer III.

CBASIC III is a powerful tool for the beginner as well as the Advanced Basic or Machine Language programmer. You can write programs without having to worry about the Stack, DP Register, memory allocation and so on, because CBASIC III will handle it for you automatically. For Advanced users, CBASIC III will let you control every aspect of your program, even generating machine code directly in a program easily.

CBASIC III features well over 150 Compiled Basic Commands and Functions that fully support Disk Sequential and Direct access files, Tape, Printer and Screen I/O. It supports ALL the High and Low Resolution Graphics, Sound, Play and String Operations available in Enhanced Color Basic, including Graphics H/GET, H/PUT, H/PLAY and H/DRAW, all with 99.9% syntax compatibility. CBASIC III also supports the built in Serial I/O port with separate programmable printer and I/O baud rates. You can send and receive data with ease to use PRINT, INPUT, INKEY, GETCHAR and PUTCHAR commands.

CBASIC makes full use of the powerful and flexible GIMI chip in the Color Computer 3. It will fully utilize the 128K of RAM available and install 2 Ultra Fast Ramdisks if 512K is available, for program Creation, Editing and Compilation. You can easily access all 512K of memory in a Compiled program thru several extended memory commands that can access it in 32K or 8K blocks and single or double bytes.

CBASIC has its own completely integrated Basic Program Editor which allows you to load, edit or create programs for the compiler. It is a full featured editor designed specifically for writing Basic programs. It has block move and copy, program rennumbering, automatic line number generation, screen editing, printer control and much more.

The documentation provided with CBASIC III is an 8 1/2 by 11 Spiral Bound book which contains approximately 120 pages of real information. We went to great lengths to provide a manual that is not only easy to use and understand, but complete and comprehensive enough for even the most sophisticated user.

CBASIC III is the most expensive Color Basic Compiler on the market, and well worth the investment. You can buy a less expensive compiler for your CoCo-3, and then find out how difficult it is to use, or how limited its features are. Then you'll wish you had bought CBASIC III in the first place. Dollar for dollar, CBASIC III gives you more than any other compiler available. If you can find a better CoCo-3 Basic Compiler then buy it!!!

Requires 128K & Disk \$149.00

## DATAPACK III PLUS V1.1

### SUPER SMART TERMINAL PROGRAM AUTOPilot & AUTO-LOG PROCESSORS X-MODEM DIRECT DISK FILE TRANSFER VT-100 & VT-52 TERMINAL EMULATION

- No lost data even at 2400 baud on the COCO-3 Serial I/O port.
- 8 Display Formats, 32/40/64/80 columns at 192 or 225 Res.
- 50K Text Buffer when using the Hi-Res Text Display & Disk.
- ASCII & BINARY disk file transfer support via XMODEM.
- Direct record receive direct to disk file (Data Logging).
- VT-100 terminal emulation for VAX, UNIX and other systems.
- VT-100/52 cursor keys, position, insert/delete, FF & Alt. keys.
- Programmable Word Length, Parity, Stop Bits and baud rates.
- Complete Full and Half Duplex operation, with no garbled data.
- 9 Variable length, Programmable Macro Key buffers.
- Programmable Printer rates from 110 to 9600 baud.
- Send Files directly from the Buffer, Macro Keys or Disk.
- Display on Screen or Print the contents of the Buffer.
- Freeze Display & Review information on screen with no data loss.
- Built in Command Help (Help) Display.
- Built in 2 Drive Ramdisk for 512K RAM support and much more.

Supports: R.S. Modem-Pak & Deluxe RS-232 Pak, even with Disk.

Requires 128K & Disk, \$59.95

## EDT/ASM III

### 128/512K DISK EDITOR ASSEMBLER

EDT/ASM III is a Disk based co-resident Text Editor & Assembler. It is designed to take advantage of the new features available in the CoCo-3 with either 128K or 512K of memory. It has 8 display formats from 32/40/64/80 columns by 24 lines in 192 or 225 Resolution, so you use the best display mode whether you are using an RGB or Composite monitor or even a TV for your display. Plus you can select any foreground or background colors or even monochrome display modes. It will even support 512K by adding an automatic 2 drive Ultra Fast Ramdisk for lightning fast assembly of program source code into thin memory. There is also a nice standing ML Debug Monitor, to help you debug your assembled programs. EDT/ASM III has the most powerful, easy to use Text Editor available in any Editor/Assembler package for the Color Computer.

- Supports Local and Global string search and/or replace.
- Full Screen line editing with immediate line update.
- Easy to use Single keystroke editing commands.
- Load & Save standard ASCII formatted file formats.
- Block Move & Copy, Insert, Delete, Overtype.
- Create and Edit files larger than memory.

The Assembler portion of EDT/ASM III features include:

- Supports the full 6809 instruction set & cross assemblies 6800 code.
- Supports Conditional IF/THEN/ELSE assembly.
- Supports Disk Library file (include) up to 9 levels deep.
- Supports standard Motorola assembler directives.
- Allows multiple values for FCB & FDB directives (unlike R.S. EDT/ASM)
- Allows assembly from the Editor Buffer, Disk or both.

Requires 128K & Disk \$59.95

## TEXTPRO IV

### The ADVANCED COCO-3 Word Processing System™

- 911-Rrs Displays from 58 to 212 columns by 24 lines in 256 Res.
- On Screen Display of Bold, Italics, Underline & Double Width print.
- Up to 8 Programmable Character Sets Supported with Justification.
- Up to 80 Programmable Function Keys & Loadable Function key sets.
- Fully Bi-Level keyboard accepts dual even timing disk access.
- Autoexecute Startup files for easy printer & system configuration.
- 8 Pre-Defined Printer Function commands & 10 Programmable ones.
- Supports Library files for unlimited printing & configurations.
- Disk file format access for Mail Merge & Boiler Plate printing.
- Completely Automatic Justification, Centering, Flush left & right.
- Change indents, margins, line length, etc. anywhere in the text.
- Create and Edit files larger than memory, up to 1 full disk.
- Easily embed any number of printer format and control codes.
- Built in Ultra Fast 2 drive RAMDISK for 512K support.

TEXTPRO IV is the most advanced word processing system available for the COCO-3, designed for speed, flexibility and extensive document processing. It is not like most of the other word processing programs available for the Color Computer. If you are looking for a simple word processor to write letters or other short documents, and never expect to use multiple fonts or proportional spacing, then most likely you'll be better off with one of the other simpler word processors. But, if you want a powerful word processor with extensive document formatting features to handle large documents, term papers, manuals, complex formatting problems and letter writing, then TEXTPRO IV is what you're looking for. It works in a totally different way than most word processing programs. It uses simple 2 character abbreviations of words or phrases for commands and formatting information that you embed directly in your text. There are over 70 different formatting commands you can use without ever leaving the text your working on. These are no time consuming, and often frustrating menu choices, you are in total control at all times. You can see what the formatted document will look like before a single word is ever printed on your printer, including margins, headers, footers, page numbers, page breaks, column formatting, justification, and Bold, Italic, Underline, Double Width, Superscript and Subscript characters right on the screen.

TEXTPRO IV can even support LASER PRINTERS with proportional fonts. Take a good look at this AD! It was done with TEXTPRO IV on an OKIDATA LASERLINE-6 laser printer!!! All the character sets used on this AD are proportional spaced characters, all centering, justification, and text printing was performed automatically by TEXTPRO IV.

Requires 128K & Disk \$89.95

## HI-RES III Screen Commander

### The DISPLAY you wanted but didn't get on your CoCo-3

- 54 Different Character Sizes available from 14 to 212 cpi.
- Bold, Italic, Underline, Subscript, Superscript and Plain character styles.
- Double Width, Double Height and Quad width characters.
- Scroll Protect from 1 to 23 lines on the screen.
- Mixed Text & Graphics in HSCREEN 3 mode.
- PRINT @ is available in all character sizes & styles.
- Programmable Automatic Key repeat for fast editing.
- Full Control Code Keyboard supported.
- Selectable Character & Background color.
- Uses only 4K of Extended (2nd 64K) or Basic RAM.
- Written in Ultra Fast Machine Language.

HI-RES III will improve the standard display capabilities of the Color Computer 3, even the 40 and 80 column displays have several features missing. For example, you can't use PRINT @ or have different character sizes on the same screen, even when mixing text and graphics with the HPRINT command. HI-RES III give you the kind of display you always dreamed about having on your CoCo-3, with a wide variety of display options that you can easily use with your Basic or M1, programs.

HI-RES III is totally compatible with Enhanced Color Basic and its operation is invisible to Basic. It simply replaces the normal screen display with an extremely versatile display package. With the full control code keyboard, you can control many of HI-RES III extended functions with just a couple of simple keystrokes.

Requires 128K Tape or Disk \$34.95

## 512K RAMDISK & MEMORY TESTER

RAMDISK is an All Machine Language program that will give you 2 ULTRA High Speed Ram Disks in your CoCo-3. It does not need or require the OS-9 operating system. It works with R.S. DOS V1.0 or V1.1 and it is completely compatible with Enhanced Color Disk Basic! Plus it allows your CoCo-3 to run at double speed all the time even for floppy disk access!!! It will not disappear when you press reset like some other ramdisk programs. The MEMORY tester is last ML program to test the 512K ram. It performs several bit tests as well as an address test so you know that your 512K of memory is working perfectly.

Requires 512K & Disk \$19.95

## "The SOURCE III"

### DISASSEMBLER & SOURCE CODE GENERATOR

The SOURCE III will allow you to easily Disassemble Color Computer machine language programs Directly from Disk and generate beautiful, Assembler compatible Source code.

- Automatic label generation and allows specifying FCB, FDB and FCC areas.
- Disassembles programs Directly from disk, unlike other disassemblers.
- Automatically locates Begin, End and Execution address.
- Output Disassembled listing with labels to the Printer, Screen or both.
- Generates Assembler source files directly to disk or printer.
- Built in Hex/Ascii dump/display to locate FCB, FCC & FDB areas.
- 8 Selectable Display formats 32/40/64/80 columns in 192 or 225 Res.
- Selectable Foreground & Background colors & Printer Baud rates.
- Built in Disk Directory an Kill file commands.
- Menu display with single key commands for smooth, Easy operation.
- Written in Ultra Fast Machine Language.

Requires 128K & Disk \$49.95

To order products by mail, send check or money order for the amount of purchase, plus \$3.00 for shipping & handling to the address below.  
To Order by VISA, MASTERCARD or COD call us at (702) 452-0632

# "Window Master"

## Screen Display Fonts

Window Master supports up to 54 different character sizes on the screen with 5 different character styles. You can have Bold, Italic, Underlined, Super-Script, Sub-script or Plain character styles or any combination of them in any character size. You can also change the text color and background at any time to get really colorful displays.

## Fully Basic Compatible

Window Master is fully compatible with Enhanced Color Disk basic with over 50 Commands & functions added to fully support the Point & Click Window System. Window Master does not take any memory away from Basic, so you still have all the Basic Program memory available.

## Hi-Resolution Displays

Window Master uses the full potential of the Color Computer 3 display by using the 325 vertical resolution display modes instead of the 192 or 200 resolution modes like most other programs. It uses either the 320/16 color mode or the 640/4 color display to give you the best display resolution possible, and can be switched to either mode at any time.

## Mixed Text & Graphics

Window Master fully supports both Text & Graphics displays and even has a Graphics Pen that can be used with HLINE, HCIRCLE, HSET and more. You can change the Pen width & depth and turn it on or off with simple commands. We also added Enhanced Graphics Attributes that allow graphics statements to use And, Or, Xor and Copy modes to display graphic information. With the Graphics enhancements added by Window Master, you could write a "COCOMAX" type program in Basic! In fact we provide a small graphics demo program written in Basic.

## Event Processing

Window Master adds a powerful new programming feature to Basic that enables you to do "Real Time" Programming in Basic. It's called Event Trapping, and it allows a program to detect and respond to certain "events" as they occur. You can trap Dialog activity, Time passage, Menu Selections, Keyboard activity and Mouse Activity with simple On Gosub statements, and when the specified event occurs, program control is automatically routed to the event handling routine, just like a Basic Gosub. After servicing the event, the sub-routine executes a Return statement and the program resumes execution at the statement where the event occurred.

## Enhanced Editing Features

Window Master adds an enhanced editor to Basic that allows you to see what you edit. It allows you to insert & delete by character or word, move left or right a word or character at a time, move to begin or end of line, toggle automatic insert on/off or just type over to replace characters. The editor can also recall the last line entered or edited with a single key stroke. You can even change the line number in line to copy it to a new location in the program.

## Window Master Features

### Multiple Windows

Window Master supports multiple window displays with up to a maximum of 31 windows on the screen. Overlapping windows are supported, and any window can be made active or brought to the top of the screen. Windows can be picked up and moved anywhere on the screen with the mouse. There are 6 different Window styles to choose from and the window text, border and background color is selectable.

### Pull Down Menus

Menus are completely programmable with up to 16 menus available. They can be added or deleted at any time in a program. Menu items can be enabled, disabled, checked or cleared easily under program control. Menu selection is automatically handled by Window Master & all you have to do is read a function variable to find out which menu was selected.

### Buttons, Icons & Edit Fields

Each Window can have up to 128 buttons, icons or edit fields active, if you can fit that many. Buttons, Icons and Edit field selection is handled automatically by Window Master when the mouse is clicked on one. All you have to do is read a Dialog function to find out which Button, Icon, or Edit field was selected, its very simple.

### Mouse & Keyboard Functions

Window Master automatically handles the Mouse pointer movement, display and button clicks. It will tell you the current screen coordinate, the local window coordinate, window number the mouse is in, the number of times the button was pressed, which window number it was clicked in and more. The Keyboard is completely buffered, and supports up to 80 programmable Function keys that can contain any kind of information or command sequences you can imagine. You can load and save function key sets at any time. So, you can have special sets of function keys for different tasks. The "Ctrl" key is supported so that you have a full control code keyboard available.

### Window Master Applications

Window Master pushes the Color Computer 3 far beyond its normal capabilities, into the world of a "User Friendly" operating environment. We are already planning several new programs for use with Window Master. So you don't have to worry about having to write all your own programs. And don't forget that many existing Basic and M.L. programs will run under Window Master with little or no changes. The Possibilities for Application programs are endless: Spread Sheets, Word Processing, Communications, Education, Games, Graphic Design, Desk Top Publishing and on and on.

### Hardware Requirements

Window Master requires 512K of memory, at least 1 Disk Drive, a Hi-Res Joystick Interface and a Mouse or Joystick.

### Technical Assistance

If you run into difficulty trying to use some of Window Master's features, we will be happy to assist you in any way possible. You can write to us at the address below or call us between 10am and 2pm Pacific Standard Time for a more timely response. Sorry, no collect calls will be accepted.

### Ordering Information

To order WINDOW MASTER by mail, send check or money order for \$69.95, plus \$3.00 for shipping & handling to the address below. To order by VISA, MASTERCARD or COD call us at (702)-452-0632

(Monday thru Saturday, 8am to 5pm PST)

Ever notice that my articles run in patterns? Usually, I start with a simple project for the beginner, move on to a harder, longer project and then finish with an electronic lesson. Well, it's time, once again, for a beginner's project. It is always hard to design a simple project that actually does something. As an electronics student in college, I did a lot of labs. They were simple, but they were *boring*. (Set the power supply to 10 volts. Put two resistors in series. Measure the voltage across the two resistors. Compare the values to that of the calculated voltage values.) Those labs were enough to put you to sleep in the middle of a lab.

For this column, I had to design a project that is simple but not boring. I checked to see what beginners wanted as a starter project. Most said they wanted something that worked in front of them — something that buzzed, beeped, moved or lit up. In the past, I have had projects using an LED to indicate that power is on, the disk drive is on, etc. LEDs are always a good project, and this beginner's project makes the computer control up to eight

# A Simple, Expandable LED Project

By Tony DiStefano  
Rainbow Contributing Editor

LEDs. (Note: Even though this project is for beginners, some electronics knowledge is required. Read the article and judge for yourself if you understand enough of it to try it.)

I will continue this project for a few months and make it grow into a miniature control center. This project will show the beginner how to turn on LEDs, small motors, relays, sensor devices, etc. If you come up with a few ideas, let me know. You can write to me

in care of THE RAINBOW or reach me on Delphi.

As with any project, you need tools. How far you want to go with this project will determine how many tools and parts you will need. To begin the project, you will need the following parts:

Part #	Description
U1	74LS273
C1	.1uf 10 volts
R1 to R8	470 ohm 1/4 watt
D1 to D8	LED (just about any kind)
Misc.:	20-pin socket and wire.

You may already have some of these materials, and most are available at your local Radio Shack. You may need to get some parts through a mail order service. Many companies that have the parts advertise in RAINBOW.

The first thing you need is a project board. Radio Shack has dropped this item. I suggest you check RAINBOW's advertisements to find a board. I get my boards through CRC, but the board is available through other companies. At this time, the only tools you will need are a soldering iron and some solder.

It should take less than two hours to assemble this project. We will do it together, step by step. Don't start until you have all the parts. It's no fun to let a project sit, incomplete, because some of the parts are missing.

Before we begin, it is important to

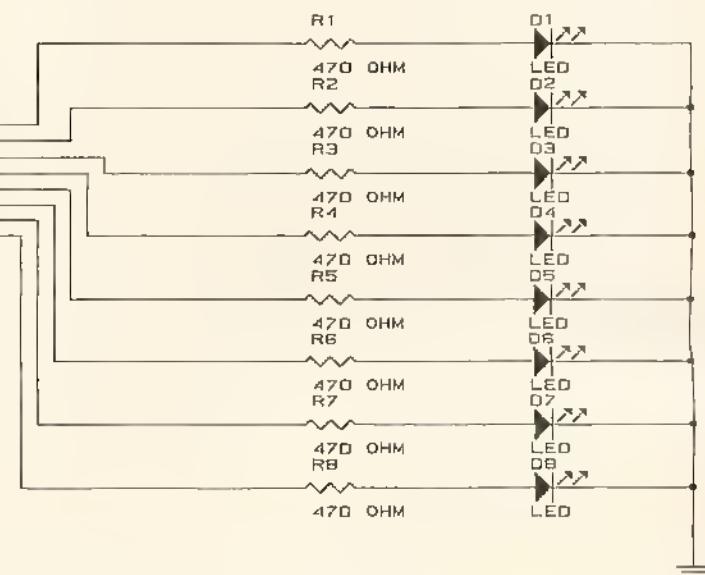

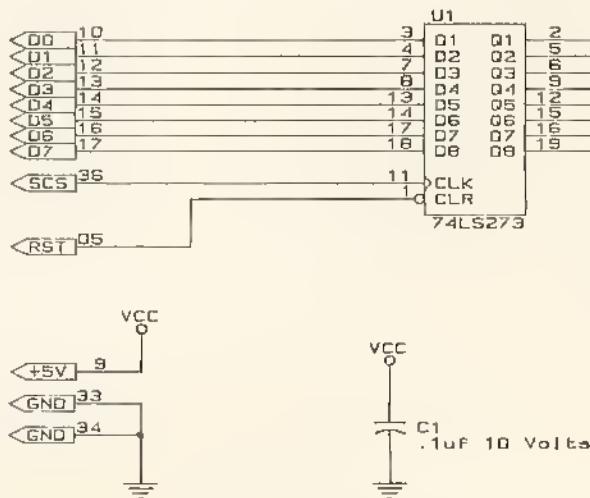

Figure 1

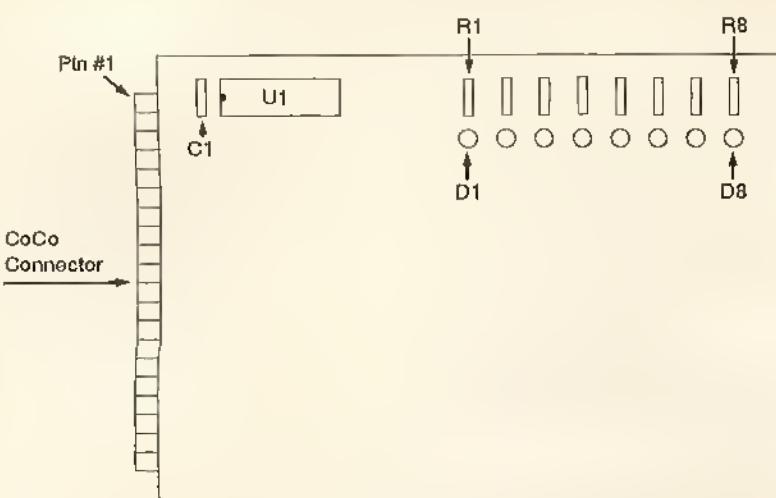

Figure 2

understand how a schematic diagram works. Look at Figure 1, and examine U1. The pin numbers are not drawn in any order. They are arranged so the diagram is easy to understand. All the inputs are one side, and all the outputs are on the other.

On the actual board, the pins are arranged in order. Begin with Pin 1, which is identified by a notch or dimple.

The next pin in a counter-clockwise direction is Pin 2. The other pins are in the same counter-clockwise order. The boxes on the left of Figure 1 are the pin descriptions for the CoCo's pin connector. The numbers above the wires are the pin numbers. Pin +5V leads to a box labeled VCC. That means every point in the diagram hooked up to VCC is really hooked up to that pin. This also applies

to Box GND. All points marked GND are connected.

While it is not obvious on this small diagram, the way the diagram is presented makes the schematic easier to read. Instead of wires everywhere, labels are used. (Please note: Though not marked on the diagram, U1 has a VCC at Pin 20 and a GND at Pin 10.

Now, let us begin the project.

First, put all the parts on a clean table. If you are using a CRC project board, make sure you have the right side up. A small #1 is printed next to Pin 1. This is the top. Pin 2 is directly below Pin 1. Pin 3 is next to Pin 1, Pin 4 is below Pin 3 and next to Pin 2, etc. All parts will mount on the top.

Mount the 20-pin socket in the top of the protoboard. For proper placement, follow the plan in Figure 2. Make sure that Pin 1 is the pin closest to the edge connectors. Solder all the pins of the socket, and mount the resistors and LEDs. Make sure that the short lead of the LED is positioned away from the resistors. They are polarized, and the short lead is the negative side. Bend the leads so that no part falls out. Insert the capacitor next to the socket, and bend the leads of this part as well.

## INTRODUCING THE WARGAME DESIGNER

**TAKE COMMAND!** Now you can create your own 1 & 2 player wargames and more. If you are into wargames, science fiction or Dungeons and dragons, you'll love the WGD system.

The completely menu driven system allows you to create your own full color Hi-res icons for units and map features. Take control of the number of units, strength, movement, turn of entry, range of fire, terrain modifiers and objectives. No programming required! WGD comes with a 23 page manual and 2 floppy diskettes in a rigid vinyl case with these four ready to play scenarios:

INVASION NORTH      a river crossing challenge  
ATTACK ON MOSCOW      a historic simulation 1941  
ROBOT COMMAND      a sci-fi thriller  
DUNGEON WARRIOR      save the damsel in distress

Complete WGD system ONLY \$29.00 Each scenario available separately with WGD system demo for ONLY \$10.00.  
COCO 3 128K Disk

## GRIDIRON STRATEGY

The FIRST and still the BEST 2 player football strategy game for the COCO 3 128K disk. Over 20 offensive plays and 10 defensive alignments. See the RAINBOW review 8/87. "...fascinating" Totally unique playing system! Disk, manual and playing aids only \$21.00.

## \$\$\$\$\$\$\$\$\$ WEEKLY WINNER 2.0 \$\$\$\$\$\$

A graphics oriented PROVEN WINNER! Features statistical analysis, intuition and luck. Manual contains little known facts about winning number characteristics. Works with all state lotteries all number combinations.

"I won \$90.00 the first time I used it." KJO, OH  
ONLY \$10.00

Orders shipped first class FREE within 24 hrs. of receipt.

SPORTSware 1251 S. Reynolds Rd., Suite 414, Toledo, OH 43615

The rest is just wiring. You know the pin numbers and positions. One at a time, solder a wire between the points in the schematic. Every time you place a wire, mark it off on the diagram. This serves two purposes: that you don't miss any points and that you don't try to do any point twice.

Let's do the first few together. Following the schematic, solder one end of the wire to Pin 10 on the connector. Cut the wire so that it just reaches Pin 3 of U1, and solder that end of the wire to Pin 3 of U1. Mark off this wire on the schematic. Next, solder an end of the wire to Pin 11 of the connector. Cut the wire so that it just reaches Pin 4 of U1, and solder that end to Pin 4. Mark off that wire on the schematic. Now finish off the rest of the wires one at a time. When you are finished, recheck all your work. Remember to check the VCC and GND of U1. Insert the 74LS273 into the socket, and make sure that Pin #1 is in the right place.

That's all there is to the hardware part of it. Plug it in, turn on your computer and check for the normal power-up message. If you do not, turn off the computer and check your work again.

Now that you have built it, let's see

how it works. Look at Figure 1. The main part in this project is U1, an eight-bit D-type flip-flop. All the D's are inputs and all the Q's are outputs. When the CLK input is strobed, the binary level on D is transferred to Q. Thus, if all D's were at Level 1 when the CLK was strobed, all the Q's (outputs) are now at Level 1. The D's are now at Level 0. The CLK that I am using is the CoCo's SCS pin. It is mapped at \$FF40 to \$FF5F. Since I am not using any address lines, mirroring will occur throughout this area. Next month, when we expand, I'll use the address lines to add more to this project.

Since they are all connected to identical circuits when any Q has 0 volts, no current can flow because the other end of the circuit also has 0 volts (GND). The LED is off. When any Q is high, roughly three to five volts, current flows through the resistor and the LED.

Since each LED is represented by one bit on the CoCo's bus, D0 on the CoCo controls LED 1, D1 controls LED 2, etc. Since it is memory-mapped on the CoCo's bus, a simple BASIC poke command will turn on the LEDs. Thus, if you type POKE &HFF40, 255, all the LEDs should go on. (Wow! It works.)

If it doesn't work, check all your wiring. Did you put all the LEDs in the right direction? Try reversing one and see.

If it is working, continue by typing POKE &HFF40, 1. Only one LED should be on. Now try typing 2 instead of 1, then 4, 8, 16, 32, 64 and finally 128. Each LED should light up, one at a time. Now try 72 (8 + 64). Adding two LED values together will cause both LEDs to come on. Use a FOR/NEXT loop to write a program that makes a chaser.

Those of you with Multi-Pak Interfaces must remember that the SCS pin is switched. In order to poke the values at \$FF40 in the right slot, you must change the slot access. You can do this by going into the all-RAM mode and turning the switch in front of the Multi-Pak to the project's slot. You can also make sure that your disk controller is in Slot 4, then put your project in Slot 1 and type POKE &HFF7F, &H30. This will change the SCS access to Slot 1 and leave the CTS, or DOS, access in Slot 4. Remember to return to &H33 before trying to access the disk.

In my next column, I'll expand this project to include more goodies that beep, boop and buzz.

# Sorting It All Out

**By William Barden, Jr.**  
Rainbow Contributing Editor

You wouldn't think sorting would be such a big deal on computers, would you? Alphabetizing a mailing list, arranging shapes in order of size, building an ordered word list — it just doesn't seem like a profound task. And yet, I'm sitting here with Knuth's *Sorting and Searching*, a 700-page book with fine print that discusses the various sorting methods. Although Knuth is a renowned computer expert, he doesn't write for the popular audience. (In fact, I haven't seen *many* descriptions of sorts that even an experienced programmer would understand.)

This column will attempt to describe four typical sorts so that average RAINBOW readers (*and* the author) can understand them. Fortunately, we can use CoCo graphics to our advantage in this situation. The programs I'm about to describe not only *sort* data, but they *display* the data on the CoCo screen as it is sorted. I was amazed to see just how easily the sorts can be visualized if you can, well, *visualize* them.

## A Row of 126 Sticks

Suppose that you have a row of 126 sticks of various sizes; some of the sticks may be the same size. How do you sort them? One way is to bundle them up, stand them on a flat surface, and pick the longest stick. This stick is then set aside, and the process is repeated for the next stick, and the next, etc. The process continues for all 126 sticks — 126 selections are made.

A computer sort can proceed the same way. However, the computer can't see all 126 sticks and pick out the longest.

*Bill Barden has written 27 books and over 100 magazine articles on various computer topics. His 20 years' experience in the industry covers a wide background: programming, systems analysis and managing projects for computers ranging from mainframes to micros.*

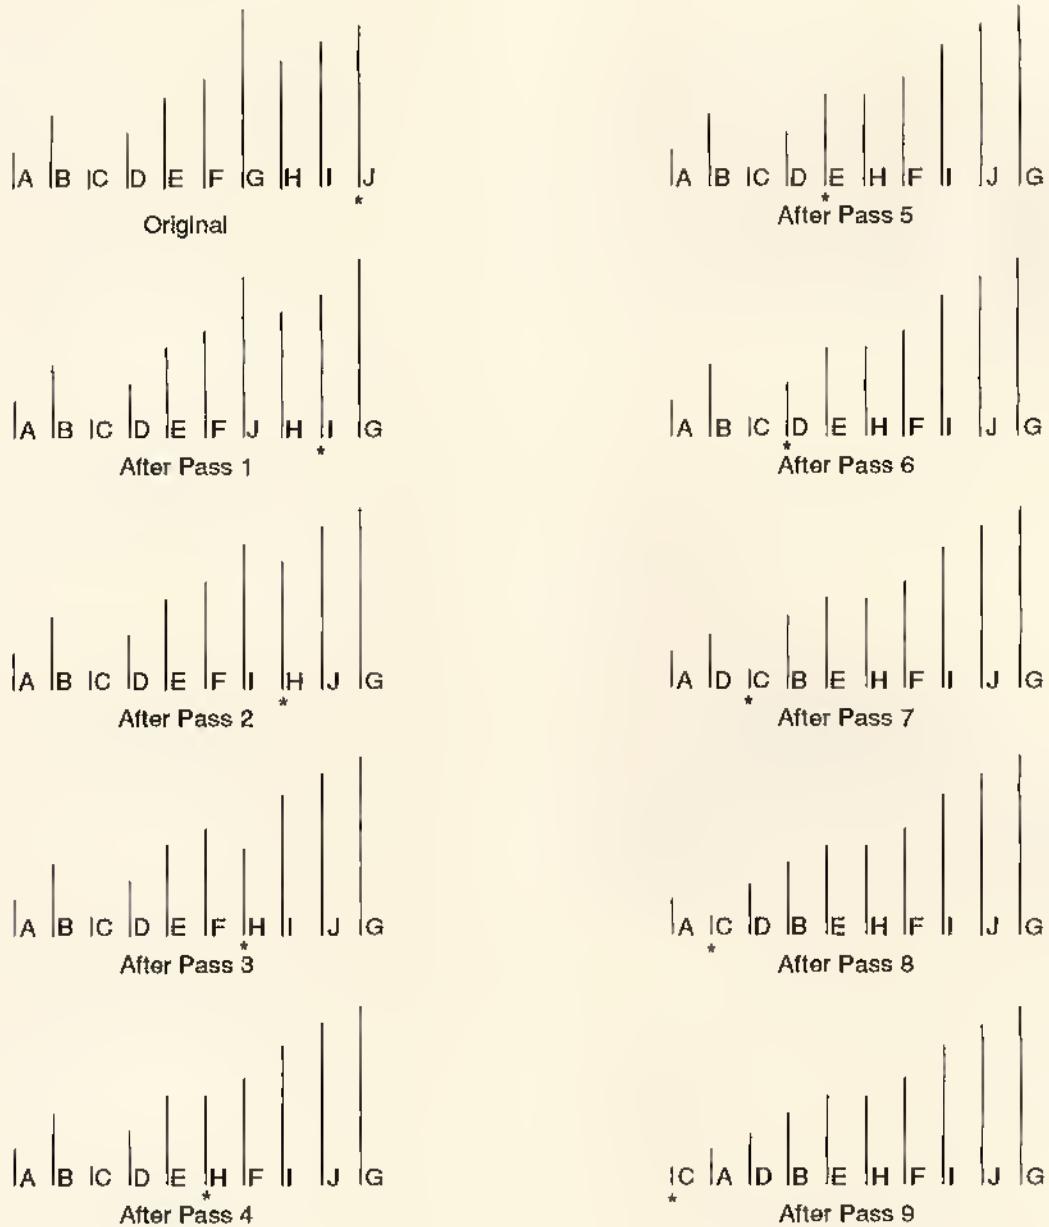

It must scan through all 126 sticks, and compare each new stick with one previously set aside as the longest. It's as if a friend were holding the sticks behind his back and handing them to you one at a time. You'd compare the new stick with the longest stick you had found so far, and save the new stick if it was longer.

## A Selection Sort

The Selection Sort is similar to the ease of the friend holding sticks behind his back. At the end of one pass through the sticks, the Selection Sort selects the longest stick. Let's see how it works.

Suppose that you have the 10 sticks shown in Figure 1 and want to place them in order, smallest to largest, left to right. First, assume that we have a pad and pencil on which we've noted the "largest stick" and its position — one through 10. We'll begin with an imaginary stick *smaller* than any in the pile and place it in Position -1. We will also note on the pad the last position of the row — Position 10. Moving from left to right, we will look at each new stick. If it's larger than the largest stick we've recorded, we make a note of its position. As we continue moving to the right, we compare each stick to the largest stick we have found. If a new stick is larger, it becomes the largest stick, and its position is noted on the pad. At the end of one pass, we have the position of the largest stick. We now exchange that stick with the stick in the last position. Position 10 now holds the largest stick.

Next, we use Position 9 as the last position and start the process again — examining the sticks in positions one through nine. At the end of this scan we have the position of the next largest stick, and we exchange this stick with the one in Position 9. Then we begin the process again, using Position 8 as the last position. Next we use Position 7, etc. Each time we complete the process, we add the next largest stick to the last position. It takes 10 passes to order the sticks from largest to smallest, left to right.

\* = Next Position

Figure 1: Selection Sort

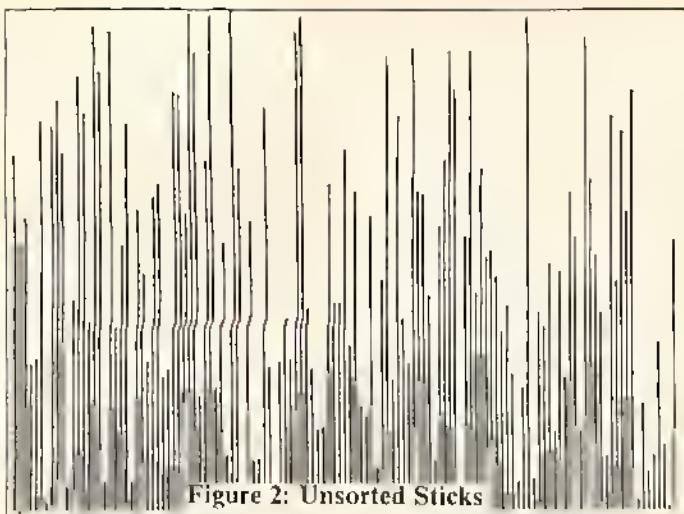

Figure 2: Unsorted Sticks

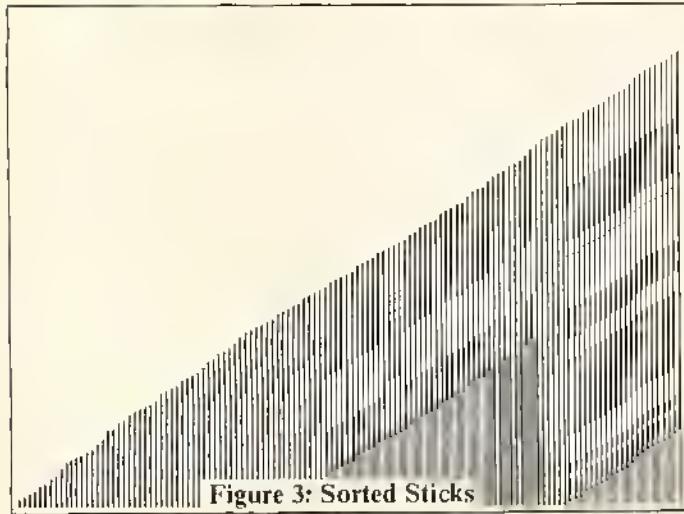

Figure 3: Sorted Sticks

### A Screen Full of Sticks

We've simulated a pile of sticks on the CoCo screen, as shown in Figure 2. The BASIC LINE command has been used to generate 126 randomly-sized sticks across a 256-by-192 resolution screen. The sticks are placed in alternating columns so that you can differentiate between individual sticks and so that a border can be maintained around the screen. (We could have used any number, but 126 was convenient.)

The lengths of the sticks are stored in Array NO, a 126-entry numeric array. The values in NO correspond to the length of each stick.

### Selection Sort Mechanics

The Selection Sort program is shown in Listing 1. The first portion generates the sticks on the screen; the middle portion is the actual sort; and the last portion displays the swapped sticks.

In the program, Variable J is the position of the last stick. It begins as Position 126 and ends as Position 1. Imagine this position changing as smaller and smaller sticks move from the rightmost to the leftmost position. As the pass progresses, Variable LS will hold the value of the largest stick. The initial value of LS is -1. Because every stick is larger than this, it's guaranteed that there will be a new largest stick at the end

of the first pass. Variable SI records the current position of the largest stick. Its initial value is also -1, an illegal value, but this will be changed to a legitimate value by the end of the first pass.

The main loop in the sort is Line 220. The stick lengths from NO(1) through NO(J) are compared to the largest stick in LS. Any stick larger than the value in LS replaces the LS value. Its position is then stored in Variable SI. At the end of the pass, SI holds the position of the largest stick — NO(1). This stick is then swapped with NO(J). The process continues as the value of J decreases by one with each pass.

(After each pass, the two line display subroutines clear the two stick lines involved and then rewrite the exchanged lines.)

Keep your eye on the largest stick while running this program. It will be swapped with the stick in the last position. You'll see progressively smaller sticks being placed from left to right as the sort is done. The result of this sort is shown in Figure 3. The *Selection Sort* program takes about 1½ minutes on a CoCo 2.

### Bubbling Away

The Bubble Sort is another popular sort. It's similar to the Selection Sort. At the end of one pass through the sticks, the Bubble Sort selects the longest stick. However, it may also exchange other sticks, partially ordering them. Let's see how it works.

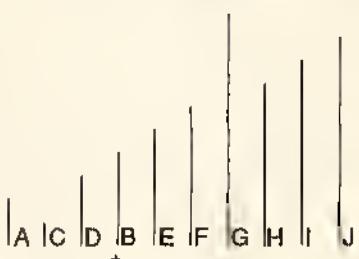

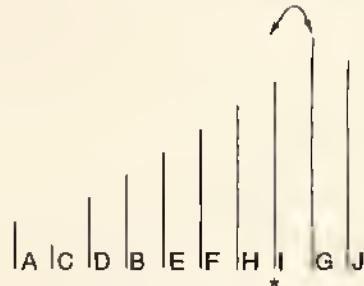

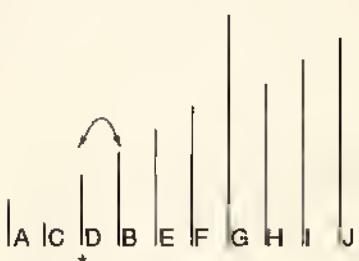

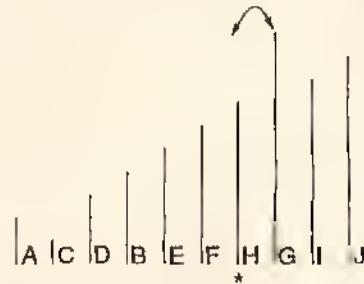

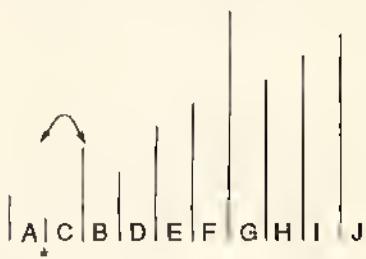

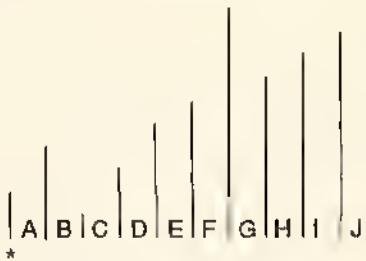

Imagine that we have the same 10 sticks shown in Figure 1 and that we still want to order the sticks from smallest to largest. Moving from left to right, we look at a pair of sticks. We first compare sticks 1 and 2. If Stick 1 is larger than Stick 2, the sticks are swapped. Next we compare sticks 2 and 3. If Stick 2 is larger than Stick 3, the sticks are swapped. Moving down the line, we will make nine comparisons — the last one is a comparison of sticks 9 and 10.

At the end of the pass through the 10 sticks, what do we have? Since we swapped sticks each time the first stick in the pair was larger than the second, we find that the largest stick has "bubbled" down the line to the last position, Stick 10. The remaining sticks may be sorted, but probably aren't, although some sticks have been moved toward their correct position. We can now repeat the procedure for the remaining nine sticks. At the end of this pass, the next largest stick occupies Position 9. Eight more passes will guarantee that all sticks have been sorted. Of course, when no swaps are made during a pass, then the sticks have been sorted, even if 10 passes have not been made. The first pass is shown in Figure 4.

The *Bubble Sort* program is shown in Listing 2. Like the *Selection Sort* program, the screen is first filled with 126 sticks. The middle portion is the actual Bubble Sort. The last portion displays the swapped sticks and is similar to the line display subroutines in Listing 1.

If you run this program you'll see the swapping taking place as a dark line that moves across the screen. Each time the dark line appears, two adjacent sticks are being swapped. As the sort progresses, longer sticks build up on the screen right, one stick being added for each pass through the sticks. As the screen becomes sorted, you'll see fewer and fewer swaps being made.

The sort portion of the program uses two variables. Variable J always points to the last entry in the list. J starts at 126, the last screen line, but decreases by one for each pass. Variable I is the current location of the stick as a pass is made from Stick I to Stick J. Swaps are made by swapping stick

`NO(1)` and `NO(I + 1)`. A swap flag, held in `SW`, is set to 1 if a swap occurred. The sort ends when `SW = 0` after a pass (no swap occurred) or `J` reaches 1.

Although the logic for the Bubble Sort is easy, it has one big disadvantage — it's slow for unsorted data. The sort in Listing 2 takes about 3 minutes to sort a screen of 126 sticks (values) when random stick lengths are used and screen graphics are not updated. When screen graphics are updated, the sort takes about 16 minutes. On the other hand, the sort is almost instantaneous when the data is sorted and very fast when only a few values are out of order. By comparison, the Selection Sort would slog through all 126 passes!

### The Shell Game

Why is the Bubble Sort so slow? Although you can think about it abstractly, it's obvious from the screen — it takes many passes to move a stick that's out of order across a whole screen, and there are many sticks to be moved. It would be nice to bypass the tedious swapping and just throw the sticks in about the right location based upon length. You could then do a more detailed sort after the sticks were approximately arranged in order. This is the idea behind the *Shell Sort* program, shown in Listing 3.

The first part of the *Shell Sort* program generates the same type of random data as in the two preceding sorts — 126 sticks with values in array `NO()`. The line display subroutines are at the end, as in the previous program. The actual shell sort is in the middle of the program.

The Shell Sort is more complicated than the Bubble Sort but is about five times faster — the program taking about three minutes instead of 16. This sort is *much* faster than the

Selection Sort when the screen data is not updated (*Selection Sort* only re-draws 126 pairs of lines, but *Bubble Sort* and *Shell Sort* re-draw the lines constantly). A sort utility would not waste time displaying the sort data as we are doing.

The operation of the Shell Sort is obvious from the screen. The program uses an *increment* that spans the width of sticks. The increment begins at half of 126 — 63. Using this increment, sticks 1 and 64 are compared, and swapped if they are out of order. Next, sticks 2 and 65 are compared and swapped if out of order. This process continues until sticks 63 and 126 are compared. The pass is like the Bubble Sort — but with gaps. At the end of the first pass, many sticks have been moved approximately to the proper position. If any swaps occurred, the same increment — 63 — is used again. The increment of 63 is maintained until no swaps occur.

Next, the increment is divided approximately in half, to 31 (fractional values are not meaningful here, so a BASIC INT function is used to find the next lower integer value for the increment). Now the width of sticks are scanned again — a Bubble Sort of four items (i.e., Stick 1 is compared to Stick 32, Stick 32 to 63, Stick 63 to 94 and Stick 94 to 125). At the end of this pass, the smallest stick has been moved to Position 125. The increment of 31 is maintained until no swaps occur.

Now increments of 15, 7, 3 and 1 are used to further sort the data. The increment of 1 is really a Bubble Sort, but at this point most of the sticks have been positioned near their proper positions and the sort is much faster. The sort is over when the increment has been reduced to 0.

## NEW FOR OS-9™: *FORTH09*™ from D. P. JOHNSON

**FORTH09** is a FORTH-83 Standard implementation specially tailored for OS-9. Includes the double number extension word set, system extension word set, complete forth 6809 assembler and more. Programs written in forth can instantly be saved as compact executable machine language modules. The FORTH09 system runs on any level I or level II OS-9 (6809) machine with at least 32k of available memory and one disk drive. Saved Forth09 application code is romable, reentrant and fully position independent, requiring as little as 3k for a small program. Where maximum speed is required the user can force small code words to be automatically compiled as in line code rather than subroutines. Supplied with complete printed documentation. \$150.00 (+ \$3 S&H) Specify disk format if other than CoCo OS-9 format desired.

### Other OS-9 SOFTWARE from D. P. JOHNSON

**L1 UTILITY PAK** - Contains 40 useful utilities that run under both level I and II OS-9. Included are a complete set of "wild card" file handling utilities, a disassembler, a disk sector editor, and the MacGen command language compiler. MacGen will allow you to generate many useful command macros in minutes, much more useful than procedure files. Macro source is included for a macro to implement an archival backup type function. \$49.95

**L2 UTILITY PAK** - Contains a Level II "printerr" function that also shows the pathname being searched for when "not found" or permission type errors occur. Also contains level II software ram disk driver. Ten other utilities included, some useful for level I also. \$39.95

**L1+L2 COMBINATION PAK** both of above together for \$75.00

**SDISK** - Standard disk driver module replacement allows full use of 40 or 80 track double sided drives with OS-9 Level I. Full compatibility with CoCo 35 track format and access all other OS-9 non-CoCo formats. Easy installation. \$29.95

**SDISK+BOOTFIX** - As above plus boot directly from a double sided diskette. \$35.95

**SDISK3** - Level II version of SDISK driver. Same features as level I (except bootfix not required to boot from double sided). \$29.95

**PC-XFER UTILITIES** - Programs to format and transfer files to/from MS-DOS™ diskettes on CoCo under OS-9. (Requires either SDISK or SDISK3 to run depending on which level of OS-9 you are using) \$45.00

**MSF** - MS-DOS disk format file manager. More complete file transfer capabilities for level II only. (Requires SDISK3 to operate).

Now supports 720K 5 1/4" and 3 1/2" MS-DOS Formats. \$45.00

MSF+SDISK3 together \$65.00

All diskettes are in CoCo OS-9 format unless otherwise requested; other OS-9 formats can be supplied for \$2.00 additional charge. All orders must be prepaid or COD. VISA/MC accepted, add \$1.75 S&H for first software item, + .25 for each additional item, additional charge for COD.

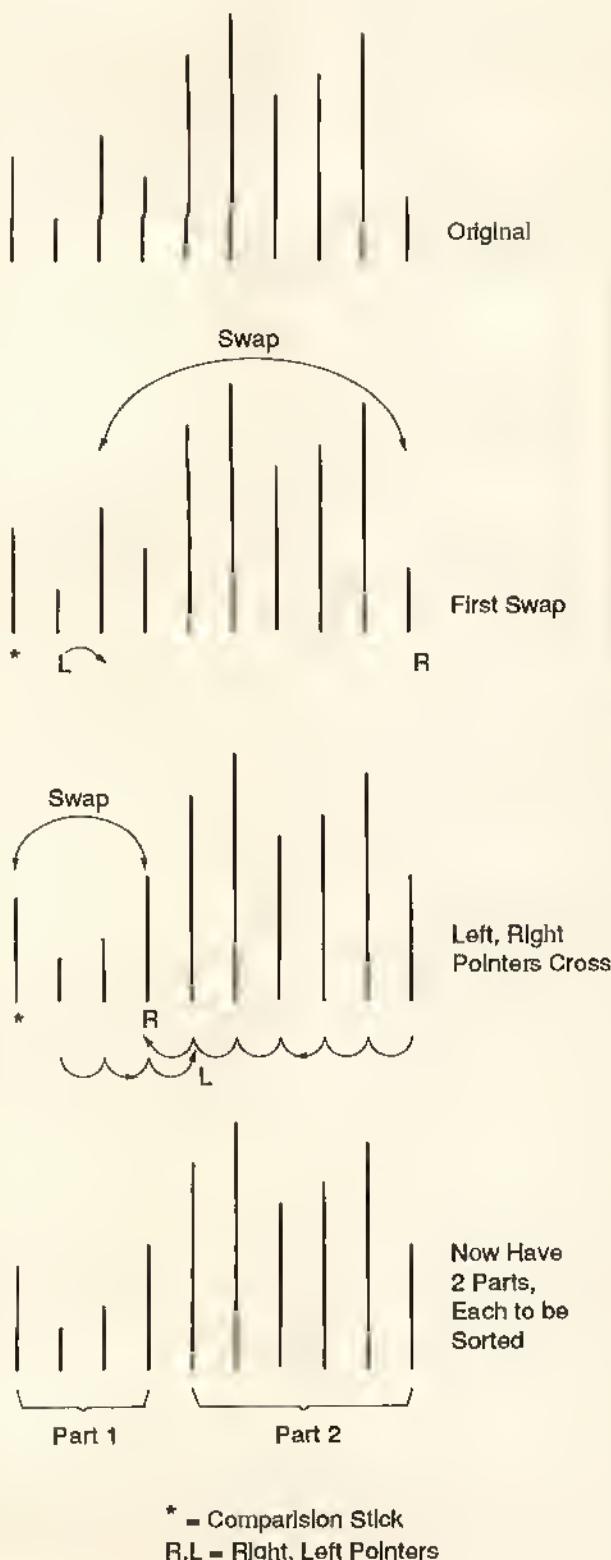

Figure 6: Sample Quick Sort Pass

The process is shown for an eight-stick row in Figure 5.

In the program, Variable IN is the increment, ST is the starting location, EN is the ending location and I is the current location within the range.

#### A Quicker Sort

The quickest sort of all for random data (when screen graphics are not considered) is the Quick Sort. It's more complicated than the Shell Sort, but it sorts screen data in about 45 seconds when graphics are not used and 90 seconds when graphics are used.

*"I've seen the Acropolis by moonlight and Los Angeles through the haze, but I'll have to say that the Quick Sort display is really beautiful to watch — not so much in an aesthetic sense, but beautiful in a logical sense."*

The Quick Sort works like this: Start with a row of 10 sticks again. Now choose the first stick in the row and note its length. The row is now divided into two parts — left and right. Sticks in the left part are of lesser or equal length to the comparison stick and sticks in the right part are of greater length. The sticks are ordered by moving down the row in both directions at the same time. The sort keeps moving from the right until the first stick shorter than the comparison stick is found, and keeps moving from the left until the first stick longer than the comparison stick is found. Those two sticks are swapped, and the sort continues until the comparison has reached the middle of the sort. The comparison stick is then swapped with the last entry of the left portion. A sample pass is shown in Figure 6.

Any stick in the left part is definitely smaller than any stick in the right part. However, within each part, the sticks probably aren't ordered. Now each part is considered separately. The whole process repeats again for the left part. The first stick is used as a comparison stick and the left part is further subdivided into two parts — the left part holding all sticks smaller than the comparison stick, and the right part holding all sticks larger than the comparison stick. The same process is repeated for the right part.

This division into parts continues until each part holds two units. In a 126-stick set, for example, there will be about 63 parts. The beauty of the sort is that sticks are moved over great distances and put into rough order without a lot of overhead.

The main problem with a Quick Sort is that a record must be kept of each part — the position number of the start and the position number of the end. This record keeping calls for a list or array of items. After each sort of a part, the list is used to find unsorted parts, which will then go through the process and generate new parts. A sample of a Quick Sort of a 10-item list — including a record keeping list — is shown in Figure 7.

The Quick Sort program is shown in Listing 4. The

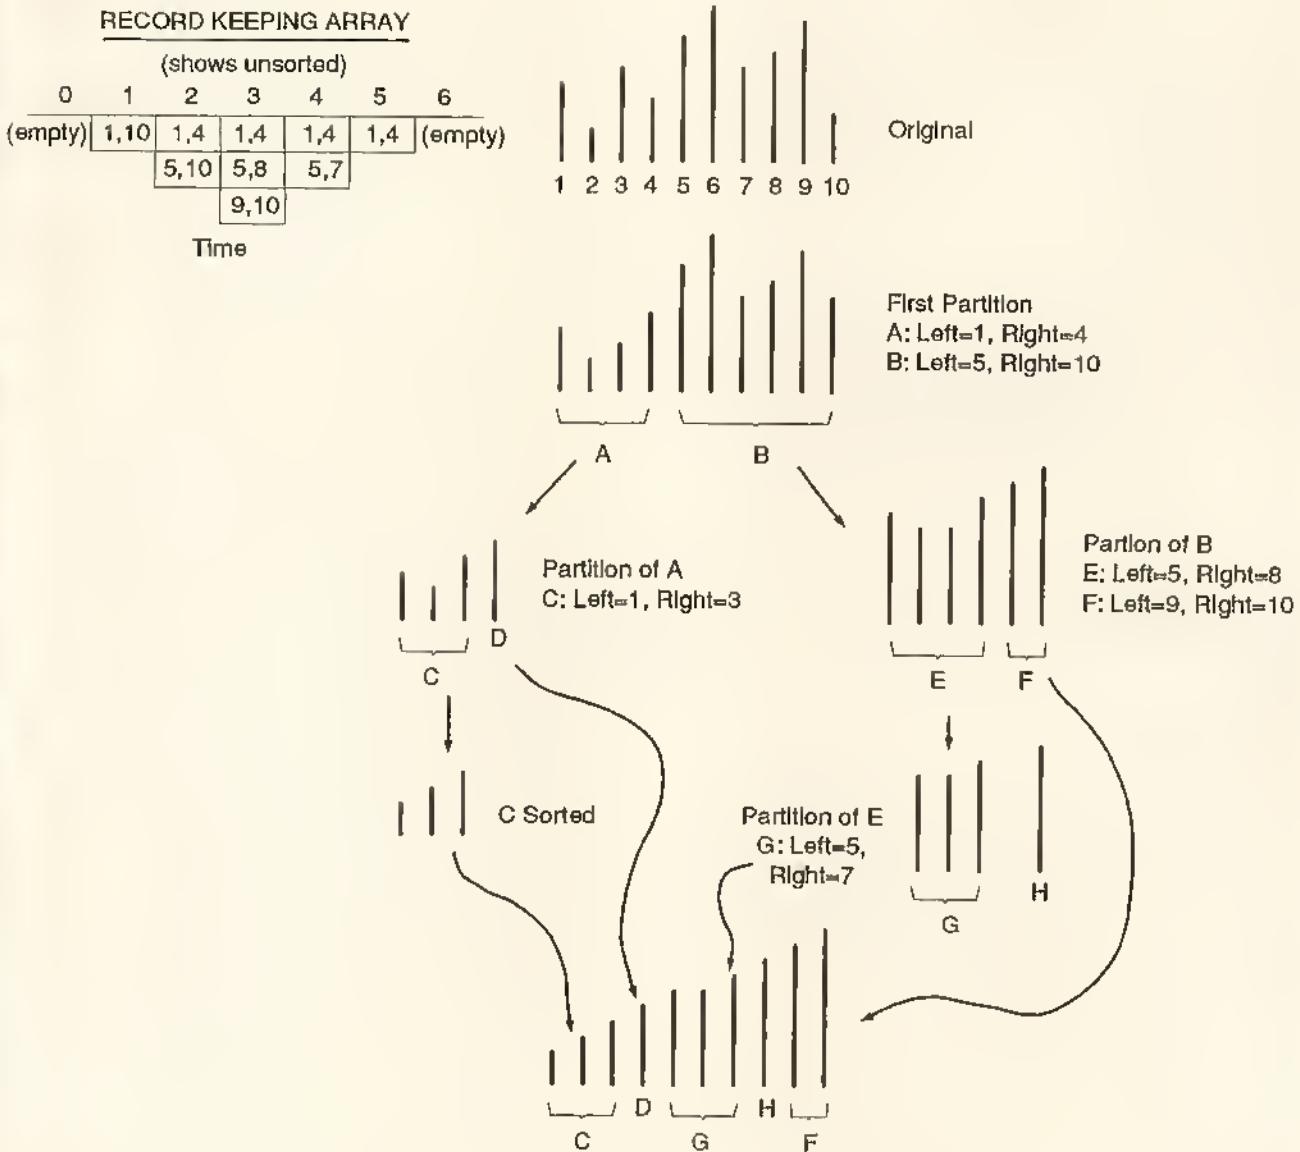

Figure 7: Quick Sort of a 10-Stick Row

generate data code is identical, and the line display subroutines are similar, to the other sorts. The actual sort code uses a housekeeping array, LS. The first value of the array — LS(0) — is a pointer to the next available location in the array (see Figure 8). Two values at a time are put into the array — the left- and right-most stick positions. There may be many different sets of these, defining both large and small parts. As parts are sorted, two new parts are created, and the end points of each of these are put into the LS array. End points are taken out two at a time to start a sort process. The sort loops back looking for new parts to sort. When LS(0)=0, all parts have been sorted.

Variables ST and EN are the starting and ending positions for a part. Variables LP and RP are the pointers to this part and move in from the left and right.

#### Another Computer Nerd

I've seen the Acropolis by moonlight and Los Angeles through the haze, but I'll have to say that the *Quick Sort* display is really *beautiful* to watch — not so much in an aesthetic sense, but beautiful in a logical sense. You can easily visualize the sorting process dividing the sticks into parts, sorting those parts, getting new parts from the record keeping list and sorting them, and finally working on very small increments. I hope there are enough CoCoists out there to share my enthusiasm. Let me know if you enjoy it.

See you next month with more CoCo topics. □

#### PREMIUM COCO3 512K UPGRADE

Made in USA by J&R Electronics • Memory chips socketed, user replaceable  
• Rugged, long life construction • Top mounted Memory for cooling  
• Heavy duty POWER and GROUND planes to minimize memory errors due to noise  
• High performance design, permits use of less expensive 160ns memory chips  
• We supply Prime memory chips, not inferior pulls or fallout's  
• Includes RAMDISK, Spooler and Memory Test software on disk with 28 page User's Manual (We sell the standard for 512K support software. We believe our software is uniquely powerful, as opposed to these 'Me, too' companies that charge extra for software with much less power!)

## HDS Floppy Drive Controller Board

### FEATURES:

- Gold Plated Edge Cards
- Dual Selectable ROM Sockets
- Compatible With All COCO Versions
- One Year Warranty

**HARD DRIVE SPECIALIST** has manufactured floppy drive controllers for the Color Computer for SIX years. Buy the controller alone to upgrade your present drive system, or purchase a complete ilive 0 to get a high quality drive system loaded with features. This controller allows the use of either two 24 pin ROMS, or one 24 pin and one 28 pin ROM. Using this board with the standard Radio Shack ROM gives you 100% compatibility with all Radio Shack software.

# Boot Mysteries Revealed

By Richard A. White  
Rainbow Contributing Editor

I have talked about the OS-9 players — the program modules that manage the computer's operation and the specific data files (generally called descriptors) that provide the operating system with the information it needs to work. I have also mentioned that OS-9 can be configured to match your exact system hardware. System configuration is determined by the modules loaded at OS-9's start-up. These modules are included in the Kernel, located on Track

One of the Kernel's functions is to initialize the system and then load OS9Boot. Since the CoCo 3 is different from the CoCo 1 and 2, one would expect the Kernels for the machines to be different. This is partly true. The OS-9 Disk Operating System (Radio Shack, Cat. No. 26-3030) is Level 1, Version 1 for CoCo 1 and 2s and will not work on CoCo 3s without modification. A Level 1, Version 2 upgrade (special order, Cat. No. 700-2331, \$24.95) works on the CoCo 3, but it cannot take advantage of more than 64K of memory or support CoCo 3 graphics. Level II, on the other hand, uses up to 512K of RAM in a CoCo 3 and uses all its graphics features. Level II will only work in a CoCo 3, and it is rather limited in a 128K

machine. However, it really shines in a 512K machine.

As you might expect, the Level II Kernel is quite different from the Level I versions. There are changes to other operating system modules as well. The modules to handle the keyboard and screen are new. The disk drive manager, CC3Disk, is also new and now handles any double density drive (single- or double-sided, 35-, 40- or 80-track) you want to connect to your system. Consistent with OS-9's design philosophy, which keeps modules transportable between versions whenever possible, most of the other modules are the same as in Level I.

So the first configuration choice you must make is between Level I and Level II. (It's not much of a choice. Level I on a CoCo 3 is a waste of capability.) This is also the only choice that you can buy from Radio Shack. You must use OS-9's utilities to install all other options yourself. OS-9 Level I and Level II both come on single-sided, 35-track disks. Most users can put the System Disk into Drive 0, type DOS and let the computer boot into OS-9. A few users with older drive controllers will have trouble.

Disk Extended Basic Version 1.0 does not support the DOS command. A short program is provided in the documentation of Radio Shack's OS-9 package that creates a machine language loader. A more costly problem occurs with old, long black controllers sold from 1982 to 1984. Most of these cannot reliably handle the 1.8 MHz CoCo 3 clock speed. This problem is particularly

nasty because the controller will *almost* work reliably. But almost isn't good enough, and the only safe solution is to replace the controller.

Next, let us consider what happens during the boot. Generally, this information is not discussed, or it is placed under "technical information" where few will bother to read it. It is technical information, but making a new boot is a technical operation — particularly under Level II. The more knowledge you have about the operation, the less confusion you will encounter. I have wandered through my share of OS-9 fog, and I speak with authority. Don't let this scare you. I survived and so will you. After all, if you learned to walk and talk, you can learn to make a boot file.

The DOS command under Disk BASIC causes the code on Track 34 to be loaded and executed. (Since track numbering begins with zero, Track 34 is the 35th track.) Under Level I, this code consists of two modules: OS9 and OS9p1. The Level II code includes three modules: REL, Boot and Os9p1. In both cases, these modules initialize the machine, complete the boot operation, link to all the other system modules as they are loaded, and provide basic system services (i.e., memory management and multitasking).

## Merging Files

Completing the booting process includes loading the OS9Boot file. This file merges all the system modules to be used. Merging files is a particularly useful tool under OS-9 — especially

---

Richard White lives in Fairfield, Ohio, has a long background with microcomputers and specializes in BASIC programming. With Don Dollberg, he is the co-author of the TMS database management program.

under Level II. Understanding the operation can be quite useful, so make the effort to learn the process.

A normal OS-9 file starts at the beginning of a sector (256 bytes) of a disk. The file's end will use part of another sector, the remainder of which is wasted. When a number of files are merged into a single new file, each merging file follows immediately after the preceding file. No space is lost. A directory will list the new file, but not the names of the files it contains. Because these merged files still maintain their individual identities, the *Ident* utility will show the header information for each file contained in the new one. With your system disk in */d0*, type *ident /d0/OS9boot*, and you will see what I mean.

When you load a file into memory, OS-9 starts that file at the beginning of a 256-byte page under Level I or at the start of an 8K block under Level II. Therefore, if you load three 1K files individually under Level II, you will use 24K of memory. Memory is too dear for this kind of waste.

A merged file starts loading into memory like any other file — at the beginning of a page or block. However, the files it contains are loaded immediately following each other in memory. Page and block boundaries are disregarded. Considerable memory is saved — especially with device descriptors, which typically use only 50 to 80 bytes. Since many OS-9 utilities are small, merging five, 10 or even 15 files into a single file allows those files to be placed in one 8K block. Even those of us with 512K CoCo 3s enjoy this memory saver.

So *OS9Boot* is simply one file into which all the system modules you will use are merged. The code that loads *OS9Boot* is rather simple, too. Consequently, make sure that *OS9Boot* is not divided into a number of places on your

disk (OS-9 will split up a file if need be to make best use of disk space). When you make a new boot disk, use a freshly formatted disk to avoid this problem.

### Shell

Under Level I, everything OS-9 needs should be included in *OS9Boot*. Once *OS9Boot* has been loaded, run the *StartUp* file. *StartUp* is a text file that contains commands you could have typed in at the OS9 prompt. Files of this nature are sometimes called procedure files or shell scripts.

*Shell* is a program that allows the computer to interpret any command entered into it. The logical people who wrote OS-9's interpreter named it *Shell*. OS-9's *Shell* normally takes its input from the keyboard, but it can take it from a text file as well. Think of all the commands that you can type at the OS9 prompt as a language. A text file of those commands would be like a program. In fact, Level II has a rich selection of graphics commands that can be entered at the OS9 prompt using *Display*. You could write a large text file of *Display* commands and generate a full-color picture, complete with text, using no "language" other than OS-9. The *StartUp* file can get quite long, particularly under Level II.

Under Level I, *Shell* is normally included in *OS9Boot*. This option uses the least memory. A different strategy applies under Level II. *Shell* is more a utility than a system module, and it does not need to be in the *OS9Boot*. No matter how much memory is in the computer, a 6809 microprocessor can deal with only 64K at a time. The CoCo 3 and OS-9 manage memory by switching 8K blocks in and out of the microprocessor's 64K "work space." If *Shell* is loaded separately from *OS9Boot*, it does not have to be in the "work space" at the same time as the boot modules.

In this manner, the boot can contain other modules that need to be there. Thus, under Level II, *Shell* is loaded separately with a command included in the *StartUp* file and does not need to be in the *CMD5* directory of your boot disk, if a full path to it is provided in the *StartUp* file.

While *Shell* is less than 2K bytes, the *Shell* file supplied on the Level II system disk is really a merged file that includes several other frequently-used utilities, which almost fill an 8K block.

Another point at which Level II differs from Level I is the video and keyboard area. To take full advantage of CoCo 3 graphics and text options, additional code was needed. This code was divided among several modules. One such module, *GrfDrv*, is loaded separately and is not included in *OS9Boot*. *GrfDrv* is loaded immediately after *OS9Boot*, before the *StartUp* file. Consequently, it must be in the *CMD5* directory of your boot disk.

At this point, we know some of the things that must be on a boot disk. The Kernel must be on the 35th track on the front of the disk. On a single-sided disk, this is Track 34. On a double-sided disk, OS-9 counts the first track on the front as Track 0, the first track on the back as Track 1, etc., toward the center of the disk. In this case, Track 34 is not on the 35th top-side track. However, Disk BASIC does not know about double-sided disks. When you boot from a double-sided disk, it looks at the 35th top-side track for the Kernel. Boot-making utilities provided with Level I assume you are using single-sided disks and do not properly deal with double-sided disks even if you have replaced your standard disk I/O driver with one that uses double-sided disks. On the other hand, Level II utilities handle double-sided disks properly. In this case, the utilities provided with Level II

## Check Account Information System

Not just another checkbook program but a user friendly, menu driven, disk based information system. Keep track of deposits, checks, ATM withdrawals and other account transactions. Define up to 36 categories to monitor expenses. Set up automatic transactions for such items as direct deposits and deductions. Balance your account(s) in minutes! Other features include multi-drive capability, display and print options, check search on any field, edit and delete capability and more.

are different from those of the same name in Level I.

The DS9Boot file must be a continuous file in the root directory. A StartUp file must also be in the root directory. There must be a CMDS directory on a Level II boot disk. GrfDrv and the Shell file must also be available for loading when the StartUp file runs.

The simplest way to make a new boot disk is to back up the one you already have. Naturally, you will have followed the directions in the documentation and backed up the operating system disk that comes with your OS-9. Right? Whenever you make a new boot disk, back it up as well.

Next you can use the program, Cobbler. Cobbler uses the system modules as they exist in memory at the time to make a new boot disk. Start with a freshly formatted disk. Cobbler will then copy the Kernel modules to the 35th top-side track and put all other modules loaded from DS9Boot into a new DS9Boot. The primary purpose of this program is to save changes made to descriptors with Xmode.

Most users will need to change /t1, /t2 and /p from their defaults to match their current setups. /t1 and /t2 describe how the RS-232 ports work. One default setting is 300 baud. Most of us now use 1200 baud for telecommunications, and some use 2400 baud. If you want to run at a baud-rate higher than 300, include an Xmode command in your StartUp file to change /t1 or /t2 each time you boot. Similarly, few of us still run our printers at the 600-baud default. This can be changed by using Xmode on the /p descriptor. However, these changes only last through the current session and are lost as soon as you turn off your computer. When you use Cobbler to make a new boot disk, the descriptors in DS9Boot will include the modifications made using Xmode, so you can eliminate the Xmode steps from your StartUp file.

### Using Dsave

The boot disk you make with Cobbler contains only the Kernel and DS9Boot. You must also add the remaining directories and files on your starting boot disk. To do this, use Dsave, which will copy or back up all files in one or more directories — including a whole disk. Dsave will not copy DS9Boot unless that option is specifically selected.

In addition, Dsave does not directly copy files; it makes a procedure file that you later run to do the job. There are a number of advantages to this proce-

dure. You can edit the procedure file and eliminate copy commands for files you don't want to copy or add copy commands for files you want to copy from a disk in a different drive. Additionally, the copy or backup does not depend on the source and target disks being the same. Use this procedure file to make the 35-track system disk from your OS-9 package a double-sided 40-track boot disk, or to move the contents of a boot disk — excluding the Kernel, DS9Boot and GrfDrv — to a hard drive. To boot, most hard drive users load the Kernel, DS9Boot and GrfDrv from a floppy in /d1. After the initial loading, OS-9 discovers an /h0 device descriptor and automatically continues the boot procedure from the hard drive.

When using Dsave, change your data directory to the one you want to copy. (The term *one or more directories* can mean a whole disk, since Directory /d0 is the root directory of the disk in Drive 0, and all files and subdirectories on that disk are under the root directory.)

Next, determine which Dsave options you want to use. The only one we need to consider now is the 's' option. The format for this option is -s *integer*, where *integer* is the amount of memory, in kilobytes, you want to allocate to the copy process. The entry, -s20, will allocate 20K bytes, which will handle nearly all files on a boot disk. Now you may want to decide to which drive (and, possibly, to which directory on that drive) you want to copy. Finally, you need to name the procedure file Dsave will make and choose the drive and directory on which it will be stored.

Now, let's see how Dsave works. First, use Cobbler to put the Kernel and DS9Boot on a freshly formatted disk. Put the Level II system distribution disk in Drive 2. (Generally, you will find it more convenient to have your source disk in Drive 0.) Putting the disk in Drive 2 will better demonstrate the flexibility of Dsave. Next, type the following:

```
DS9: chx /d2/cmds  
DS9: chd /d2  
DS9: dsavc -s20 /d2 /d0 >/d2/  
      makecopy
```

Because the process requires the use of several program modules, the first line is used to change the current CMDS directory to /d2. The next line puts you in the root directory of /d2, from which you want to copy. The final line enters the Dsave command. Option -s20 tells Dsave to have Copy allocate 20K bytes

of buffer for each copy operation. The descriptor, /d2, reminds Dsave that you want override the built-in /d0 default and copy from Drive 2. The descriptor, /d0, tells Dsave to copy to drive 0 and to include a chd /d0 line in the procedure file. Finally, >/d2/makecopy directs the resulting procedure into a file named makecopy on /d2. The following is a shortened version of the resulting procedure file:

```
t  
chd /d0  
tmode .1 -pause  
load copy  
Mkdir CMDS  
Chd CMDS  
Copy #20K /d2/CMDS/attr attr  
Copy #20K /d2/CMDS/backup  
      backup  
. .  
. .  
Copy #20K /d2/CMDS/unlink  
unlink  
Copy #20K /d2/CMDS/xmode  
xmode  
Chd ..  
Mkdir SYS  
Chd SYS  
Copy #20K /d2/SYS/errmsg  
      errmsg  
. .  
. .  
Copy #20K /d2/SYS/stdptrs  
stdptrs  
Chd ..  
Copy #20K /d2/startup start-  
      up  
. .  
. .  
Copy #20K /d2/makecopy make-  
      copy  
unlink copy  
tmode .1 pause
```

In this file, t is a shell command that tells Shell to display each line in the procedure file on the screen so we can keep up to date on what is happening. Tmode .1 -pause tells Shell not to stop the display and the procedure after a certain number of lines are printed to the screen. The Shell default stops printing so you have time to see what was displayed and press ENTER to continue. The .1 refers to the standard output to your screen. (Note at the bottom of the listing, Tmode .1 pause returns the pause feature.)

Next is a Load Copy command. Since Copy is used so often, it saves time to

load it once and unlink it at the end of the procedure. If Copy is already loaded, the Load command increases its link count by one, and Unlink decreases the link count by one. Copy stays in memory. Next, Makdir CMDS creates a CMDS directory. Dsave's default assumes that none of the needed directories on the target disk exist and that it will have to include commands to make these directories. This is exactly what we need here. The procedure file has used four OS-9 utilities: Tmode, Load and Makdir, which must either be in memory or in your current CMDS directory, and Copy. (Since the line Load Copy is used, OS-9 will try to load it from your CMDS directory whether it is in memory or not, so you must have Copy in your CMDS.) At the end of the procedure file, Unlink is used so it must be in memory or in the CMDS directory as well.

Having made a CMDS directory, chd CMDS makes that the current data directory and copying begins. Each Copy command includes #20K, which tells the program to use a 20K-byte buffer. We used the option -s20 to instruct Dsave to include this. Since /d0/CMDS is the current data directory, Dsave includes

a full path (i.e., /d2/CMDS/attr) to the file to be copied; but since the file is being copied into the current data directory, Dsave needs only to provide the target file's name.

Most of the rest of the procedure file, except for Chd . . ., is repetitious. The ". ." is shorthand for "previous directory above the current one." When I started Dsave, my current data directory was /d2. Since the disk in /d2 is the one I want to copy and I saved the procedure file, makecopy, onto that disk, I need only to put my target disk into /d0, type makecopy to start the procedure file, and get a drink or do something else while the process takes a few (long) minutes to run.

If you think this is easy, there is a better shortcut for those who don't want to edit the procedure file. Don't make a procedure file at all, just redirect the output for Dsave directly into Shell for immediate execution. Using our previous example, put the source disk in /d2 and the target disk in /d0, and type the following:

```
OS9:chx /d2/cmdu
OS9:chd /d2
OS9:dsave -s20 /d2 /d0 ! shell
```

Everything is the same in this second example except that >/d2/makecopy is replaced by ! shell. The "!" is the set of pipe commands that routes the standard output of the foregoing process into the standard input of the following process. Look at page 6-41 in your Level II manual and circle the short paragraph that covers this, since you will certainly want to find it quickly in the future. When you type Dir, you get a listing on the screen of the names of the modules and directories in your current data directory. However, if you type Dir e, you will get that listing in much greater detail, including the date and time the file was saved, attributes of the file, the starting sector on the disk and the byte-count of the file. Well, the byte-count of *this* file has gotten large enough that I had better quit for this month.

My next column will cover the DS9Gen and Config processes for making a boot disk. We will also discuss the infamous, unsolvable, Level II boot order problem that has totally confounded all the experts since Level II for the CoCo 3 first came out. I will leave you pondering this enigma until next month.

## FILE TRANSFER UTILITIES

You asked for it at the Chicago RainbowFest.

### FILE TRANSFER UTILITIES NOW HANDLE RSDOS DISKS!

Need to transfer text files to and from PC (MSDOS), RSDOS and FLEX disks into your CoCo (OS-9) system? Have text files on a PC (MSDOS) system at work and want to work on them at home on your CoCo?

With GSC File Transfer Utilities you just place the PC (MSDOS), RSDOS or FLEX disk into your CoCo disk drive - enter a simple command and the file is copied into a CoCo OS-9 file. File transfer back to PC (MSDOS), RSDOS and FLEX disks is just as simple.

|          |                        |           |                           |
|----------|------------------------|-----------|---------------------------|
| PCDIR    | directory of PC disk   | RSDIR     | directory of RSDOS disk   |
| PCDUMP   | display PC disk sector | RSDUMP    | display RSDOS disk sector |
| PCREAD   | read PC file           | RSREAD    | read file from RSDOS disk |
| PCWRITE  | write file to PC disk  | RSWRITE   | write file to RSDOS disk  |
| PCRENAME | rename PC file         | FLEXDIR   | directory of FLEX disk    |
| PCDELETE | delete PC file         | FLEXDUMP  | display FLEX disk sector  |
| PCFORMAT | format PC disk         | FLEXREAD  | read FLEX file            |
|          |                        | FLEXWRITE | write file to FLEX disk   |

**Extensive Options** Single, double sided disks, 40 or 80 track floppy drives. 8 or 9 sectors. First level sub-directories - PC (MSDOS). FLEX transfers binary files also.

**Requires** OS-9 (Level 2 for MultiVue), 2 drives (one can be hard), MultiVue for MultiVue version, SDISK (SDISK3 for MultiVue) - see D.P. Johnson ad for SDISK

GSC File Transfer Utilities for CoCo - MultiVue version \$54.95

GSC File Transfer Utilities for CoCo - Standard version \$44.95

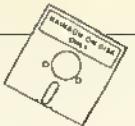

All diskettes are CoCo OS-9 format. Orders must be prepaid or COD, VISA/MC accepted, add \$1.50 S&H, additional charge for COD.

# Installation, Automation and More

By Dale L. Puckett  
Rainbow Contributing Editor

**N**ovember is a good time to start some serious programming. I hope that this month's interview will help you get more enjoyment out of those long sessions with your CoCo.

#### CCEnv

Allow me to introduce a man who got tired of the complicated and redundant process required to compile C programs — and did something about it. Chris Fox has been programming since 1978 when someone gave him a Casio calculator that spoke BASIC. He started working with C four years later.

Fox bought a CoCo 2 with 16K of memory because he wanted to work with graphics and color. (It was also one of the only computers on the market he could afford.) He learned a lot with his CoCo 2, but he wanted to learn more. When OS-9 came out in 1983, he had to have it. When the Microware C compiler came out, he had to have that, too. The compiler was Fox's first experience with C language, and it took him a long time to learn the language and use the compiler. He explained: "I didn't have a second disk drive and didn't know I needed it. I really got things moving when I caught on and started

using a RAM disk to compile my C programs. The RAM disk worked so well for me that I made it an automatic feature in *CCEnv*."

Fox wrote *CCEnv* because he was tired of the long directory names and command line options used to run the OS-9 text editor. *CCEnv* eliminated these length requirements.

Yet, *CCEnv* works with almost all OS-9 languages. You can run your Pascal compiler with it — or use it to assemble programs written for ASM or RMA. The *CCEnv* manual pages will even clip into your *Multi-Vue* manual.

An intelligent project manager is built into the program. "It's a graphics Make," Fox said. "It checks the date. If a text file has been updated, it's recompiled. If you have enabled the project option, *CCEnv* links to any relocatable object code you have written during the programming project. It automatically uses the startup code in *CStart.r* and the standard library, so you can split your programming projects into segments."

Fox's company, Foxware, sells a graphics library that works with CLink in the original C compiler package and a C math library. Fox also offers a BASIC09 math library, and a BASIC09 mouse and menu library that help you create mouse-driven applications with pull-down menus. The latter contains many routines similar to the *Gfx3* package published in last month's column.

The Foxware graphics library includes a function that returns a pointer

to the device name string. This makes it easier to use redirection from within your own program. While you can issue a fork call without the *devname* function, you can't redirect any output. To do that, you must know the name of the device receiving the output, not just the path number. *Devname* enables dynamic redirection — you can find an available window and redirect output to it immediately. The graphics library also includes a function that calls the device /w and returns the path number for you.

Essentially, *CCEnv* is a graphics driver for OS-9 compilers and assemblers, which lets you issue commands with a mouse-and-menu and eliminates long command lines. It also remembers compiler options and keeps track of your directories.

Chris Fox guarantees that there will be at least one less manual open on your lap when you use *CCEnv* to program. Fox used the Microware C compiler for more than a year before he tried *Turbo C* (one of the most convenient MS-DOS C compilers). He was struck by the ease of program development and determined to develop something similar for the CoCo 3.

Although Fox bought an IBM-compatible computer and intended to move on to the more sophisticated PC, it never happened. Fox explained, "After investing a few months to learn DOS, I realized that OS-9 is a superb operating system. I preferred the CoCo 3." Fox now uses his Tandy 1000 TX almost solely as a terminal for his CoCo 3 when he runs OS-9 Level 2.

---

Dale L. Puckett, a freelance writer and programmer, serves as director-at-large of the OS-9 Users Group and is a member of the Computer Press Association. His username on Delphi is DALEP; on packet-radio, KOHYD @ N4QQ; on GENIE, D.PUCKETT2; and on CIS, 71446.736.

After working on *CCEnv* for a few months, Fox began to use the half-finished program to complete itself. "The results were so pleasing that I decided to generalize *CCEnv* so it could run all OS-9 compilers and assemblers," he said. Fox also realized that this program, which had been developed for his own convenience, would be useful for other programmers as well.

## Equipment

To run *CCEnv*, you'll need OS-9 Level II and the *WindInt* system module that comes with *Multi-Vue*. The program runs under *Multi-Vue* but can be run independently if *WindInt* is in your *OS9Boot* file. You will also need a mouse and 512K of memory. Compiling a program on the CoCo 3 without a RAM disk is a slow process. Therefore, *CCEnv* automatically writes all temporary files to the drive, */r0*, if it is available. If that driver is not available, the program will prompt you for a drive name or directory. *CCEnv* will remember this location in its environment file, so you won't need to type it again until you want to change directories.

You must also supply your own OS-9 compiler, assembler and text editor. *CCEnv* is pre-configured for the Microware C compiler but works well with Pascal, ASM, RMA and C-ASM. The *CCEnv* edit menu offers four text editors: *Edit*, *Scred*, *TSEdit* from Tandy and *Xed* from MicroTech Consultants. If you don't own one of these, a fifth menu entry lets you specify your own editor.

To run *CCEnv*, copy two files to your OS-9 system disk. *CCEnv* goes in your CMDS directory. *Env\_ccenv* goes in */DD/SYS*. Make sure that any programs *CCEnv* will use are also in your CMDS directory. For example, the editor you plan to call from the menu and all the

files in the Microware C compiler (except *ccl*) must be in CMDS. Additionally, you'll need the utilities you use during a programming session: *Attr*, *Dump*, *Debug*, *Verify* and *Tmode*.

If you would rather not clutter your CMDS directory, create a special directory for *CCEnv*, load it with your compiler files, editor and utilities, and change your current execution directory to the special *CCEnv* directory. You can do this before you run the program or from within the program itself; however, include the *StdPtrs* and *StdFonts* files in your */dd/SYS* directory.

If you look in your modules directory after loading *CCEnv*, you'll see two new modules — *CCEnv* and *ShellCmd*. Run *CCEnv* by typing:

*CCEnv pathlist options...*

When *CCEnv* sees a hyphen, it knows that it has found an option. Otherwise, it treats a name on your command line as a pathlist to the file you want to compile or assemble. *CCEnv* uses the data directory holding the file you are compiling as its current data directory. Here's a typical *CCEnv* command line.

*CCEnv filename -v*

Type this line when you want to run a single session to compile an existing C or assembly program. To configure *CCEnv* to run OS-9 Development Kit assembler, type:

*CCEnv -a -l -x=startup.a  
-z=stdlib.asm -v=env.assm*

When you type this line, *CCEnv* uses RMA to assemble your file and RLINK to link your object code. The program substitutes the assembly startup code

for *CStart.r* and the standard library for *CLib\_1*, and it saves the options you typed in an environment file, *-Env.assm*. The next time you want to work with your assembler, just type:

*CCEnv -v=env.assm*

You can save as many environment files as you like. In fact, you can keep one for each program you develop. (*CCEnv* will automatically keep track of the libraries and other relocatable modules needed for each project.) Store these environment files in your */dd/SYS* directory.

## Menus

You'll find six menus on *CCEnv*'s main menu bar — Close (a square box), File, Edit, Run, Compile and Option. If you are working with a binary file — a file with an *.r* or no extension — you'll notice that a Module menu replaces the Edit menu. From this menu, you can *Debug* or *Attr* your object code file.

Pop-up menus ask you for information when it's needed. For example, if you name a file with an unrecognized extension, you'll be asked to identify its type. Generally, a pop-up menu will ask Yes or No questions. If *CCEnv* needs a longer answer, it will request the answer in a dialog-box. Essentially, this is the only time you'll use your keyboard while running *CCEnv*. The rest of the time you can just click the mouse. For example, if your compiler runs into an error, you'll find out about it in a message box. After you read the note, click the mouse and the message box disappears. Inappropriate menus are disabled. Thus, if you have not picked a file to edit, the Edit, Run and Compile menus will be disabled.

The File menu allows the following options: Load a file. (You may choose

# THE BEST COCO ASSEMBLY LANGUAGE PROGRAMMING BOOKS IN PRINT

"Assembly Language Programming for the CoCo" (The Book) and the CoCo 3 (The Addendum). Professionally produced (not just skimpy technical specifications). THE CoCo reference books.

**THE BOOK** - 289 pages of teaching assembly language for the CoCo 1 & 2. It's used as a school text and is an intro to Computer Science. It describes the 6809E instructions, subroutines, interrupts, stacks, programming philosophy, and many examples. Also covered are PIAs, VDG, SAM, kbd, joystick, sound, serial port, and using cassette and disk. \$18.00 + \$1.50 s/h.

**THE ADDENDUM** - Picks up where the BOOK left off. Describes ALL the CoCo 3 enhancements & how to use them with assembly language. The most complete GIME spec. WOW - Super-Res Graphics, Virtual Memory, New Interrupts, and more information not available elsewhere. Find out what the CoCo 3 can really do. \$12.00 + \$1.00 s/h.

### COCO 3 SPECIAL

Start your CoCo library right. See what the CoCo can really do and save money - buy the BOOK and ADDENDUM for only \$27.00 + \$2.00 s/h.

US check or money order. RI orders add 6% sales tax

**TEPCO**

Portsmouth, RI 02871

See Us On DELPHI!

any available in the present environment.) Abandon the file you are using. Count the characters, words and lines in a file, or check its syntax. Start an OS-9 Shell on another screen, or exit *CCEnv*. The Edit menu lets you select the editor to be used for a session. If you receive an error message during an assembler or compiler run, a two-window screen will appear on your CoCo. The possible error messages will appear in the six-row window at the bottom of the screen. You can then use them to correct the file in the top window. (This is certainly better than relying on my short memory.)

The Run menu runs the program you just compiled. If the file hasn't been compiled or assembled, *CCEnv* will do this for you and then run the program. This menu will compile, assemble, link and run a program with *one* mouse click.

The Compiler menu gives you four choices:

- To Assembly generates an assembly language file after compiling your C source code.
- To Object converts your assembler, or C source code, to a relocatable object code file with an .r extension.
- To Executable takes your C (assembly, or relocatable object) code file and produces an executable module, linking the new object code to other relocatable code listed in your link list. The file created is automatically stored in your execution directory.
- To Cancel lets you change your mind.

The Assembler, Compiler or Linker options from the options menu will show you *CCEnv*'s pull-down menus. Center the mouse over your selection and click the button. Without moving the mouse, you will now see a second menu. For example, if you click over the word Compiler, you'll be offered three choices in a pull-down menu: optimize defaults, check the 6809 stack, or run the C Profiler. You are presented similar choices when you click on Assembler, Linker, Link-List or Libraries.

*CCEnv* was created to make programming less tedious and more productive. It fills that bill nicely.

#### About Assemblers

I received an interesting note from Duane M. Perkins of Mount Gretna, Pa. He suggested that I point out the advantages of RMA — the Relocating Macro Assembler found in OS-9 Level

II's Software Development package — over ASM — OS-9 Level I's original assembler.

RMA's main advantage is that it creates object files that can be linked with others later. According to Perkins: "The ability to include assembled functions and subroutines in a module speeds up program development."

Perkins submitted two short — but interesting and useful — listings to make his point: *C1kSpd* and *C1kChk*. *C1kSpd*, used with one of your programs, determines the clock speed of your CoCo 3. This information is essential if your program uses timing loops and must ensure a correct delay interval. *C1kSpd* calls *C1kChk*, which determines whether the clock speed is fast or slow and then tells you through a printed message.

You cannot directly execute a file created by the RMA assembler. It must be linked before it is run. However, you can assemble any number of source code files independently and use your linker to create an executable module that includes all of them. The linker also lets you use libraries, which can contain

any number of independently assembled files. When you have finished this work with RMA, you will never have to do it again.

Some of the directives used in an RMA program are different than those used in an ASM program. For example, an RMA program uses *Psect* instead of *Mod* and *Endsect* instead of *Emod*. Another directive, *Csect*, marks the beginning of a data section and resets the base location counter for data offsets like ASM's directive, *Org*. In an RMA program, all data sections must end with an *Endsect* directive, and all *rmb* statements must be located in a *Csect*. Also, while your program may have any number of *Csects*, it can have only one *Psect*. Incidentally, RMA labels are case-sensitive. You'll need to be careful when typing the names of your subroutines and variables. Tandy supplies a file named *OS9Defs.a* that contains the standard OS-9 variables in the required *Csect* or *Endsect* format. Make sure that the labels used in your source code agree with the listing in this file — letter for letter.

The first module you link must con-

tain your main program with the module entry point. It must be assembled with a non-zero type/language code. Modules that you plan to link with this first module must have the type/language byte set to zero. Any location in your modules that you want to reference from another module must have a label ending with a colon. Thus, any variable name that ends with a colon will be recognized globally when you run your linker.

### Procedure Files

I was happy to hear about Gil Shattuck's File Transfer Utilities at RAINBOWfest Chicago. I was even happier when I received a copy of Gil's latest version, based on *Multi-Vue*. However, I was delighted when I put the disk in Drive */d0* and clicked on the *Multi-Vue* icon.

There were two procedure files on the disk from Granite Computer Systems, so I pointed to the first with the mouse and clicked to select it. I moved the pointer to the File menu and listed the file. It was an installation file. One of the procedure files Shattuck provides loads FTU from the GCS master disk to your system disk in Drive */d0*. The other procedure copies the files to the disk in Drive */h0*. I use */h0* and *GShell+* from the OS-9 Usrs Group, so I clicked on the second procedure file's icon and returned to the keyboard to write a few more sentences. While I worked, *GShell+* ran the procedure file. In a few minutes, Shattuck's FTU was installed.

The procedure file supplied by GCS moved the file, *AIF.ftu*, to my CMDS directory. When it had finished, I copied that file to the directory where I group my *AIF* files. I then clicked on the update bar (located just below the *Multi-Vue* menu bar) and, like magic, the FTU icon appeared on my screen. (I capitalize the letters "AIF" in my file names and use the *GShell+* sort routine so that the icons used with my most frequently run programs are placed at the top of the screen and sorted in alphabetical order. My CoCo 3 is turning into a dream computer.)

As soon as the FTU icon appeared, I clicked it on. A new screen with a pleasant border color and a standard *Multi-Vue* framed window with a five-item menu bar appeared on the screen. The standard Close box appears to the left of the menu, followed by a Quit menu that lets you exit FTU immediately. Three menus unique to FTU appeared to the right. These are PC

Transfer, RS-DOS Transfer and FLEX Transfer. I took an old FLEX disk and an MS-DOS disk and tried the different menus.

You may notice that I haven't mentioned the manual. That's because I haven't read it yet. I like to try software before I read the manual. The FTU manual is clear, complete, concise and quite useful. My only problem occurred because I had booted my CoCo 3 with an OS9Boot file containing CC3Disk instead of SDisk3, and GCS FTU requires Dan Johnson's SDisk3 package.

Shattuck has put a lot of thought into this utility package. For example, if you put a new FLEX, PC or Disk BASIC disk in Drive A and click on the appropriate menu title in the pull-down menu, a list of the files on that disk will appear instantly on your CoCo 3 screen. You can even ask for an extended directory listing that gives you the size and age of the files you might want to transfer.

One of the best features of this utility occurs when you are ready to read one of these foreign files. You just click on the proper menu title, move the pointer down and click on the "Read File" selection. FTU immediately presents a dialog box in the lower right hand corner of your screen, so you can type in any additional information it might need. Never fear, you won't need to remember a filename — or the file's extension — with this program. GCS leaves the directory listing on the screen so you can refer to it while you type the name of the file you want to transfer. The small dialog box doesn't get in the way at all. Nice job, Gil!

### Speaking of File Transfers . . .

Recently, Jane C. Sherratt of Omaha, Neb., who uses *VIP Database* and *VIP Calc* packages and has many ASCII files, wrote to ask how she could read these files into an OS-9 word processing package to avoid retyping all the numbers. Sherratt can use a package like GCS's File Transfer Utilities to move the files from her Disk BASIC disks to an OS-9 disk. Once she has the files stored on an OS-9 disk, she should be able to open them with most OS-9 editors and word processors. Many of them recognize tabs, so the formatting from her spreadsheets should stay intact. She may even be able to load the ASCII data from *VIP Calc* into *Dyna-Calc*.

Even straightforward BASIC programs — those that do not use commands unique to Color Computer

## TIMS Combo Special - Save 15%

Order The Information Management System (TIMS) Combo package described below for only \$29.95. This special is good through November 30, 1988.

### CALLIGRAPHER

**CoCo Calligrapher** - Turn your CoCo and dot-matrix printer into a calligrapher's quill. Make beautiful invitations, flyers, certificates, labels and more. Includes 3 fonts: *Gay Nineties*, *Old English* and *Cartoon*. The letters are  $\frac{1}{2}$  inch high and variably spaced. Works with many printers such as Epson, Gemini and Radio Shack. Additional fonts are available (see below). Tape/Disk; \$24.95.

**OS9 Calligrapher** - Prints all the same fonts as the CoCo Calligrapher. It reads a standard text file which contains text and formatting codes. You may specify the font to use, change fonts at any time, centering, left, right or full justify, line fill, margin, line width, page size, page break and indentation. Similar to *troff* on UNIX systems. Includes the same 3 fonts and additional fonts are available (see below). Disk only; OS9 Level I or II; \$24.95.

**Calligrapher Fonts** - Requires Calligrapher above. Each set on tape or disk; specify RSDOS or OS9 version; \$14.95 each. Set #1 (9 fonts) Reduced and reversed versions of Gay Nineties, Old English and Cartoon; Set #2 (8 fonts) Old Style and Broadway; Set #3 (8 fonts) Antique and Business; Set #4 (8 fonts) Wild West and Checkers; Set #5 (10 fonts) Stars, Hebrew and Victorian; Set #6 (8 fonts) Block and Computer; Set #7 (5 small fonts) Roman, Italics, Cubes, Digital and Old World. **NEW:** Set #10 (8 fonts) several Roman styles; Set #11 (10 fonts) Gothic and Script; Set #12 (10 fonts) more Roman and Italic.

**Economy Font Packages** on disk; specify RSDOS or OS9; \$29.95 each or \$59.95 for all three: **Font Package #1** - Above font sets 1, 2 and 3 (25 fonts). **Font Package #2** - Above font sets 4, 5 and 6 (26 fonts). **Font Package #4** (also known as the *Hershey fonts*) - Above font sets 10, 11 and 12 (28 fonts).

**Calligrapher Combo Package** - Includes the Calligrapher and Economy Font Packages #1 and #2, 54 fonts in all \$69.95, or \$84.90 to also include Package #4 (82 fonts).

### Sample Calligrapher Hershey Fonts

*The CoCo Calligrapher!*

**NEW! OS9 Font Massager** - This OS9 utility program allows you to do all sorts of things to Calligrapher font files. You may create new fonts, modify existing fonts, invert fonts, compress fonts, double the height and/or width, halve the height and/or width and convert between OS9 and RSDOS formats. \$19.95 (or only \$14.95 if ordered with any other *Calligrapher* item). A listing of the C source code for the Font Massager is available for an additional \$14.95.

### INFORMATION MGT.

**TIMS** (The Information Management System) - Tape or disk, fast and simple general data base program. Create files of records that can be quickly sorted, searched, deleted and updated. Powerful printer formatting. Up to 8 user fields, sort on up to 3 fields. Tape/Disk; \$19.95.

**TIMS Mail** - Tape or Disk based mailing list management program. Files are compatible with TIMS. Fast and simple to use. Supports labels 1, 2 or 3 across,  $\frac{1}{2}$  to 4 inches wide. Tape/Disk; \$19.95.

**TIMS Utility** - Utility companion for TIMS and TIMS Mail for multi-term search (AND and OR logic), global change and delete, split large files and more! Tape/Disk; \$14.95.

**TIMS Combo Package** - All three of the above programs: TIMS, TIMS Mail and TIMS Utility on one disk - \$34.95.

### EDUCATIONAL

**Trig Attack** - Ages 9 and up. An educational arcade game where players learn important math concepts as they play. Sound effects, colorful graphics. Excellent manual includes an introduction to trigonometry. Tape/Disk; \$19.95.

**The Educational Combo** - The Combo includes these educational (and entertaining) games: **Silly Syntax** (ages 5 and up) story creation game with 2 stories

**Galactic Hangman** (ages 7 and up) animated graphics, with a 700 word vocabulary

**The Presidents of the USA** (ages 10 and up) a presidential trivia game

**The Great USA** (ages 9 and up) a trivia game of the states

**Trig Attack** (ages 9 and up) Zap those Trigs

All five programs on one disk; \$49.95 (save \$50!).

### SPECIAL INTEREST

**Rental Property Income and Expense Management Package** - Maintain rental property income and expense records and print reports. 28 expense categories. This program may be tax deductible. Disk only; \$29.95.

**CoCo Knitter** - Easy to use program to display or print instructions to knit a sweater: Cardigan or Pullover; Round or V-neck; Raglan or Set-in Sleeve; 3 weights of yarn; 8 sizes from baby to man. Tape/Disk; \$19.95.

All programs run on the CoCo 1, 2 and 3, 32K Extended Basic, unless otherwise noted. Add \$1.50 per tape or disk for shipping and handling. Florida residents add 6% sales tax. COD orders add \$5. Dealer inquiries invited. Orders generally shipped in 2-48 hours. No refunds or exchanges without prior authorization.

### SUGAR SOFTWARE

P.O. Box 7446

Hollywood, Florida 33081

(305) 981-1241

BASIC — can be transferred over to an OS-9 file and run with BASIC09. To do this, make sure that you save the source code of your Disk BASIC file in ASCII. Before you attempt to load the file into BASIC09, however, use your favorite editor to insert the line:

PROCEDURE nameofprogram

at the front of your *Disk BASIC* program. (The 'P' must be the *first* character in the file.)

**"Error 221 means OS-9 couldn't locate the module requested, while Error 249 means the disk inserted in a drive isn't compatible with the drive's present configuration."**

### Getting Started With *Multi-Vue*

Melvin Grow in Alameda, Calif., wrote to ask for help in starting *Multi-Vue*. In its present format, he can't access his files in Drive 1. Having transferred all his OS-9 files to a 40-track disk, Grow finds *Multi-Vue* unfriendly, and wonders why Tandy used BuildMV instead of *Config* so that users could match their hardware configuration.

Grow reported receiving the infamous 221 and 249 errors. Let's look at those first. Error 221 means that OS-9 could not locate the module requested. Error 249 means that the disk inserted in a drive is not compatible with the present configuration of the drive (i.e., you would get Error 249 if you inserted a double-sided disk in a drive with its device descriptor configured for single-sided disks. My hardware setup is also a hybrid and would not work with BuildMV. When I couldn't run BuildMV the first time, I just installed *Multi-Vue* myself. Grow may also find this approach simpler. To see if we can solve his problem, however, let's look at BuildMV.

To begin, the procedure file saves most of the modules that it expects in your OS-9 Level 11 boot file to a MODULES directory. This directory is on the reverse side of the *Multi-Vue* release disk from Tandy. Mount this disk in Drive 1d0.

```

Next, BuildMV prompts you to copy the modules term.wind.dt and CC3go from the MODULES directory on your OS-9 *Config* disk to the MODULES directory on the reverse side of the *Multi-Vue* release disk. When this is complete, BuildMV copies the GrfDrv file from your original OS-9 system disk to the CMDS directory on the reverse side of the *Multi-Vue* release disk.

After it moves the files, BuildMV changes its current data directory to the MODULES directory and runs the DS9Gen utility to create a new DS9Boot file.

The procedure file is complicated by several factors. First, BuildMV expects you to copy to a single disk, using only Drive /d0. Second, it expects to find the needed modules in your DS9Boot file. If you have a hybrid system, this may not be the case, and you will receive the Error 221 message.

Evidently, Grow also received an Error 249 message when he tried to copy the files from his double-sided disk, which the procedure file had instructed him to mount in Drive /d0. Since *Multi-Vue* instructed him to boot with his original OS-9 system disk, he was running a single-sided device descriptor in Drive /d0 that could not read the double-sided disk containing the files. Therefore, he received an Error 249.

I will now attempt to make *Multi-Vue*'s installation process easier to understand. Start by listing the MODULES and CMDS directories on the reverse side of the *Multi-Vue* release disk (the side the instructions tell you to use). In the MODULES directory you'll find a HELP directory, a WindInt.i0 module, eight new window device descriptors and a file named Bootlist.mv.

Because you use the bootlist file to tell DS9Gen which modules you want in your new DS9Boot file, we'll need to look at that file as well. When Bootlist.mv is listed, it will instruct DS9Gen to use the files that BuildMV attempted to save for you, as well as the modules on the reverse side of the *Multi-Vue* release disk, in the MODULES directory.

You will need to copy the CC3go module from the MODULES directory on your *Config* disk because the copy in memory is marked busy and cannot be saved with the OS-9 save command. If you try, you will receive an Error 209, or "Module Busy," message. Copy term-wind.dt from the *Config* disk as well because it does not exist in the DS9Boot file of the standard OS-9 Level II release disk, which BuildMV expects you to use.

After looking at this procedure, you may feel that things should not be this complicated. They aren't. To run *Multi-Vue* you only need to remove the *Grlint* module from the OS9Boot file and replace it with the *WindInt.lo* module that comes with *Multi-Vue*, add the *Term-wind.dt* window device descriptor and the new window device descriptors */w8* through */w12* to the OS9Boot file, and keep the modules already in the OS9Boot file that work

**"After you save the modules from your own OS9-Boot file, copy the new module files from the MODULES directory on the reverse side of the Multi-Vue release disk to the directory on your freshly formatted disk."**

with your hardware. In other words, start by formatting a fresh disk, Create a MODULES directory on this disk with the OS-9 *mkdir* utility, and save all the modules in your present OS9Boot file, except *grfdrv*, in the MODULES directory. Next, either create a procedure file of Save command lines (like those in *BuildMV*) with the build utility or your favorite editor, or just copy them one at a time from the keyboard.

After you save the modules from your own OS9Boot file, copy the new module files from the MODULES directory on the reverse side of the *Multi-Vue* release disk to the directory on your freshly formatted disk. Again, you can either create a procedure file to do this for you, or copy them one by one from the keyboard. Do whatever is easier for you. You must also copy the *Term-wind.dt* and *CC3go* modules to your MODULES directory.

Next, create a *Bootlist.mv* file in that directory, using either the build utility or your editor. That bootlist should include both the names of each module you saved earlier and the modules copied from the *Multi-Vue* release disk and the OS-9 Config disk.

Now run *OS9Gen* and create your new OS9Boot file. If you mounted your new disk in Drive */d1* and are running from an execution directory in a disk

```

mounted in Drive /d0, just type the following command line and enter to finish the job:

```
os9gen /d1 <bootlist.mv
```

When OS9Gen finishes, you'll have a new OS9Boot. Now, create a CMDS directory on your new disk and copy the Shell and GrfDrv files from the CMDS directory on the disk you had been using. If you want to run *Multi-Vue* immediately upon startup, add to your new CMDSdirectory the new files supplied in the CMDS directory on the front side of the *Multi-Vue* release disk, along with the AutoEx and MultiStart files from the directory on the back of that disk.

You can also boot up from the disk you just made if both Shell and GrfDrv are on its CMDS directory. You can then remove that disk and mount the system disk you normally use. After you put your old disk in the drive, type the following:

```
chd /d0 and chx /d0/cmbs
```

to switch your current directories to it. To run *Multi-Vue* from your disk, copy the new *Multi-Vue* files for the CMDS directories on both sides of the *Multi-Vue* release disk into your own CMDS directory. To start *Multi-Vue* from your disk, just type "multistart".

I hope I've taken some of the mystery out of *Multi-Vue*'s installation process.

## Our Listings

You'll find the source for C1kSpd and C1kChk, additional code with liberal comments for *MVShell* and another handy utility from Stephen Goldberg in this issue. Goldberg's *Strip* removes any leading or trailing spaces from your text files to save space on your disk. The command lines look like this:

```
strip myfile
strip 8 myfile
strip +30 myfile
strip -10 myfile
```

The first line removes all leading spaces from each line. The second strips eight characters from each line. The next strips all characters past column 30, and the last strips the last 10 characters from each line. *Strip*, another fine example of OS-9 assembly language programming, certainly beats editing each line.

That's it for this month. Until next month, keep on hacking! □

## Christmas SALE

**NEW LOWER PRICES!!**

### CoCo Burke & Burke Hard Drive Kits

**FLASH! More Burke and Burke systems have been bought in the last six months than other systems have sold in the last 3 years, WITH NO RETURNS!!!**

Our first system features the Burke & Burke XT or XT RTC interface. This interface uses popular and inexpensive IBM PC type controllers. For this reason it is the least expensive hard disk system available today. Not as fast as the Istd system but faster than any other system available. It also supports RLL drives. Note: Disk Extended Color Basic support and other software options are listed on our price list.

Disadvantage: requires a multi-pak.

KIT INCLUDES: Burke & Burke (B&B) XT PC interface, Hard drive with controller, 3 foot ST506 cable set, Hard Drive Case with 60 watt power supply and fan. Includes OS9 LI and LII software. 1 megabyte transfer in 45 seconds! Type ahead under OS9. Complete instructions. Easy one evening assembly.

### 1 YEAR WARRANTY ON ALL SYSTEMS!

(Bare drives, requires case and power supply \$75.00)

### CoCo FHL High Speed Hard Drive Kits

Our top of the line system features Bruce Isted's interface for the Western Digital WD 1002-05 high speed controller. Features: fastest system available, 1 megabyte transfer in only 37 seconds!! Twice as fast as other systems! Supports 4 floppy and 3 hard drives, type ahead for both floppy and hard disk, autoboot OS9 L1 or L2 from hard or floppy disk. Disadvantage: does not support DECB. This is the system of choice for the serious OS9 user.

KIT INCLUDES: FHL HCA/WD High Speed interface, Hard drive with WD 1002-05 controller, ST506 cable set, 4 foot 40 pin cable, Hard Drive Case with 60 watt power supply and fan. OS9 software for LI and LII with source. Complete instructions. Easy one evening assembly.

(INTERFACE SPECIFICATIONS: Size is the same as a floppy controller. Interfaces the WD 1002-05 controller to the CoCo. This controller handles 3 hard and 4 floppy drives. Type ahead under OS9 for both floppy and hard drive. Includes OS9 LI and LII software with source. Autoboot ROM included to boot from floppy or hard drive. Supports OS9 only unless you use R.S.B.. 1 megabyte transfer in 37 seconds!)

## OS9 Software Christmas SALE

### The WIZ

by Bill Brady

Did you ever wonder why there is only one really good communications package for OS9? The WIZ is so good that no one has been able to better it in over a year on the market! Simply the best package there is for OS9 and the CoCo III.

FEATURES: Mac-Like interface with windows, text and binary upload/download with xmodem, kermit, on line HELP, AUTOLOGGING lets you dial up and log on to your favorite service, Macros, VT52 emulation, Usage log and much more.

The Wiz requires a RS232 Pak or similar device, LII and 512K. Supports the Owl-Ware Super I/O board.

### NEW PRODUCT!

#### Midget 24

#### 2400 Baud Modem - 5 Year Warranty

300/1200/2400 baud, Hayes compatible, Non-Volatile Memory (RAM) Automatic Adaptive Equalization (Error Free Transmission) 5 YEAR LIMITED WARRANTY!! Perhaps the last modem you will ever have to buy! (Well... for 5 years anyway!)

Christmas SPECIAL ONLY 195.00

### DynaStar

Used by more OS9 users than any other!

FEATURES: Best OS9 editor/word processor/text formatter, has everything you would expect and more, supports terminals and windows simultaneously, auto-configurable, auto-indent for C and Pascal programming, mail merge for form letters, bug free, solid. New manual makes it easier to use than ever. Most popular word processor since 1982! Uses CoCo 3's windows for pop-up help menus, can be disabled. Two key sequence to move from anywhere to anywhere in your text, WordStar command style. Will work with files larger than memory. Merge function allows stringing many files together at print time. Full block manipulation, mark, move, copy, delete, read from disk, write to disk. Keyboard Macros: Define or redefine any control key (up to 29) to reproduce any key sequences, including commands! Macros can be read in at startup automatically or created on the fly as needed. Printer Control: Supports multiple printers via a print control file that transforms imbedded control characters to printer control characters. Changing printers is easy. Formating Commands: Justification, word wrap, centering, headers, footers, macros, odd and even support, multiple index generation, multiple table of contents generation and more! DynaStar is the last word processor you will ever have to buy! Level I version also included on disk.

DynaStar word processor/formatter

*

```

## BASIC UTILITY DISKETTE

A real time saver for the person who develops software using COCO Basic.

- DUMPDIR: Prints a hard copy of a disk's directory. No more searching one disk after another looking for a lost file.
- DUMPCRT: Copies text from the screen to the printer. Versions included for 40 and 80 column COCO 3 text screens.
- DUMPFIL: Dumps any disk file to the printer. Printout can be in either decimal or in hex values.
- CROSSREF: Prints cross reference of source and destination line numbers for basic jump instructions (GOTO, GOSUB, etc.).
- COMPARE: Reads two BASIC Programs from diskette and compares them line by line. Lists all lines that are not identical.

Requires COCO 2 or 3, disk and printer.

Order at \$19.95 plus \$2 p&h.  
Calif. residents add \$1.20 tax.

## HD-1 Sale Extended

### DC-5 CONTROLLER

from Hard Drive Specialist gives great Radio Shack compatibility and double sided access to DSDD Drives like Howard's DD-3. Two ROM sockets, one 24 pin and one 28 pin allows use of RS 1.1 ROM by jumper selection. Gold plated contacts reduce I/O Errors. \$75 (\$2 Shipping)

### RS DOS ROM CHIP

ROM chip fits inside disk controller. 24 pin fits both J&M and RS controller. Release 1.1 For CoCo 3 Compatibility. \$25 each Reg. \$40 (\$2 shipping)

**NEW FROM DISTO \$129** DC6 (\$2 Shipping) Super Controller II works with CoCo 1, 2 & 3. It buffers keyboard input so that no keystrokes

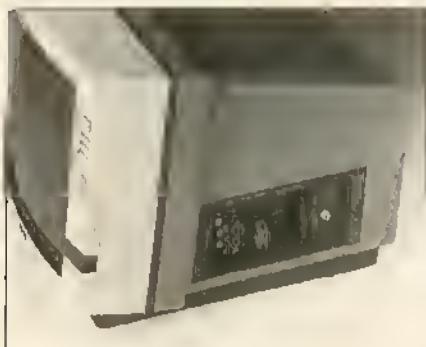

are lost when disk is reading or writing. Especially useful with OS-9, but also works with BASIC.

### MONITOR

**Sony KV-1311CR \$499**

Regular \$625 (\$15 shipping)

- Vivid Color • Vertically flat 13" screen • Monitor/Trinitron TV with remote control • 640 × 240 resolution at 15MHZ .37 mm Dot pitch
- RGB analog & digital; TTL; and composite inputs • VCR inputs
- Cable to CoCo 3 \$36

### HARD DRIVE ACCESSORIES

**3' Hard Drive Cable \$20**

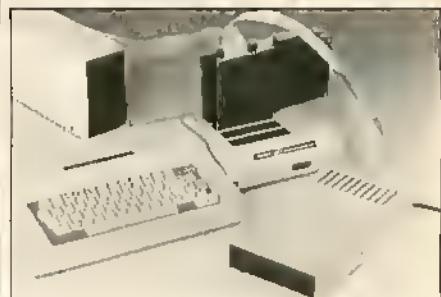

**Clock Upgrade \$20**

**Burke & Burke Interface**

**RSB \$39.95**

**TEAC 55B \$118**

**Hard Drive ROM Boot \$20**

### Hard Drive—Ready to Run!

20,000,000 Bytes or the equivalent to a 125 R.S. 501's on line are packed into this hard drive, pre installed and ready to run. All you need to do is plug it in and go! This complete easy to use package includes a Seagate 20 Meg Hard Drive, a Western Digital WD 1002-WX 1 Controller and interface\* that plugs into slot #3 of multipack interface, plus the case & power supply. You even get a 1 year warranty. This 20 meg Hard Drive will work with IBM & clone. Basic driver, \$29.95, lets you access this hard drive without need for OS-9.

**"Guarantee" As good as Gold.**

Howard Medical's 30-day guarantee is meant to eliminate the uncertainty of dealing with a company through the mail. Once you receive our hardware, try it out; test it for compatibility. If you're not happy with it for

any reason, return it in 30 days and we'll give you your money back (less shipping.) Shipping charges are for 48 states. APO, Canada and Puerto Rico orders are higher.

## Dear Friends,

Thank you 1988 marks our fifth year of providing quality software for the Color computer. Only your support has made it possible. So, from our hearts, Peg and I thank you. And remember our promise--if you buy it from us, we support it. If you are unhappy for any reason, send it back for a full refund within 30 days of purchase.

## Pyramix

This fascinating CoCo 3 game continues to be one of our best sellers. Pyramix is 100% machine language written exclusively to take advantage of all the power in your 128K CoCo 3. The Colors are brilliant, the graphics sharp, the action fast. Written by Jordon Tavetkoff and a product of Color-Venture.

## The Freedom Series

### Vocal Freedom

I've got to admit, this is one nifty computer program. Vocal Freedom turns your computer into a digital voice or sound recorder. The optional **Hacker's Pac** lets you incorporate voices or sounds that you record into your own BASIC or ML programs. This is not a synthesizer. Sounds are digitized directly into computer memory so that voices or sound effects sound very natural. One "off-the-shelf" application for Vocal Freedom is an automatic message-minder. Record a message for your family into memory. Set Vocal Freedom on automatic. When Vocal Freedom "hears" any noise in the room, it

## Dr. Preble's Programs

For Color Computer Software  
since 1983

plays the pre-recorded message! Disk operations are supported. VF also tests memory to take advantage of from 64K up to a full 512K. Requires low cost amplifier (RS cat. #277-1008) and any microphone.

### Mental Freedom

Would your friends be impressed if your computer could read their minds? Mental Freedom uses the techniques of Biofeedback to control video game action on the screen. Telekinesis? Yes, you control the action with your thoughts and emotions. And, oh yea, it talks in a perfectly natural voice without using a speech synthesizer! Requires Radio Shack's low cost Biofeedback monitor, Cat #63-675

### BASIC Freedom

Do you ever type in BASIC programs--manually, I mean. If you do, you know it can be a real chore. Basic Freedom changes all that. It gives you a full screen editor just like a word processor, but for BASIC programs. Once loaded in, it is always on-line. It hides invisibly until you call it forth with a single keypress! This program is a must for programmers or anyone who types in programs. By Chris Babcock and a product of Color-Venture.

### Lightning Series

These three utilities give real power to your CoCo 3.

### Ramdisk Lightning

This is the best Ramdisk available. It lets you have up to 4 mechanical disk drives and 2 Ram drives on-line and is fully compatible with our printer spooler below.

### Printer Lightning

Load it and forget it--except for the versatility it gives you. Never wait for your printer again! Printer runs at high speed while you continue to work at the keyboard!

### Backup Lightning

This utility requires 512K. Reads your master disk once and then

makes superfast multiple disk backups on all your drives! No need to format blank disks first! Supports 35, 40 or 80 track drives.

## Prices

### CoCo 3 only

|                              |         |

## ***Speed Racer***

As the checkered flag drops your pulse rises in this lively arcade game. The road twists to the horizon on the 3-D panorama that sets the stage for exciting racing. Vie for time as you glide through the curves at incredible speeds. Step through the gears to stay ahead of the pack, but be quick! Some will stop at nothing to see the end of the race, or the end of you! Four challenging raceways, complete with obstacles and colorful 3-D scenery test your skills in this Pole Position™ type game.

32K Color Computer required...\$34.95

## ***Pinball Factory***

Video games come full circle in this tribute to the original arcade game, *Pinball*. Classic pinball springs to life as never before, with fresh new angles that only a computer can offer. Crisp graphics, sound, and fast smooth action give this machine-language arcade game a realistic, responsive feel you'll hardly believe. There are even "tilt" buttons that let you "bump" the machine. In addition to playing a great game of pinball, you can enjoy hours of creative pleasure as you design, build, and play your own screens.

64K Color Computer required...\$34.95

## ***Demon Seed***

The first waves of flying, diving, bloodthirsty bats are arriving. Move, fire, and move again. It's a never ending battle. If you are lucky enough to defeat the bats, be ready for a much greater challenge, The *Evil Demons* themselves. Destroy a wing and another takes its place. Only a direct hit can save you now. It will take great skill to triumph. If you do, then you better be ready for the *End*. The Demon Flag Ship descends to destroy your remaining ships. Your only hope is to penetrate the hull, break through the shield, and destroy the dreaded Gargoyle.

32K Color Computer required...\$19.95
